

# Lemma's disambiguation

## Summarium

This file provides an example of lemma's disambiguation.  
All word which can potentially be twice (or more) in a same line is marked  
by an \sameword. *reledmac* print the word rank only if the word is effectively  
printed twice (or more) time in the same line.  
For use with \lemma, please read the handbook.

1       Leo aut ursus aut oryx aut ricinus aut equus aut lupus aut canis aut felix aut asinus  
2   aut burricus.
