

# The `hologo` package

Heiko Oberdiek\*

2017/05/01 v1.13

## Abstract

This package starts a collection of logos with support for bookmarks strings.

# 1 Documentation

## 1.1 Logo macros

`\hologo {<name>}`

Macro `\hologo` sets the logo with name `<name>`. The following table shows the supported names.

name	variant	logo	since
(La)TeX		(L <sup>A</sup> )T <sub>E</sub> X	2011/10/01
AmSLaTeX		$\mathcal{A}\mathcal{M}\mathcal{S}$ -L <sup>A</sup> T <sub>E</sub> X	2010/04/16
AmSTeX		$\mathcal{A}\mathcal{M}\mathcal{S}$ -T <sub>E</sub> X	2010/04/16
biber		biber	2011/10/01
BibTeX		BibT <sub>E</sub> X	2011/10/01
BibTeX	sf	BibT <sub>E</sub> X	2011/10/01
BibTeX	sc	BibT <sub>E</sub> X	2011/10/01
BibTeX8		BibT <sub>E</sub> X8	2011/11/22
ConTeXt		ConT <sub>E</sub> Xt	2011/03/25
ConTeXt	narrow	ConT <sub>E</sub> Xt	2011/03/25
ConTeXt	simple	ConT <sub>E</sub> Xt	2011/03/25
emTeX		emT <sub>E</sub> X	2010/04/26
eTeX		$\varepsilon$ -T <sub>E</sub> X	2010/04/08
ExTeX		$\varepsilon_X$ T <sub>E</sub> X	2011/10/01
HanTheThanh		Hàn Thế Thành	2011/11/29

`\Hologo {⟨name⟩}`

Macro `\Hologo` starts the logo  $\langle name \rangle$  with an uppercase letter. As an exception small greek letters are not converted to uppercase. Examples, see  $\varepsilon$ -T<sub>EX</sub> and  $\varepsilon_X$ T<sub>EX</sub>.

## 1.2 Setup macros

The package does not support package options, but the following setup macros can be used to set options.

`\holoLogoSetup {⟨key value list⟩}`

Macro `\holoLogoSetup` sets global options.

`\holoLogoSetup {⟨logo⟩} {⟨key value list⟩}`

Some options can also be used to configure a logo. These settings take precedence over global option settings.

## 1.3 Options

There are boolean and string options:

**Boolean option:** It takes `true` or `false` as value. If the value is omitted, then `true` is used.

**String option:** A value must be given as string. (But the string might be empty.)

The following options can be used both in `\hologoSetup` and `\hologoLogoSetup`:

**break:** enables or disables line breaks inside the logo. This setting is refined by options `hyphenbreak`, `spacebreak` or `discretionarybreak`. Default is `false`.

**hyphenbreak:** enables or disables the line break right after the hyphen character.

**spacebreak:** enables or disables line breaks at space characters.

**discretionarybreak:** enables or disables line breaks at hyphenation points (inserted by `\-`).

Macro `\hologoLogoSetup` also knows:

**variant:** This is a string option. It specifies a variant of a logo that must exist. An empty string selects the package default variant.

Example:

```
\hologoSetup{break=false}
\hologoLogoSetup{plainTeX}{variant=hyphen,hyphenbreak}
Then “plain-TeX” contains one break point after the hyphen.
```

## 1.4 Driver options

Sometimes graphical operations are needed to construct some glyphs (e.g.  $\text{X}\_{\text{f}}\text{TeX}$ ). If package `graphics` or package `pgf` are found, then the macros are taken from there. Otherwise the package defines its own operations and therefore needs the driver information. Many drivers are detected automatically (`pdfTeX`/`LuaTeX` in PDF mode, `XfTeX`, `VTeX`). These have precedence over a driver option. The driver can be given as package option or using `\hologoDriverSetup`. The following list contains the recognized driver options:

- `pdftex`, `luatex`
- `dvipdfm`, `dvipdfmx`
- `dvips`, `dvipsone`, `xdvi`
- `xetex`
- `vtex`

The left driver of a line is the driver name that is used internally. The following names are aliases for drivers that use the same method. Therefore the entry in the `.log` file for the used driver prints the internally used driver name.

**driverfallback:** This option expects a driver that is used, if the driver could not be detected automatically.

<code>\hologoDriverSetup {(<i>driver option</i>)}</code>
--

The driver can also be configured after package loading using `\hologoDriverSetup`, also the way for plain `TeX` to setup the driver.

## 1.5 Font setup

Some logos require a special font, but should also be usable by plain  $\text{\TeX}$ . Therefore the package provides some ways to influence the font settings. The options below take font settings as values. Both font commands such as  $\text{\sf}$  and macros that take one argument like  $\text{\textsf}$  can be used.

$\text{\hologoFontSetup}$   $\{\langle key\ value\ list\rangle\}$

Macro  $\text{\hologoFontSetup}$  sets the fonts for all logos. Supported keys:

**general:** This font is used for all logos. The default is empty. That means no special font is used.

**bibsf:** This font is used for  $\text{\BibTeX}$  with variant  $\text{\sf}$ .

**rm:** This font is a serif font. It is used for  $\text{\varepsilon_XTeX}$ .

**sc:** This font specifies a small caps font. It is used for  $\text{\BibTeX}$  with variant  $\text{\sc}$ .

**sf:** This font specifies a sans serif font. The default is  $\text{\sf}$ , then  $\text{\sf}$  is tried. Otherwise a warning is given. It is used by KOMA-Script.

**sy:** This is the font for math symbols (e.g.  $\text{\cmt}$ ). It is used by  $\mathcal{M}\mathcal{S}$ ,  $\mathcal{N}\mathcal{S}$ ,  $\text{\varepsilon_XTeX}$ .

**logo:** METAFONT and METAPOST are using that font. In  $\text{\LaTeX}$   $\text{\logofamily}$  is used and the definitions of package  $\text{\mflogo}$  are used if the package is not loaded. Otherwise the  $\text{\tenlogo}$  is used and defined if it does not already exists.

$\text{\hologoLogoFontSetup}$   $\{\langle logo\rangle\}$   $\{\langle key\ value\ list\rangle\}$

Fonts can also be set for a logo or logo component separately, see the following list. The keys are the same as for  $\text{\hologoFontSetup}$ .

$\langle logo\rangle$	keys	result
$\text{\BibTeX}$	bibsf	$\text{\BibTeX}$
$\text{\BibTeX}$	sc	$\text{\BibTeX}$
$\text{\ExTeX}$	rm	$\text{\varepsilon_XTeX}$
$\text{\SliTeX}$	rm	$\text{\SliTeX}$
$\text{\AmS}$	sy	$\mathcal{M}\mathcal{S}$
$\text{\ExTeX}$	sy	$\text{\varepsilon_XTeX}$
$\text{\NTS}$	sy	$\mathcal{N}\mathcal{S}$
$\text{\KOMAScript}$	sf	KOMA-Script
$\text{\METAFONT}$	logo	$\text{\METAFONT}$
$\text{\METAPOST}$	logo	$\text{\METAPOST}$
$\text{\SliTeX}$	sc $\text{\SliTeX}$	

### 1.5.1 Font order

For all logos the font **general** is applied first. Example:

$\text{\hologoFontSetup}\{\text{\general}=\text{\color{red}}\}$

will print red logos. Then if the font uses a special font `sf`, for example, the font is applied that is setup by `\hologoLogoFontSetup`. If this font is not setup, then the common font setup by `\hologoFontSetup` is used. Otherwise a warning is given, that there is no font configured.

## 1.6 Additional user macros

Usually a variant of a logo is configured by using `\hologoLogoSetup`, because it is bad style to mix different variants of the same logo in the same text. There the following macros are a convenience for testing.

```
\hologoVariant {\langle name \rangle} {\langle variant \rangle}
\HologoVariant {\langle name \rangle} {\langle variant \rangle}
```

Logo `\langle name \rangle` is set using `\langle variant \rangle` that specifies explicitly which variant of the macro is used. If the argument is empty, then the default form of the logo is used (configurable by `\hologoLogoSetup`).

`\HologoVariant` is used if the logo is set in a context that needs an uppercase first letter (beginning of a sentence, ...).

```
\hologoList
\hologoEntry {\langle logo \rangle} {\langle variant \rangle} {\langle since \rangle}
```

Macro `\hologoList` contains all logos that are provided by the package including variants. The list consists of calls of `\hologoEntry` with three arguments starting with the logo name `\langle logo \rangle` and its variant `\langle variant \rangle`. An empty variant means the current default. Argument `\langle since \rangle` specifies with version of the package `hologo` is needed to get the logo. If the logo is fixed, then the date gets updated. Therefore the date `\langle since \rangle` is not exactly the date of the first introduction, but rather the date of the latest fix.

Before `\hologoList` can be used, macro `\hologoEntry` needs a definition. The example file in section 1.8 shows applications of `\hologoList`.

## 1.7 Supported contexts

Macros `\hologo` and friends support special contexts:

- L<sup>A</sup>T<sub>E</sub>X's protection mechanism.
- Bookmarks of package `hyperref`.
- Package `tex4ht`.
- The macros can be used inside `\csname` constructs, if `\ifincsn` is available (pdfT<sub>E</sub>X, X<sub>Y</sub>T<sub>E</sub>X, LuaT<sub>E</sub>X).

## 1.8 Example

The following example prints the logos in different fonts.

```
1 \documentclass{article}
2 %<<verbatim
3 \NeedsTeXFormat{LaTeX2e}
4 \documentclass[a4paper]{article}
5 \usepackage[
6   hmargin=20mm,
```

```

7   vmargin=20mm,
8 ]{geometry}
9 \pagestyle{empty}

\HoLogo@BibTeX@sf Variant sf avoids trouble with unavailable small caps fonts (e.g., bold versions
of Computer Modern or Latin Modern). The definition is taken from package
dtklogos [2].

## 3 Installation

### 3.1 Download

**Package.** This package is available on CTAN<sup>1</sup>:

[CTAN:macros/latex/contrib/oberdiek/hologo.dtx](http://CTAN:macros/latex/contrib/oberdiek/hologo.dtx) The source file.

[CTAN:macros/latex/contrib/oberdiek/hologo.pdf](http://CTAN:macros/latex/contrib/oberdiek/hologo.pdf) Documentation.

**Bundle.** All the packages of the bundle ‘oberdiek’ are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

[CTAN:install/macros/latex/contrib/oberdiek.tds.zip](http://CTAN:install/macros/latex/contrib/oberdiek.tds.zip)

TDS refers to the standard “A Directory Structure for T<sub>E</sub>X Files” ([CTAN:pkg/tds](http://CTAN:pkg/tds)). Directories with `texmf` in their name are usually organized this way.

---

<sup>1</sup>[CTAN:pkg/hologo](http://CTAN:pkg/hologo)

## 3.2 Bundle installation

**Unpacking.** Unpack the `oberdiek.tds.zip` in the TDS tree (also known as `texmf` tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

## 3.3 Package installation

**Unpacking.** The `.dtx` file is a self-extracting `docstrip` archive. The files are extracted by running the `.dtx` through plain `TEX`:

```
tex hologo.dtx
```

**TDS.** Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

<code>hologo.sty</code>	→ <code>tex/generic/oberdiek/hologo.sty</code>
<code>hologo.pdf</code>	→ <code>doc/latex/oberdiek/hologo.pdf</code>
<code>example/hologo-example.tex</code>	→ <code>doc/latex/oberdiek/example/hologo-example.tex</code>
<code>hologo.dtx</code>	→ <code>source/latex/oberdiek/hologo.dtx</code>

If you have a `docstrip.cfg` that configures and enables `docstrip`'s TDS installing feature, then some files can already be in the right place, see the documentation of `docstrip`.

## 3.4 Refresh file name databases

If your `TEX` distribution (`TEX Live`, `mikTEX`, ...) relies on file name databases, you must refresh these. For example, `TEX Live` users run `texhash` or `mktextlsr`.

## 3.5 Some details for the interested

**Unpacking with  $\LaTeX$ .** The `.dtx` chooses its action depending on the format:

**plain `TEX`:** Run `docstrip` and extract the files.

**$\LaTeX$ :** Generate the documentation.

If you insist on using  $\LaTeX$  for `docstrip` (really, `docstrip` does not need  $\LaTeX$ ), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{hologo.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

**Generating the documentation.** You can use both the `.dtx` or the `.drv` to generate the documentation. The process can be configured by the configuration file `ltxdoc.cfg`. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with `pdf $\LaTeX$` :

```
pdflatex hologo.dtx
makeindex -s gind.ist hologo.idx
pdflatex hologo.dtx
makeindex -s gind.ist hologo.idx
pdflatex hologo.dtx
```

## 5 History

[2010/04/08 v1.0]

- The first version.

[2010/04/16 v1.1]

- `\Hologo` added for support of logos at start of a sentence.
- `\hologoSetup` and `\hologoLogoSetup` added.
- Options `break`, `hyphenbreak`, `spacebreak` added.
- Variant support added by option `variant`.

[2010/04/24 v1.2]

- L $\mathcal{A}$ T $\mathcal{E}$ X3 added.
- V $\mathcal{T}$ E $\mathcal{X}$  added.

[2010/11/21 v1.3]

- ini $\mathcal{T}$ E $\mathcal{X}$ , vir $\mathcal{T}$ E $\mathcal{X}$  added.

[2011/03/25 v1.4]

- Con $\mathcal{T}$ E $\mathcal{X}$ t with variants added.
- Option `discretionarybreak` added as refinement for option `break`.

[2011/04/21 v1.5]

- Wrong TDS directory for test files fixed.

[2011/10/01 v1.6]

- Support for package `tex4ht` added.
- Support for `\csname` added if `\ifincsname` is available.
- New logos: `\LaTeX`, `biber`, `BIBTeX` (`sc`, `sf`), `emTeX`, `\epsilonTeX`, `KOMA-Script`, `IA`, `LAX`, `MiKTeX`, `ℳS`, `OzMF`, `OzMP`, `OzTeX`, `OzTtH`, `PCTeX`, `PIC`, `PICTeX`, `METAfont`, `MetaFun`, `METAPOST`, `MetaPost`, `SLTeX` (`lift`, `narrow`, `simple`), `SLiTeX` (`narrow`, `simple`, `lift`), `teTeX`.
- Fixes: `iniTeX`, `pdfLaTeX`, `pdfTeX`, `virTeX`.
- `\hologoFontSetup` and `\hologoLogoFontSetup` added.
- `\hologoVariant` and `\HologoVariant` added.

[2011/11/22 v1.7]

- New logos: `BIBTeX8`, `LATeXML`, `SageTeX`, `TeX4ht`, `TTH`.
- `XY` and friends: Driver stuff fixed.
- `XY` and friends: Support for italic added.
- `XY` and friends: Package support for `pgf` and `pstricks` added.

[2011/11/29 v1.8]

- New logos: Hàn Thế Thành.

[2011/12/21 v1.9]

- Patch for package `ifxetex` added for the case that `\newif` is undefined in `iniTeX`.
- Some fixes for `iniTeX`.

[2012/04/26 v1.10]

- Fix in bookmark version of logo “Hàn Thế Thành”.

[2016/05/12 v1.11]

- Update `HOLOGO@IfCharExists` (previously in `texlive`)
- define `pdfliteral` in current `luatex`.

[2016/05/16 v1.12]

- Documentation updates.

[2017/05/01 v1.13]

- Removing spurious comments in bibliography. (github PR from yudai-nkt)

## 6 Index

Numbers written in *italic* refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; plain numbers refer to the code lines where the entry is used.
