

sample.  
`\printnoidxglossaries` follows: ??

## Glossary

**sample** an example 1

Too late to define an entry with the `docdef=restricted` setting. (Definitions must come before `\printglossary`.)

New entry just defined: sample2. This will cause an error (or warning with `undefaction=warn`) in `\printnoidxglossaries`. This missing entry will cause a missing entry marker ?? at the start of the glossary (before the header).
