

# Lemma’s disambiguation

## Summarium

This file provides an example of lemma’s disambuigation.

All word which can potentially be twice (or more) in a same line is marked by an “sameword. *reledmac* print the word rank only if the word is effectively printed twice (or more) time in the same line.

For use with “Lemma, please read the handbook.

1       Leo aut ursus aut oryx aut ricinus aut equus aut lupus aut canis aut felix aut asinus  
 2       aut burricus.
