

# The hyperref-generic module

## A generic driver for hyperref

The L<sup>A</sup>T<sub>E</sub>X Project\*

Version 0.95g, released 2021-07-21

This module generates a generic driver for `hyperref` meant to be used with the new L<sup>A</sup>T<sub>E</sub>X PDF management code. It is loaded automatically if the PDF management code is active. The name of the driver will change after the testphase.

The generic driver can be used with `pdflatex`, `lualatex`, `xelatex`, `latex` with `dvipdfmx`, `latex` with `dvips+ps2pdf`. `latex` with `dvips+distiller` could work too but is untested. (x)dvipdfmx will probably soon support `dvilualatex`, then this combination should work too.

The driver *requires* the new PDF management code, so documents wanting to use it should start like this

```
\RequirePackage{pdfmanagement-testphase} %loads the code
\DeclareDocumentMetadata % activates it
{
  %% options
  %% e.g. pdf version, backend:
  % pdfversion=1.7,
  % backend = dvipdfmx
}
```

The new driver tries to be compatible with the standard `hyperref` drivers but there are nevertheless differences. Some of them due to the still experimental status of the driver, others are design decisions: one part of the project is to clean up and modernize the code. The following sections try to describe the differences but also to document some of the rationales of the changes, and to add some details and comments about the existing options and so to extend the `hyperref` manual.

## 1 Avoiding transition problems

Some code will only work properly after other packages have been adapted to the new PDF management code and the changes in this driver. This will take some time. Until then it is recommended to follow the following rules

- Package options are processed at the end of the driver, Class options are ignored. But not every option already works as package options, in some cases `hyperref` interferes. So it is recommended for most options —with the exception of a few mentioned below in section 9—to set them in `\hypersetup`, not as package option.

---

\*E-mail: [latex-team@latex-project.org](mailto:latex-team@latex-project.org)

- This driver uses the `l3color` module for the colors. All colors defined with `\color_set:nn` or `\color_set:nnn` will work. Colors defined with `xcolor` will work if they don't use one of the special color models not supported by `l3color` as `pdfmanagement-firstaid` contains a patch for `xcolor`. If the package `color` is used it is currently recommended to define colors after `hyperref`.
- Load a color package or `graphicx` to get the right page sizes.
- Report problems! Only known problem can be resolved.

## 2 Bookmarks / outlines

The new driver doesn't contain code to handle bookmarks/outlines. Instead it forces the loading of the `bookmark` package unless the package option `bookmarks=false` has been used. Currently `bookmark` is loaded at the end of the preamble so if commands from `bookmark` are needed in the preamble the document should load it manually. This is subject to change at some time in the future.

## 3 “Metadata”

“Metadata”, informations about the document, are stored in a PDF in two places: The `/Info` dictionary and the XMP-metadata. `hyperref` only handles the `/Info` dictionary. The XMP-metadata can be added with like `pdfx` and `hyperxmp`.

The `/Info` dictionary can be filled with arbitrary keys, but the PDF viewer typically care only about a few, like `/Author`, `/Title` and `/Keywords`. A number of `/Info` keys, like dates and the producer, are added automatically by the engines and backends. Some of them can only be removed with special commands, some not at all. But—with the exception of `/Producer` when using the dvips backend—they can be overwritten.

The current handling of the metadata is problematic:

- External package like `hyperxmp` wants to access them too and for this had to patch an number of internal `hyperref` commands—which is a problem if the internal commands change (as happens with this new driver)
- `hyperref` (and also `hyperxmp`) tries to deduce some datas from document commands like `\title` or `\author`—something that worked reasonably well when only some standard classes with well-known definitions of these command existed, but gets problematic with classes and packages which define more powerful commands knowing a variety of optional arguments to set authors and affiliations and title information.

To resolve some of this problem the driver will

- *Not* try deduce author and title from documents. They have to be set in `\hypersetup` with `pdfauthor` and `pdftitle`. It is recommended to separate more than one author by commas, and to hide commas inside braces if needed:

```
pdfauthor = {Bär, Peter Anteater, {Riley, the sloth}}
```

- All values of relevant keys (including keys from the `hyperxmp` package) will be stored in a Metadata container, and can be retrieved with `\GetDocumentProperties`.

```
\edef\my@pdfauthor{\GetDocumentProperties{hyperref/pdfauthor}}
```

If the key hasn't be set, the result is empty. This gives external packages a public and reliable access to the data.

- `pdflang` is deprecated. Instead `\DeclareDocumentMetadata` should be used:

```
\DeclareDocumentMetadata{lang=de-DE}
```

The value can be retrieved as `document/lang`.

## 4 Dates

`hyperref` has a few keys to set dates. They typically expect the date in “PDF” format: `D:YYYYMMDDhhmmss+01'00'`.

One should be aware that `hyperxmp` will sometimes overwrites such settings.

## 5 PDF page size (mediabox)

The standard `hyperref` driver contain code to set the PDF page size. There is no real justification why this is done by `hyperref` apart from the fact that `LATEX` itself doesn't do it and that the needed special code could be added to the backend drivers.

In the new driver this code is gone. The reason is not that it is difficult to set the `MediaBox`, actually it could be done with one line of code:

```
\pdfmanagement_add:nnn{Page}{MediaBox}
  {[0-0~\dim_to_decimal_in_bp:n{\paperwidth}~
    \dim_to_decimal_in_bp:n{\paperheight}}}
```

The problem is to know which value to use (with the memoir class e.g. `\stockwidth` should be used instead of `\paperwidth`), and detecting this not a `hyperref` task. Instead the packages which change these values should also set the PDF page size. Also there are too many actors here: `color/graphicsx`, `geometry`, the KOMA-classes, memoir, ... all try to set this.

So if the PDF page size is wrong: load one of the other packages setting it e.g. the `color` or the `graphicsx` package.

## 6 Commands to create “external” references

`hyperref` has three commands related to external references like URL and file: `\url`, `\nolinkurl` and `\href`. The first two take one argument, while the last has two: the url and some free text.

`\url` and `\href` create link annotations. `\url` creates always an URI type, `\href` creates URI, GoToR and Launch depending on the structure of the argument.

`\href` has to create a (in the PDF) valid url or file name from its first argument. `\url` has to create a (in the PDF) valid url from its only argument and has also to print this argument as url. `\nolinkurl` only prints the url.

For the printing `\url` and `\nolinkurl` rely on the `url` package and its `\Url` command.

(Expandable) commands are expanded and special chars can also be input by commands but beside this no conversion is done: for all input `hyperref` basically assumes that

the input is already a valid percent encoded url or a valid file name. `hyperref` also doesn't extend or add protocols.

As nowadays everyone is used to copy and paste links with all sorts of unicode into a browser and they work the `hyperref` input is clearly rather restricted.

So the new driver tries to extend the input and print options. Both `\href` and `\url` can now be told to accept non-ascii url's and to convert them internally to percent encoding. It is possible to define a standard protocol and so to avoid to have to type it all the time.

But extending the *print* options for `\url` and `\nolinkurl` while still using the `url`-package is hard to impossible in pdfL<sup>A</sup>T<sub>E</sub>X due to the way the `url` package works. Some chars can be added with the help of `\UrlSpecial` (at the cost of warnings) but it doesn't work for every input and documenting and explaining all the edge cases is no joy. So instead the new driver offers here the option to use different commands to format the printed output. It must be noted that this disable the special "hyphenation" method of url's.

## 6.1 Special problem: links to files

When a file is linked with `\href` than normally it is added as URI link. The exceptions are PDF's: for them PDF has the special type `GoToR` which allows also to link to a destination or a special page.

After a number of tests with various PDF viewer established that non-ascii files names don't work at all with a simple file name specification `GoToR` links now use a full filespec dictionary. This works better, but still no every PDF viewer support this correctly. on various system.

The following can be used to test viewers. It assumes that a `test.pdf`, a `grüßpdf.pdf` and a `grüße.txt` are in the current folder.

```
test-ascii
test grüßpdf.pdf
test grüße.txt
```

## 6.2 Splits

`\href` tries to be clever and to detect from the argument if a url or a file link or a launch command should be created.

The rules are not trivial, and they make the code complicated. This detection also makes it more difficult to handle special cases like non-ascii input for the link types.

For this reason three new commands have been create:

- `\hrefurl` for standard urls (and non-pdf files)
- `\hrefpdf` for references to pdf files
- `\hrefrun` for launch links

The new commands don't use prefixes like `\href`. Their argument should be the real content.

## 6.3 Options

All `\href` commands and `\url` have an option argument for keyval syntax. It accepts the following keys. Not all keys make sense for all keys, but they don't error, they are silently ignored. The optional argument can currently not be used together with the `\urldef` command.

key	applicable commands	note
<code>urlencode</code>	<code>\hrefurl</code>	if set the code will convert the argument to percent encoding. This allows non-ascii input.
<code>protocol</code>	<code>\hrefurl</code> , <code>\url</code>	This sets a prefix/protocol that is added to the url, see below.
<code>format</code>	<code>\url</code>	a command used to format the printed text. It replaces the standard <code>\Url</code> . This can improve non-ascii typesetting at the cost of losing the special line breaking.
<code>destination</code>	<code>\href</code> , <code>\hrefpdf</code>	A destination name in the PDF
<code>page</code>	<code>\href</code> , <code>\hrefpdf</code>	destination page, default: 1
<code>pdfremotestartview</code>	<code>\href</code> , <code>\hrefpdf</code>	start view, default: Fit
<code>ismap</code>	<code>\href</code> , <code>\hrefurl</code>	see PDF reference
<code>afrelationship</code>	<code>\href</code> , <code>\hrefpdf</code>	Changes the <code>/AFRelationship</code> key of the filespec dictionary. The value should be a PDF name without the starting slash.
<code>run-parameter</code>	<code>\hreflaunch</code>	run parameter (see the PDF reference)
<code>nextactionraw</code>	various	puts a <code>/Next</code> entry in the action dictionary (see the PDF reference)

The first four keys can be set also in `\hypersetup` for all following commands in the current group through the keys `href/urlencode`, `href/protocol`, `href/destination`, `href/format`.

It is possible to define own url commands with specific options e.g. with

```
\NewDocumentCommand\myurl{0{}}{\url[protocol=https://,format=\textsc,#1]}
```

## 7 Link decorations: border, color, OCG-color, ...

Some main changes are

- The default colors have been changed.
- `citecolor` is no longer set with `allcolors` and it is not part of the color scheme, it is only supported for compability.
- a number of color schemes have been predefined.

### 7.1 Background information

With the standard drivers `hyperref` allows either to color the link text, or to use a border around it. There is also a (rather unknown) option `frenchlinks` to use small caps for some links instead of colors.

The *link border* is a setting in the PDF annotation directory. It can be colored and styled (with the `<xxx>bordercolor`, `pdfborderstyle` and `pdfhighlight` keys), but the exact look depends on the PDF viewer. Such decorations are normally not printed.

The *link text* is colored with the standard color commands for text. Such a color is also printed, which is often not wanted. The printing can be avoided in PDF with so-called OCG-layers: They allow to add variants of a text along with instructions which variant should be used for viewing and which for printing. `hyperref` implements a rather simple version for links: The link text is put in a box and printed twice with different colors on different OCG layers. As boxes are used such links can't be broken. The package `ocgx2` implements a more sophisticated version which allows to use it for links broken over lines and pages.

`hyperref` has keys to set the color and border for `link`, `url`, `file`, `menu` and `run` types. They correspond to the PDF annotation types `GoTo`, `URI`, `GoToR`, `Named` and `Launch`. Beside this there is a `anchorcolor` which isn't used at all, and `citecolor` which is a semantical category and doesn't fit to the other types.

In the standard drivers the decoration options are more or less exclusive and global: One of the options (`colorlinks`, `ocgcolorlinks`, or `borders`) has to be chosen in the preamble and is then used for the whole document and all link types. Only colors and eventually the border style can be adjusted locally. But there is no technical reason for these restrictions: It is quite possible to change all these attributes at any time both by link type and locally. The restrictions of the current implementation can only be explained by the age of the code: `hyperref` has been created at a time when memory was small and the main drivers were html and postscript based.

While link colors have been traditionally more or less under the control of `hyperref`, the situation with other format options, like the font, is more complicated. The font in `\url` is for example determined by `\Urlfont`, a command from the `url` package. In the case of internal (`GoTo`) references packages like `cleveref` or `biblatex` or `glossaries` offer formatting options too. Formatting here is often connected to semantics: an acronym should use a different font than a citation. While `hyperref` could offer options here, it would probably only clash with package formatting. It is more sensible not to interfere here. For this reason the `frenchlinks` option has been dropped.

## 7.2 New Keys

Some of the existing keys have been extended to allow individual setting for the link types `link`, `url`, `file` `menu` and `run`:

- Beside `pdfborder` there are also `linkborder`, `urlborder` etc
- Beside `pdfhighlight` there are also `linkhighlight`, `urlhighlight` etc
- Beside `pdfborderstyle` there are also `linkborderstyle`, `urlborderstyle` etc
- Beside `colorlinks` there are also `colorlink`, `colorurl` etc
- Beside `ocgcolorlinks` there are also `ocgcolorlink`, `ocgcolorurl`, etc TODO
- Beside `hidelinks` there are also `hidelink`, `hideurl`, etc
- `bordercolormodel` allows to set the model used in annotations, the allowed values are `rgb` or `cmk`. `rgb` is the default. It does *not* change the model of text colors. Be aware that while the PDF format allows `cmk` (4 numbers) in the `/C` key of an annotation, this is often ignored by pdf viewers and the colors can be wrong.

- The boolean keys `url`, `link`, `run`, `menu`, `file` allow to deactivate locally the link types.

**colorscheme** (*setup key*) The new key `colorscheme` allows to switch the colors (both for text and borders) with a key word. It takes one of the values `original` (the colors as `hyperref` uses normally), `phelype`, `daleif`, `szabolcsA`, `szabolcsB`, `tivv`, `julian`, `henryford`.

The names refer to the authors in answers and comments in <https://tex.stackexchange.com/questions/525261/better-default-colors-for-hyperref-links>.  
The default is `phelype`.

### 7.3 Public interfaces

The `colorlinks` and `ocgcolorlinks` and related keys are using these booleans:

```
\l_hyp_annot_colorlink_bool,
\l_hyp_annot_colorurl_bool,
\l_hyp_annot_colorfile_bool,
\l_hyp_annot_colorruncolor_bool,
\l_hyp_annot_colormenu_bool,
\l_hyp_annot_ocgcolorlink_bool,
\l_hyp_annot_ocgcolorurl_bool,
\l_hyp_annot_ocgcolorfile_bool,
\l_hyp_annot_ocgcolorruncolor_bool,
\l_hyp_annot_ocgcolormenu_bool,
```

They are both inserting hook code in the `pdfannot/link/<type>/begin` and `pdfannot/link/<type>/end` hooks. `<type>` is one of `GoTo`, `URI`, `GoToR`, `Named` or `Launch`.  
`colorlinks` uses the label `hyp/color`, and `ocgcolorlinks` the label `hyp/ocg`.

They both use the same color names: `hyp/color/link`, `hyp/color/url`, `hyp/color/file`, `hyp/color/run`, `hyp/color/menu`.

The cite colors uses the names `hyp/color/cite` and `hyp/color/citeborder`.

The border colors aren't saved in color names currently, but if the need would arise it would be possible to change this.

### 7.4 Changed behaviour

**colorlinks** `colorlinks` will as before disable the `pdfborder`, but it is possible to use the key in the document at any time, or to reenable the border if wanted. Internally `colorlinks` & friends will no longer define/undefine `\Hy@colorlink`, but instead use the hooks provided by the `l3pdfannot` package.

Color keys accept the following input syntax:

```
model based      urlbordercolor = [rgb]{1,1,0}
color expression urlbordercolor = red!50!blue
command          urlbordercolor = \mycolor
```

where `\mycolor` should expand to one of the other two syntax variants.

**frenchlinks** The option `frenchlinks` does nothing at all.

**cite colors** As mentioned above the support for `citecolor` and `citebordercolor` has been reduced. A package like `hyperref` can't keep track of such semantic contexts like `cite`, `acronym`, `glossaries` and special references and maintain keys for them. The keys are not completely dropped as this would affect packages like `natbib`, but they have been separated and are no longer affected by group keys like `allcolors` but must be set individually instead.

**link margin** The driver sets a default link margin—this is identical to `pdftex` and `luatex` driver, but a change for the `xetex` and `dvips` driver. The (undocumented) command `\setpdflinkmargin` does nothing. Use either the key `pdflinkmargin` or `\pdfannot_link_margin:n` to change the margin. See also the description in section 14 and in the `hyperref` manual.

## 8 PDF strings

`hyperref` uses a command called `\pdfstringdef` to convert text input into something that makes sense and is valid in a PDF string, e.g. in the bookmarks or in the info dictionary or as form field values.

As the handling of the outlines are delegated to the `bookmark` package, they will for now still use `\pdfstringdef`, but all other strings produced by this driver will use a new method based on the `expl3` commands `\text_purify:n` and `\str_set_convert:Nnnn`. For normal text it shouldn't matter, but a variety of commands and math are handled differently. Like with `\pdfstringdef` they are a number of ways to adjust the outcome of `\text_purify:n`. These are described in the `expl3` documentation `interface3.pdf`.

*The new method is under heavy development!*

Important differences here are

- *This new method requires that files are utf8-encoded* (at least if non-ascii chars are used in for PDF strings).
- All robust commands are currently removed, unless an equivalent has been declared.
- Currently the new method is much more silent: it doesn't warn like `hyperref` if it removes commands.

## 9 Package options from `hyperref`

The driver will process the package options at the end. But normally options should better be set with `\hypersetup` after the package has been loaded. This is also the case for options which normally don't work in `\hypersetup`. One option that currently doesn't work correctly as package option is `ocgcolorlinks`

Options that still must be set as package options are

- `backref`
- `CJKbookmarks` this key should not be used anymore. At some time it will be removed.
- `destlabels` (destination names are taken from `\label` if possible)
- `encap`

- **hyperfigures** (according to the **hyperref** manual it makes figures hyper links, but actually is a no-op for most drivers, and it does nothing with this driver either.)
- **hyperfootnotes**
- **hyperindex**
- **implicit** (redefine L<sup>A</sup>T<sub>E</sub>X internals)
- **nesting** unneeded key, see comment below in 14. At some time it will be either removed or extended (if some use can be found).
- **pagebackref**
- **pdfpagelabels** (set PDF page labels)
- **psdextra** this loads some extra definitions used by `\pdfstringdef`. The new driver uses `\pdfstringdef` only for the bookmarks, for other strings it is not relevant.

Options that can be without problems set as package options are

- **debug**, **verbose** (a boolean)
- **bookmarks** (a boolean)
- **plainpages**
- **draft**, **final**
- **hypertexnames**
- **naturalnames**
- **pageanchor**

Ignored options:

- All driver options like **pdftex**, **dvipdfmx**, ...
- **raiselinks** (only used in the dviwind, textures and tex4ht driver anyway)
- **frenchlinks**
- **setpagesize**
- **addtopdfcreator**

## 10 Disabling links

**hyperref** knows like many packages the options **draft** and **final**. With **hyperref** they can be used as package options or in the preamble in `\hypersetup` and disable links and anchors completely. The new driver passes the options also to the **bookmark** package if **bookmark** hasn't been loaded yet as bookmarks can't work properly if the anchors from **hyperref** are missing.

**link** (*setup key*)      The **draft** option is a global option that can't be undone (at least not easily). So the new driver offers also boolean keys **link**, **url**, **file**, **run** and **menu** which allow to locally disable a link type. So e.g. `\hypersetup{link=false}\ref{abc}` will give a reference without link (this is naturally also possible with `\ref*{abc}`). This disables also all hooks of the link type, so the link is for example no longer colored. It also removes the implicit grouping of the content.

**url** (*setup key*)

**file** (*setup key*)

**run** (*setup key*)

**menu** (*setup key*)

## 11 Draftmode

pdftex and other engines knows a draftmode which can be set with `\pdfdraftmode=1` and `hyperref` honors this in some places. The new driver ignores it, for example `pagelabels` are created in any case. With today's computer power there is not much to gain and it only complicates the code.

This should not be confused with the `draft` and `final` package options! They are still honored.

## 12 Dropped options

A number of options are ignored by this driver

**pdfversion** The `pdfversion` should be set in `\DeclareDocumentMetadata`

**setpagesize** The key is ignored and the PDF page size is not set. Load `color` or `graphicx` or use a class which sets the PDF page size.

**breaklinks** The option does nothing sensible anyway (apart from triggering a warning). Currently with latex+dvips links can't be broken. But there is work in progress to change this.

**unicode** This is always true.

**pdfa** If this option is set to true `hyperref` normally checks and sets a small number of requirements for the PDF standard PDF/A. The key is ignored with this driver. Instead the wanted standard should be declared in `\DeclareDocumentMetadata`:

```
\DeclareDocumentMetadata{pdfstandard=A-2b}
```

Currently A-1b, A-2b, A-3b can be set. The support for various requirements is still incomplete, but the parts that `hyperref` checked are implemented:

- The `/F` key is added to links and `Print` is activated, `Hidden`, `Invisible`, `NoView` are deactivated.
- `/NeedAppearances` is suppressed
- Pushbuttons, which use the action `/S/JavaScript` are suppressed.
- Resetbuttons, which use the action `/S/ResetForm` are suppressed.
- In widget annotations, the `/AA` dictionary is suppressed.

## 13 Destinations

Destinations (sometimes call anchors in the `hyperref` documentation) are the places a link jumped too. Unlike the name may suggest they don't described an exact location in the PDF. Instead a destination contains a reference to a page along with an instruction how to display this page. The normally used "`XYZ top left zoom`" for example instructs the viewer to show the page with the given *zoom* and the top left corner at the *top left* coordinates—which then gives the impression that there is an anchor at this position.

From these instructions two (`Fit` and `FitB`) don't take an argument. All others take one (`FitH`, `FitV`, `FitBH`, `FitBV`) or more (`XYZ`, `FitR`) arguments. These arguments

are normally coordinates, `XYZ` takes also a zoom factor. The coordinates are absolute coordinates in `bp` relative to the lower left corner of the PDF.

With the primitive command `\pdfdest` of `pdftex` almost all instructions are created with a keyword only: The needed coordinate is calculated automatically from the location the `\pdfdest` command is issued. So to get a specific coordinate one has to move the command to the right place. E.g.

```
\AddToHookNext{shipout/background}
{\put(0,-\pdfpageheight+100bp){\pdfdest name{destA} FitH\relax}}
```

Exceptions are the `XYZ` instruction, where `pdftex` accepts a keyword `zoom` followed by a zoom factor, and the `FitR` instruction which understands the keywords `width`, `height` and `depth` followed by a dimension, which is then used to calculate a rectangle relative to the current location. If no keywords are given the dimensions are taken from the surrounding box—which can also lead to zero sized areas.

The manual of `hyperref` gives a bit the impression as if this coordinates can be set manually by the user but as described above this is mostly wrong: It is for normal destination only possible with a dvi-backend like `dvips` which make use of `pdfmark.def`. `pdftex` and `luatex` can use manual coordinates only for `pdfstartview` and `pdfremotestartview`. As `dvips` was the first driver of `hyperref` the option `pdfview` was at first developed for it and then adapted to `pdftex`. But this had the effect that the handling of the option `pdfview` is inconsequent across the backend and engines: For example with `pdfview=FitH 100` `pdftex` ignores the number and calculates its own, while `dvips` sets the coordinate to the absolute 100. The zoom factor of `XYZ` is not supported by the `pdftex` driver at all, and `FitR` only partially.

The generic driver consolidate this but tries to stay compatible with the other drivers as far as possible. It also takes into account that `pdfview` and `pdfstartview` and `pdfremotestartview` have different requirements: While for the first relative coordinates are fine, for the two others absolute coordinates are more sensible.

`pdfview` (setup key)      So with this driver the options `pdfview`, `pdfstartview` and `pdfremotestartview`  
`pdfstartview` (setup key) take the following options:  
`pdfremotestartview` (setup key)

- `Fit`, `FitB`, `FitH`, `FitV`, `FitBH`, `FitBV` which can be followed by a positive integer (separated by a space) or the keyword `null`. The number can be gives as a *<dimension expression>* surrounded with `\hypercalcbp`. The driver redefines this command to use `\dim_to_decimal_in_bp:n`.
  - `pdfview` will ignore the integer and any other arguments and calculate the expected coordinates as described above for `pdftex` with all supported engines and backends.
  - `pdfstartview` and `pdfremotestartview` will pass the optional number or keyword after expansion as absolute coordinate. Missing numbers will be filled up with `null`.
- `XYZ`. This can be followed (separated by spaces) by up to three positive integers or keywords `null` which are then taken as *top left zoom* in this order. *zoom* is a factor, so e.g. 0.5 will give a scaling of 50%.
  - `pdfview` will use the last value as *zoom*, ignore all other values and calculate the expected coordinates as described above for `pdftex` with all supported engines and backends (this means it is possible to use `XYZ 2` to set a zoom of 200%, it is not necessary to fill in dummy values.)

- `pdfstartview` and `pdfremotestartview` will pass the optional numbers or keyword after expansion as absolute coordinates and zoom. Missing numbers will be filled up with `null`.

This new behaviour is in part incompatible with previous handling with the dvips driver.

- **FitR.** If no argument (separated by spaces) follows then `pdfview` will use with pdf-tex and luatex the automatic calculation of the coordinates from the encompassing box. With dvips and (x)dvipdfmx it will fall back to `Fit`. `pdfstartview` and `pdfremotestartview` will fallback to `Fit` too.

If arguments (separated by spaces) follow they should be four numbers representing `left bottom right top`.

- `pdfview` will use the values to calculate coordinates relative to the current location. So `0 -100 200 400` will give a “box” of width 200bp, height 400bp and depth 100dp that the destination should encompass. Missing numbers will be set to 0. But one should be aware that it is quite unpredictable how viewers which support `FitR` handles zero sizes.
- `pdfstartview` and `pdfremotestartview` will pass the values as absolute coordinates.

## 14 Assorted key descriptions

The following gives a few details to some keys that are perhaps not completely described in the manual, or are a bit different in this driver. The list is alphabetic.

**bookmarkstype** (*setup key*) This key takes as value the extension of a list like `toc` or `lof`. If this list uses `\addcontentsline` the content will be added to the bookmarks. The key can be use in `\hypersetup` and also in the middle of the document to switch the list.

**bordercolormodel** (*setup key*) With `bordercolormodel` the colormodel used in the `/C` key of the annotation array and in similar keys is set. It does not affect the text and graphics colors in the page stream. Possible choices are `rgb` (three numbers in the array) and `cmymk` (four numbers). While the PDF reference allows four numbers, PDF readers don’t necessarily handle this correctly, so the value can be wrong.

**destlabel** (*setup key*) This is a boolean key. Currently it must be set as package option. If set to true, the name of a destination is taken from a following `\label`, if there is one before the next destination command. This requires two compilations to get the correct coordinates in the destination. In the first compilation the alias name is recorded in the aux-file:

```
\hyper@newdestlabel{section.1.2}{sec:sec2}
```

The next compilation can then make use of it. The two-pass could be avoided in the future with a better labeling system, where the name if set earlier.

**extension** (*setup key*) This key sets an variable that has two purposes: It is used if file name has not extension, and it decides if the annotation is a URI or GoToR annotation. So

```
\hypersetup{extension=dvi}
\href{mwe1.pdf}{pdf}
\href{mwe2.dvi}{dvi}
\href{mwe3}{no ext}
```

will create

```
/Subtype/Link/A<</S/URI   /URI(mwe1.pdf)>>
/Subtype/Link/A<</S/GoToR /F   (mwe2.dvi)>>
/Subtype/Link/A<</S/GoToR /F   (mwe3.dvi)>>
```

Typically PDF viewer can handle only GoToR annotations pointing to a PDF. So normally the default value `pdf` of this key should not be changed. This key is useless in PDF context. The boolean is only used in the code for anchors/destination where nesting doesn't make sense. It should not be changed.

`nesting` (*setup key*)

`pdfborder` (*setup key*)

`linkborder` (*setup key*)

`urlborder` (*setup key*)

`runborder` (*setup key*)

`menuborder` (*setup key*)

This key set accept as value three numbers or three numbers and an array describing a dash pattern, examples are 0 0 1 or 0 0 1 [3 2]. The first two numbers should according to the reference set round corners, but PDF viewer seem to ignore it. The third number is the line width of the border. Settings done with `pdfborderstyle` should take precedence.

`pdfborderstyle` (*setup key*)

The value of this key is the content of the BS dictionary. As an example

`linkborderstyle` (*setup key*)

```
/Type/Border /W 1 /S/U /D[3 2]
```

`urlborderstyle` (*setup key*)

Key	Values	comment / example
<code>/Type</code>	<code>/Border</code>	optional
<code>/W</code>	<code>&lt;number&gt;</code>	Width of border line
<code>/S</code>	<code>/S</code>	solid (default)
	<code>/D</code>	dash pattern can be set with <code>/D</code>
	<code>/B</code>	beveled
	<code>/I</code>	inset
	<code>/U</code>	underline
<code>/D</code>	<code>&lt;array of numbers&gt;</code>	dash pattern (lines/gaps) (default [3])

`fileborderstyle` (*setup key*)

`runborderstyle` (*setup key*)

`menuborderstyle` (*setup key*)

`pdfcreationdate` (*setup key*)

Setting these keys is normally not needed. If they are used the values are stored directly in the Info dictionary for `/Creationdate` and `/ModDate`. The values are converted to strings but not processed further, so they should have the correct PDF format without the enclosing parentheses, e.g. `D:20200202111111+01'00'`.

`pdfmoddate` (*setup key*)

`pdflinkmargin` (*setup key*)

As described in the `hyperref` manual the behaviour differs between the backends: with dvips it is possible to change links locally, pdf<sub>l</sub>atex and lua<sub>l</sub>atex work by page, with dvipdfmx the setting is global (and has to be done in the preamble).

`pdflang` (*setup key*)

The key will work, but it is recommended to the set the language in `\DeclareDocumentMetadata` instead.

## File I

# hyperref-generic driver implementation

```
1 <*package>
2 <@@=hyp>
3 \ProvidesFile{hgeneric-testphase.def}[2021-07-21 v0.95g %
4   generic Hyperref driver for the LaTeX PDF management testphase bundle]
5
6 \RequirePackage{etoolbox} %why?
7 \ExplSyntaxOn
```

```

8 \file_input:n {hyperref-colorschemes.def}
9 \ExplSyntaxOff

```

## 1 messages

Redirect the message name:

```

10 \ExplSyntaxOn
11 \prop_gput:Nnn \g_msg_module_name_prop { hyp }{ hyperref }

```

At first a message for the testing of the resource management

```

12 \msg_new:nnnn
13 { hyp }
14 { missing-resource-management }
15 { The~PDF~resource~management~is~required~for~this~hyperref~driver! }
16 {
17   Activate~it~with ~\
18   \tl_to_str:n{\RequirePackage{pdfmanagement-testphase}}\
19   \tl_to_str:n{\DeclareDocumentMetadata{<options>}}\
20   before~\tl_to_str:n{\documentclass}
21 }

```

The pdfversion should be set in \DeclareDocumentMetadata

```

22 \msg_new:nnnn
23 { hyp }
24 { pdfversion-disabled }
25 {
26   This~hyperref~driver~ignores~the~pdfversion~key!\
27   Set~the~pdfversion~in~\token_to_str:N \DeclareDocumentMetadata
28 }
29 {
30   For example:\
31   \tl_to_str:n
32   {
33     \DeclareDocumentMetadata { pdfversion=1.7 }
34   }
35 }

```

A generic message for ignored keys.

```

36 \msg_new:nnn
37 { hyp }
38 { key-dropped }
39 {
40   This~hyperref~driver~ignores~the~key~#1!\
41   Please~check~the~documentation.
42 }

```

pdf/A messages for fields, this will probably be moved to an external package

```

43 \msg_new:nnn
44 { hyp }
45 { pdfa-no-push-button }
46 { PDF/A:~Push~button~with~JavaScript~is~prohibited }
47
48 \msg_new:nnn
49 { hyp }
50 { pdfa-no-reset-button }
51 { PDF/A:~Reset~action~is~prohibited }

```

pdf/A message for not allowed Named actions

```
52 \msg_new:nnn
53 { hyp }
54 { pdfa-no-named-action }
55 { PDF/A:~Named~action~#1~is~prohibited }
```

A message if the destination name is empty.

```
56 \msg_new:nnn
57 { hyp }
58 { empty-destination-name }
59 {
60   Empty~destination~name,\\
61   using~'#1'
62 }
```

A message if the destination check fails

```
63 \msg_new:nnn
64 { hyp }
65 { invalid-destination-value }
66 {
67   Invalid~value~'#1'~of~'#2'  \\
68   is~replaced~by~'Fit'~\msg_line_context:.
69 }
```

Some options or values should not be used in older pdf versions

```
70 \msg_new:nnn
71 { hyp }
72 { ignore-deprecated-or-unknown-option-in-pdf-version }
73 {
74   Option~'#1'~is~unknown~or~deprecated~in\\
75   pdf~version~#2.~Ignored.
76 }
77 \msg_new:nnn
78 { hyp }
79 { ignore-deprecated-or-unknown-value-in-pdf-version }
80 {
81   Value~'#1'~is~unknown~or~deprecated~in\\
82   pdf~version~#2.~Ignored.
83 }
84 \msg_new:nnn
85 { hyp }
86 { replace-deprecated-or-unknown-value-in-pdf-version }
87 {
88   Value~'#1'~is~unknown~or~deprecated~in\\
89   pdf~version~#2. Value~'#3'~is used instead.
90 }
```

During development not all standard hyperref keys are known and the Hyp-handler needs to process some new keys unknown to him. This issues warnings for now:

```
91 \msg_new:nnn
92 { hyp }
93 { unknown-key }
94 {
95   unknown~key~#2~of~module~'#1'~set~to~'#3'.
96 }
```

```

97 \msg_new:nnn
98 { hyp }
99 { unknown-key-to-Hyp }
100 {
101   ignored-in-family-Hyp-unknown-key-#1.
102 }

```

There are a lot choice keys. This defines messages which shows the valid choices if a faulty one has been used:

```

103 \cs_new:Npn \__hyp_clist_display:n #1 {*-#1\\}
104 \msg_new:nnn
105 { hyp }
106 { unknown-choice }
107 {
108   Value-#3'-is-invalid-for-key-#1'.\\
109   The-key-accepts-only-the-choices\\
110   \clist_map_function:nN { #2 }\__hyp_clist_display:n
111 }
112
113 \msg_new:nnn
114 { hyp }
115 { unknown-choice+empty }
116 {
117   Value-#3'-is-invalid-for-key-#1'.\\
118   The-key-accepts-only-the-choices\\
119   \clist_map_function:nN { #2 }\__hyp_clist_display:n
120   An-empty-value-removes-the-setting.
121 }
122
123 \msg_new:nnn
124 { hyp }
125 { no-bool }
126 {
127   Value-#2'-is-invalid-for-key-#1'.\\
128   The-key-accepts-only-the-choices\\
129   *-true\\
130   *-false \\
131   *-and-an-empty-value-which-removes-the-setting.\\
132   No-value-is-equivalent-to-using-true'.
133 }

```

## 2 Variants

```

134 \cs_generate_variant:Nn\pdf_destination:nn {nf}
135 \cs_generate_variant:Nn\pdf_object_ref:n {e}

```

## 3 Overwriting/providing commands from hyperref

hyperref checks driver version, we need to suppress this during the development

```

136 \chardef\Hy@VersionChecked=1 %don't check the version!
137 %\cs_set_protected:Npn \PDF@SetupDoc{}
138 %\PDF@FinishDoc{}% dummy needed for hyperref ...

```

`\hypercalcbp` We define a better (expandable) version of `\hypercalcbp`

```
139 \cs_set_eq:NN \hypercalcbp \dim_to_decimal_in_bp:n
```

(End definition for `\hypercalcbp`. This function is documented on page ??.)

This command must be provided for now, but they are unused by the driver:

```
140 \providecommand\@pdfborder{}
141 \providecommand\@pdfborderstyle{}
142 \newcommand\OBJ@OCG@view {} % needed in hyperref
143 \def\Hy@numberline#1{#1\c_space_tl} %needed by bookmark
```

The pdfversion should be set in `\DeclareDocumentMetadata` but we must copy it to the `hyperref` command:

```
144 \cs_set_eq:NN \Hy@pdfminorversion \pdf_version_minor:
145 \cs_set_eq:NN \Hy@pdfmajorversion \pdf_version_major:
146 \legacy_if:nT { Hy@setpdfversion }
147 {
148   \msg_warning:nn { hyp }{ pdfversion-disabled }
149 }
150 \Hy@DisableOption{pdfversion}
```

`\Acrobatmenu` should use the new internal link command

```
151 \RenewDocumentCommand \Acrobatmenu { m m }
152 {
153   \hyper@linknamed {#1} {#2}
154 }
```

`\hypersetup` should set the new keys. We can't also execute `\kvsetkeys{Hyp}` as this errors for example with colors. This means the driver has to provide new code for every key!

```
155 % TODO should go at some time ...
156 % \kv@set@family@handler{Hyp}
157 % { \msg_warning:nnx {hyp}{unknown-key-to-Hyp}{#1} }
158 \cs_set_protected:Npn \hypersetup #1
159 {
160   %\kvsetkeys{Hyp} {#1}
161   \keys_set:nn { hyp / setup }{ #1 }
162 }
163 % TODO for now unknown keys should only give warnings.
164 \keys_define:nn { hyp / setup }
165 {
166   unknown .code:n =
167   {
168     \msg_warning:nnxxx { hyp } { unknown-key }
169     { hyp~/~setup }{ \l_keys_key_str } { #1 }
170   }
171 }
```

Allow non-ascii in href, and add more href versions. We add a few new keys: `urlencode` to force percent encoding (`\hrefurl`, `\href`) `protocol` to add a protocol (`\hrefurl`, `\href` doesn't work here as it needs the colon for the split and the guessing.) `destination` to add a destination (`\hrefpdf`)

```
172
173 \bool_new:N \l__hyp_href_url_encode_bool
174 \bool_new:N \l__hyp_href_url_ismap_bool
```

```

175 \tl_new:N \l__hyp_href_url_protocol_tl
176 \tl_new:N \l__hyp_href_pdf_destination_tl
177 \tl_new:N \l__hyp_href_pdf_page_tl
178 \tl_new:N \l__hyp_href_run_parameter_tl

336   }

```

```

337 \hyper@normalise\__hyp_href_url_aux:n
338 }
339
340 \cs_new_protected:Npn \__hyp_href_url_aux:n #1
341 {
342   \exp_args:Nno
343     \hyper@linkurl{\__hyp_href_url_format {#1}}
344     {\l__hyp_href_url_protocol_tl#1}
345   \group_end:
346   \hook_use:n{cmd/url/after}
347 }
348

```

the `\urldef` command doesn't like the optional argument, so we overwrite locally the `\url` command here:

```

349
350 \def\urldef#1#2{\begingroup\def\url{\hyper@normalise\url@}\setbox\z@\hbox\bgroup
351   \def\Url@HyperHook##1\endgroup{\Url@def{#1}{#2}}}%
352   % Because hyperref breaks \urldef and does not define its own (Grrrr!)...
353   \def\url@##1{\egroup\endgroup\DeclareRobustCommand#1{#2{##1}}}%
354   #2}
355

```

make the new commands compatible with `\pdfstringdef`:

```

356 \NewExpandableDocumentCommand\__hyp_secondoftwowithopt:wnn {omm}{#3}
357 \pdfstringdefDisableCommands{\let\hrefurl\__hyp_secondoftwowithopt:wnn}
358 \pdfstringdefDisableCommands{\let\hrefpdf\__hyp_secondoftwowithopt:wnn}
359 \pdfstringdefDisableCommands{\let\hrefrun\__hyp_secondoftwowithopt:wnn}

```

## 4 Compatibility commands

### 4.1 Metadata

A number of values should be accessible from other packages. Until now packages like `hyperxmp` used variables like `@pdfauthor`. As they are gone we need to provide some other access.

```

360 \cs_new_protected:Npn \__hyp_store_metadata:nn #1 #2 %#1 key, #2 value.
361 {
362   %\tl_set:cn {@#1}{#2}
363   \AddToDocumentProperties[hyperref]{#1}{#2}
364 }
365 \cs_generate_variant:Nn \__hyp_store_metadata:nn {xn,nx,xx}

```

### 4.2 citecolor

`cite` is a link context. So we define a hook, and the keys in terms of this hook.

```

366 \hook_new:n{hyp/link/cite}
367 \color_set:nmn {hyp/color/cite}{HTML}{2E7E2A}
368 \color_set:nm {hyp/color/citeborder}{hyp/color/cite!60!white}
369 \keys_define:nn { hyp / setup }
370 {
371   ,citecolor .code:n = {\__hyp_color_set:ne {hyp/color/cite}{#1}}
372   ,citebordercolor

```

```

373     .code:n = {\__hyp_color_set:ne {hyp/color/citeborder}{#1}}
374   }
375   \hook_gput_code:nnn { hyp/link/cite }{hyp/cite}
376   {
377     \keys_set:nn { hyp / setup }
378     {
379       ,linkbordercolor= hyp/color/citeborder
380       ,linkcolor      = hyp/color/cite
381     }
382   }

```

## 5 Checks

The driver can not work properly if the pdfmanagement is not active, as keys need to write to the catalog and to info. But annotations and outlines should work. So should this be a fatal error? Should there be a difference between missing and inactive management? TODO

```

383   \bool_lazy_and:nnF
384   { \cs_if_exist_p:N \pdfmanagement_if_active_p: }{ \pdfmanagement_if_active_p: }
385   { \msg_error:nn { hyp}{ missing-resource-management } }

```

Outlines/bookmarks require the bookmark package. TODO check pdfpagemode if bookmarks are suppressed.

```

386   \legacy_if:nT { Hy@bookmarks }
387   {
388     \AddToHook{begindocument/before}[hyperref/bookmark]{\RequirePackage{bookmark}}
389   }
390   \legacy_if:nT { Hy@draft }
391   {
392     \PassOptionsToPackage{draft}{bookmark}
393   }

```

## 6 Reference and label commands

The code uses the l3ref-tmp package which must have been loaded as pdfmanagement is a requirement. The commands use after the module prefix always `_ref`.

At first a label command which add the space commands from LaTeX:

```

\__hyp_ref_label:nn
\__hyp_ref_if_exist:nn 394 %
\__hyp_ref_check:nn    395 \cs_new_protected:Npn \__hyp_ref_label:nn #1 #2 %label/attributes
\__hyp_ref_value:nn    396 {
397   \@bsphack
398   \ref_label:nn{#1}{#2}
399   \@esphack
400 }
401 \cs_generate_variant:Nn \__hyp_ref_label:nn {en}

```

This provides a condition which tests if a label/attribute combination is known

```

402 \prg_new_eq_conditional:Nn \__hyp_ref_if_exist:nn \ref_if_exist:nn { p , T , F , TF }
403 \prg_generate_conditional_variant:Nnn \__hyp_ref_if_exist:nn {en} { p , T , F , TF }

```

This checks if the label/attribute is known and issues a warning if not. It then also triggers the standard rerun message.

```

404 \cs_new_protected:Npn \__hyp_ref_check:nn #1 #2 %label/attribute
405 {
406   \__hyp_ref_if_exist:nnF {#1}{#2}
407   {
408     \protect\G@refundefinedtrue
409     \@latex@warning
410     {
411       Reference~‘\tl_to_str:n {#1}’~with~attribute~‘\tl_to_str:n {#2}’~
412       on~page~\thepage~\space undefined
413     }
414   }
415 }
416 \cs_generate_variant:Nn \__hyp_ref_check:nn {en}

```

This retrieves a value, it is a simple wrapper around the `\ref_value:nn`

```

417 \cs_new:Npn \__hyp_ref_value:nn #1 #2
418 {
419   \ref_value:nn{#1}{#2}
420 }
421 \cs_generate_variant:Nn \__hyp_ref_value:nn {en}

```

(End definition for `\__hyp_ref_label:nn` and others.)

## 7 Variables

### 7.1 Private temporary variables

At first a few generic tmp variables

```

\l__hyp_tmpa_tl
\l__hyp_tmpa_seq 422 \box_new:N \l__hyp_tmpa_box
\l__hyp_tmpa_int 423 \tl_new:N \l__hyp_tmpa_tl
\l__hyp_tmpa_box 424 \seq_new:N \l__hyp_tmpa_seq
\l__hyp_tmpa_str 425 \int_new:N \l__hyp_tmpa_int
426 \str_new:N \l__hyp_tmpa_str

```

(End definition for `\l__hyp_tmpa_tl` and others.)

A number of more specific tmp variables. These will perhaps disappear or change.

```

\l__hyp_dest_name_tmpa_tl  TODO: document and check use!
\l__hyp_uri_tmpa_tl        427 \tl_new:N \l__hyp_dest_name_tmpa_tl
\l__hyp_filename_tmpa_tl   428 \tl_new:N \l__hyp_uri_tmpa_tl
\__hyp_text_tmpa_str_uuu\g__hyp_text_tmpa_str 429 \tl_new:N \l__hyp_filename_tmpa_tl
430 \tl_new:N \l__hyp_para_tmpa_tl
431 \str_new:N \l__hyp_text_tmpa_str
432 \str_new:N \g__hyp_text_tmpa_str

```

(End definition for `\l__hyp_dest_name_tmpa_tl` and others.)

## 7.2 Constants

`\c__hyp_dest_undefined_tl` This variable is used if a destination name is empty.

```
433 \tl_const:Nn \c__hyp_dest_undefined_tl {UNDEFINED}
```

(End definition for `\c__hyp_dest_undefined_tl`.)

`\c__hyp_annot_types_seq` This constants holds the link types managed by hyperref along with a mapping from  
`\c__hyp_map_annot_hyp_prop` annot names to hyperref names and back.  
`\c__hyp_map_hyp_annot_prop`

```
434 \seq_const_from_clist:Nn \c__hyp_annot_types_seq
435 {url,link,file,menu,run}
436 \prop_const_from_keyval:Nn \c__hyp_map_annot_hyp_prop
437 {
438   URI    = url,
439   GoTo    = link,
440   GoToR   = file,
441   Named   = menu,
442   Launch  = run
443 }
444 \prop_const_from_keyval:Nn \c__hyp_map_hyp_annot_prop
445 {
446   url     = URI,
447   link    = GoTo,
448   file    = GoToR,
449   menu    = Named,
450   run     = Launch
451 }
452
```

(End definition for `\c__hyp_annot_types_seq`, `\c__hyp_map_annot_hyp_prop`, and `\c__hyp_map_hyp_annot_prop`.)

## 7.3 Variables

`\g__hyp_dest_pdfstartpage_tl` The first holds the (absolute) start page number, the other the startview instruction for  
`\g__hyp_dest_pdfstartview_tl` the current and remote files. The instruction is in “PDF format” but without the leading  
`\l__hyp_dest_pdfremotestartview_tl` slash!

```
453 \tl_new:N \g__hyp_dest_pdfstartpage_tl
454 \tl_new:N \g__hyp_dest_pdfstartview_tl
455 \tl_new:N \l__hyp_dest_pdfremotestartview_tl
```

(End definition for `\g__hyp_dest_pdfstartpage_tl`, `\g__hyp_dest_pdfstartview_tl`, and `\l__hyp_dest_pdfremotestartview_tl`.)

It is still unclear which str convert option is the best in the various places, so we use a variable to allow tests and perhaps external configuration. The “print” type should always have the delimiters.

```
\l__hyp_text_enc_uri_print_tl
\l__hyp_text_enc_info_print_tl
456 \tl_new:N \l__hyp_text_enc_uri_print_tl
\l__hyp_text_enc_dest_print_tl
457 \tl_new:N \l__hyp_text_enc_info_print_tl
\l__hyp_text_enc_dest_print_tl
458 \tl_new:N \l__hyp_text_enc_dest_print_tl
\l__hyp_text_enc_file_print_tl
459 \tl_new:N \l__hyp_text_enc_dest_print_tl
\l__hyp_text_enc_file_print_tl
460 \tl_new:N \l__hyp_text_enc_file_print_tl
\l__hyp_text_enc_para_print_tl
461 \tl_new:N \l__hyp_text_enc_para_print_tl
```

```

462
463 \tl_set:Nn \l__hyp_text_enc_uri_print_tl {utf8/URI}
464 \tl_set:Nn \l__hyp_text_enc_info_print_tl {utf16/hex}
465 \tl_set:Nn \l__hyp_text_enc_dest_tl {utf8/string-raw}
466 \tl_set:Nn \l__hyp_text_enc_dest_print_tl {utf8/string}
467 \tl_set:Nn \l__hyp_text_enc_file_print_tl {utf8/string}
468 \tl_set:Nn \l__hyp_text_enc_para_print_tl {utf8/string}

```

(End definition for `\l__hyp_text_enc_uri_print_tl` and others.)

`\l__hyp_dest_pdfview_tl` This hold the destination instructions in a format suitable for `\pdf_destination:nn`. The special value `fitrbox` indicates a boxed destination.

```

469 \tl_new:N \l__hyp_dest_pdfview_tl

```

(End definition for `\l__hyp_dest_pdfview_tl`.)

`hyp/annot/link` (*color name*) These color names are used for the annotations (colorlinks). They are initialized at the end when the color scheme is used

`hyp/annot/url` (*color name*)

`hyp/annot/file` (*color name*)

`hyp/annot/run` (*color name*)

`hyp/annot/menu` (*color name*)

This holds the export model for border color etc. It is currently either `space-sep-cmyk` or `space-sep-rgb`. The default is the second. It can be change by the key `bordercolormodel`

```

470 \str_new:N \g__hyp_bordercolormodel_str

```

(End definition for `\g__hyp_bordercolormodel_str`.)

## 7.4 Booleans

`\l_hyp_annot_colorlink_bool` These booleans are needed to control the colors. They are public so that other packages can query the state too.

`\l_hyp_annot_colorurl_bool`

`\l_hyp_annot_colorfile_bool`

`\l_hyp_annot_colorrun_bool`

`\l_hyp_annot_colormenu_bool`

```

471 \seq_map_inline:Nn \c__hyp_annot_types_seq

```

```

472 {

```

```

473   \bool_new:c {l_hyp_annot_color#1_bool}

```

```

474 }

```

(End definition for `\l_hyp_annot_colorlink_bool` and others. These variables are documented on page ??.)

`\l_hyp_annot_ocgcolorlink_bool`

`\l_hyp_annot_ocgcolorurl_bool`

`\l_hyp_annot_ocgcolorfile_bool`

`\l_hyp_annot_ocgcolorrun_bool`

`\l_hyp_annot_ocgcolormenu_bool`

These booleans are needed to control the ocgcolors. They are public so that other packages can query the state too.

```

475 \seq_map_inline:Nn \c__hyp_annot_types_seq

```

```

476 {

```

```

477   \bool_new:c {l_hyp_annot_ocgcolor#1_bool}

```

```

478 }

```

(End definition for `\l_hyp_annot_ocgcolorlink_bool` and others. These variables are documented on page ??.)

`\l_hyp_annot_Named_bool`

This booleans are used to disable some link types while keeping others.

```

479 \seq_map_inline:Nn \c_pdfannot_link_types_seq

```

```

480 {

```

```

481   \bool_new:c {l__hyp_annot_#1_bool}

```

```

482   \bool_set_true:c {l__hyp_annot_#1_bool}

```

```

483 }

```

(End definition for `\l__hyp_annot_GoTo_bool` `\l__hyp_annot_URI_bool` `\l__hyp_annot_GoToR_bool` `\l__hyp_annot_Named_bool` `\l__hyp_annot_Launch_bool`.)

## 7.5 Boxes

`\l__hyp_dest_box` This holds an (empty) box which is used to get the width for FitR destinations.

```
484 \box_new:N \l__hyp_dest_box
```

(End definition for `\l__hyp_dest_box`.)

## 7.6 Regex

`\c__hyp_dest_startview_regex` This regex is used to extract the right arguments pdfstartview and pdfremotestartview. Their values is filled up with null and then the start extracted.

```
485 \regex_const:Nn \c__hyp_dest_startview_regex
486 {
487   \A\ *
488   (?:
489     (?:XYZ (?:\ +(?:\d+|\d*\.\d+)|null)){3}\ )
490     |
491     (?:Fit\b|FitB\b)
492     |
493     (?:\b(?:FitH|FitV|FitBH|FitBV)(?:\ +(?:\d+|\d*\.\d+)|\ +null){1})
494     |
495     (?:FitR (?:\ +\d+|\ +\d*\.\d+){4}\ )
496   )
497 }
```

(End definition for `\c__hyp_dest_startview_regex`.)

## 7.7 PDF dictionaries

`l__hyp_page/Trans` This dictionary is used for page transitions.

```
498 \pdfdict_new:n {l__hyp_page/Trans}
499 \pdfdict_put:nnn {l__hyp_page/Trans}{Type}{/Trans}
```

(End definition for `l__hyp_page/Trans`.)

## 8 PDF string conversion

This defines a command which is used to replace `\pdfstringdef`. This is probably temporary and will be adjusted or replaced if some more generic PDF string command/module exists. All commands here use the “submodule” name `text`. At first a hook for user additions:

`hyp/text/pdfstring`

```
500 \hook_new:n {hyp/text/pdfstring}
```

(End definition for `hyp/text/pdfstring`. This function is documented on page ??.)

The first step to convert input in a PDF string is to purify it, that means to remove/expand commands. As the whole process is not expandable anyway we can use a protected command. The “output” is a string:

`\__hyp_text_purify:nN`

```

501 \cs_new_protected:Npn \__hyp_text_purify:nN #1 #2 %#1 input, #2 str command
502 {
503   \str_set:Nx #2 {\text_purify:n { #1 } }
504 }

```

*(End definition for \\_\_hyp\_text\_purify:nN.)*

The second step is to cleanup the output of the first step. This is a dummy currently. The argument should be a string variable.

`\__hyp_text_cleanup:N`

```

505 \cs_new_protected:Npn \__hyp_text_cleanup:N #1
506 {
507
508 }

```

*(End definition for \\_\_hyp\_text\_cleanup:N.)*

The last step converts the string to a PDF encoding. As we have at least two targets (hex and literal) there is an argument. The conversion assumes utf8 input, it is based on `cspdf_string_from_unicode:nnN` in `l3pdfutils`.

#2 is str variable, #1 should be one of

utf8/string	(lit) (utf8/string)
utf8/string-raw	lit (utf8/string)
utf8/URI	(percent encoded url)
utf8/URI-raw	percent encoded url
utf16/hex	<HEX> (utf16/hex)
utf16/hex-raw	HEX (utf16/hex)
utf16/string	(lit) (utf16/string)
utf16/string-raw	lit (utf16/string)

`\__hyp_text_string_from_unicode:nN`

```

509 \cs_new_protected:Npn \__hyp_text_string_from_unicode:nN #1 #2
510 {
511   \pdf_string_from_unicode:nVN { #1 } #2 #2
512 }

```

*(End definition for \\_\_hyp\_text\_string\_from\_unicode:nN.)*

This command combines everything. #1=input, #2= handler shortcut #3= output str variable The commands uses a group to locally set `\Hy@pdfstringtrue` so that `\texorpdfstring` works and other local settings can be done.

`\__hyp_text_pdfstring:nnN`

```

513 \cs_new_protected:Npn \__hyp_text_pdfstring:nnN #1 #2 #3
514 {
515   \group_begin:
516   \Hy@pdfstringtrue
517   \hook_use:n {hyp/text/pdfstring}
518   \__hyp_text_purify:nN { #1 } \l__hyp_text_tmpa_str
519   \__hyp_text_cleanup:N \l__hyp_text_tmpa_str
520   \__hyp_text_string_from_unicode:nN { #2 } \l__hyp_text_tmpa_str
521   \str_gset_eq:NN \g__hyp_text_tmpa_str \l__hyp_text_tmpa_str
522   \group_end:
523   \str_set_eq:NN #3 \g__hyp_text_tmpa_str
524 }
525 \cs_generate_variant:Nn \__hyp_text_pdfstring:nnN {xnN,onN,xoN,ooN,noN}

```

```
(End definition for \_hyp\_text\_pdfstring:nnN.)
!!! temporary until all instances are gone
526 \cs_new_protected:Npn \Hy@pstringdef #1 #2
527 { \_hyp\_text\_pdfstring:xnN {#2} {utf8/string-raw}#1 }
This is a special version for info keys:
```

```
\_hyp\_text\_pdfstring\_info:nN
528 \cs_new_protected:Npn \_hyp\_text\_pdfstring\_info:nN #1 #2
529 {
530   \_hyp\_text\_pdfstring:nonN { #1 } { \l\_hyp\_text\_enc\_info\_print\_tl } #2
531 }
```

```
(End definition for \_hyp\_text\_pdfstring\_info:nN.)
```

## 9 Pagelabels

Page labels are representations of the page numbers in the PDF viewer. If the hyperref options `pdfpagelabels` is true (the default) roman numbers are e.g. shown as “ii (2/58)”. To do this the page ranges must be collected, if possible a prefix and the numbering of the counter must be identified and then written to the catalog.

The current implementation in `hyperref/hyperref` drivers:

**xetex:** `hxdetex.def`, line 80-110

`\HyPL@StorePageLabel` writes to the aux-file at begin document (after reading the aux) `\HyPL@SetPageLabels` is called (defined in `hyperref.sty` after the driver loading) which calls `\Hy@PutCatalog{/PageLabels<</Nums[\HyPL@Labels]>>}`

**dvips:** identical to `xetex`, line 60 to 90 in `pdfmark.def`

**dvipdfm:** identical to `xetex`

**pdftex:** `\HyPL@StorePageLabel` stores in `\HyPL@Labels` in the first compilation In `\AtVeryEndDocument` `\HyPL@SetPageLabels` is called.

**luatex** identical to `pdftex`

The code in `hyperref` inspects `\thepage` and tries to figure out the numbering system and the prefix. E.g. A-28 is correctly split. If the counter can not be identified `hyperref` generates only `/P` entries with the whole content.

The new implementation makes use of the pdf management: The relevant entry in the catalog is continuously updated and pushed out at the end of the document. This works (hopefully ...) with all drivers.

We do not try to avoid the (in `hyperref`’s wording) “useless” pagelabel entry `/PageLabels <</Nums[0<</S/D>>]>>` (but it would be possible), we also don’t test for empty `\thepage`, `hyperref` seems to handle this fine and the pdf is valid.

The code has to define `\Hy@PutCatalog` as we can’t yet change code in `hyperref`. The switch for `draftmode` has been removed.

```
\_hyp\_PageLabels\_gpush:
  \Hy@PutCatalog
  \HyPL@StorePageLabel
532 \cs_new_protected:Npn \_hyp\_PageLabels\_gpush:
533 {
534   \pdfmanagement\_add:nnx {Catalog} {PageLabels}{<</Nums[\HyPL@Labels]>>}
```

```

535 }
536
537 \def\Hy@PutCatalog #1 {}
538
539
540 \legacy_if:nT { Hy@pdfpagelabels }
541 {
542   \cs_set_protected:Npn \HyPL@StorePageLabel #1
543   {
544     \tl_gput_right:Nx \HyPL@Labels { \the\Hy@abspage<<#1>> }
545     \__hyp_PageLabels_gppush:
546   }
547 }

```

(End definition for `\__hyp_PageLabels_gppush:`, `\Hy@PutCatalog`, and `\HyPL@StorePageLabel`. These functions are documented on page ??.)

## 10 Core Hyperref Commands

Every hyperref has to define eight core command:

```

\hyper@anchor
\hyper@anchorstart
\hyper@anchorend
\hyper@link      %GoTo
\hyper@linkstart %GoTo
\hyper@linkend   %GoTo
\hyper@linkfile  %GoToR
\hyper@linkurl   %URI

```

This driver defines for consistency also `\hyper@linklaunch` for Launch and `\hyper@linknamed` for Named.

### 10.1 Anchors / destinations

The first three commands are needed for “anchors”. At first the internal commands to create a destination. It uses `\Hy@WrapperDef` to make it babel safe, it is not clear if this is still needed, but we leave it for now.

---

```

\__hyp_destination:nn \__hyp_destination:nn {<destination name>} {<location>}

```

---

The `<destination name>` is encoded with the method stored in `\l__hyp_text_enc_dest_tl`. The location should be one of `fit`, `fith`, `fitv`, `fitbv`, `fitbh`, `fitr`, `xyz`, `fitrbx`. The last will make use of `\l__hyp_dest_box`

```

\__hyp_destination:nn

548 \Hy@WrapperDef \__hyp_destination:nn #1 #2
549 {
550   \mode_if_horizontal:T { \@savs\spacefactor }
551   \Hy@SaveLastskip      %defined in hyperref
552   \Hy@VerboseAnchor{#1} %defined in hyperref, for debugging
553   \__hyp_text_pdfstring:xoN
554   { \HyperDestNameFilter{#1} }

```

```

555     { \l__hyp_text_enc_dest_tl }
556     \l__hyp_tmpa_tl
557 \str_if_eq:nnTF {#2} {fitrbox}
558 {
559     \exp_args:NV
560     \pdf_destination:nnnn \l__hyp_tmpa_tl
561     { \box_wd:N \l__hyp_dest_box }
562     { \box_ht:N \l__hyp_dest_box }
563     { \box_dp:N \l__hyp_dest_box }
564 }
565 {
566     \exp_args:NV
567     \pdf_destination:nf
568     { \l__hyp_tmpa_tl }
569     { #2 }
570 }
571 \Hy@RestoreLastskip %defined in hyperref
572 \mode_if_horizontal:T { \spacefactor\@savsf }
573 }

```

(End definition for `\__hyp_destination:nn`.)

This are the three destinations commands. They are modelled along the xetex version. It is not quite clear if really all three are needed for the backends supported by this driver, but changing the hyperref code would be difficult. We add a hook. This allows e.g. the tagging code to create also a structured destination. We don't use the cmd hook, as we want the same hook for both start commands. We make the current dest name available so that the hook code can use it.

```

\hyper@anchor
\hyper@anchorstart 574 \tl_new:N\l_hyp_current_dest_name_tl
\hyper@anchorend 575 \hook_new:n{hyp/anchor}
hyp/anchor 576 \cs_new_protected:Npn \hyper@anchor #1
\l_hyp_current_dest_name_tl 577 {
578     \exp_args:NnV
579     \__hyp_destination:nn {#1} \l__hyp_dest_pdfview_tl
580     \tl_set:Nn \l_hyp_current_dest_name_tl {#1}
581     \hook_use:n{hyp/anchor}
582 }
583
584 \cs_new_protected:Npn \hyper@anchorstart #1
585 {
586     \Hy@activeanchortrue
587     \exp_args:NnV
588     \__hyp_destination:nn {#1} \l__hyp_dest_pdfview_tl
589     \tl_set:Nn \l_hyp_current_dest_name_tl {#1}
590     \hook_use:n{hyp/anchor}
591 }
592
593 \cs_new_protected:Npn \hyper@anchorend
594 {
595     \Hy@activeanchorfalse
596 }

```

(End definition for `\hyper@anchor` and others. These functions are documented on page ??.)

## 10.2 GoTo Links

The next three commands are for links inside the document, to destinations (GoTo links). The definition in `hyperref` have a first argument which can be used to pass a semantical context. Currently this argument is only used for `\cite` and only to change the color. The new implementation uses it for a real hook.

At first the internal link commands:

```

597 \cs_new_protected:Npn \__hyp_link_goto_begin:nw #1
598 {
599   \mode_leave_vertical:
600   \protected@edef \l__hyp_dest_name_tmpa_tl { #1 }
601   \tl_if_empty:NTF \l__hyp_dest_name_tmpa_tl
602   {
603     \msg_warning:nnx
604     { hyp }
605     { empty-destination-name }
606     { \c__hyp_dest_undefined_tl }
607     \tl_set_eq:NN \l__hyp_dest_name_tmpa_tl \c__hyp_dest_undefined_tl
608   }
609   {
610     \__hyp_text_pdfstring:xoN
611     { \exp_args:No \HyperDestNameFilter { \l__hyp_dest_name_tmpa_tl } }
612     { \l__hyp_text_enc_dest_tl }
613     \l__hyp_dest_name_tmpa_tl
614   }
615   \exp_args:No
616   \pdfannot_link_goto_begin:nw { \l__hyp_dest_name_tmpa_tl }
617 }
618
619 \cs_new_protected:Npn \__hyp_link_goto_end:
620 {
621   \pdfannot_link_goto_end:
622 }
```

Now the three `hyperref` commands. The splitted commands `\hyper@linkstart` and `\hyper@linkend` are used for footnotemarks, toc and natbib-cites.

---

**`\hyper@link`** `\hyper@link{<context>}{<destination name>}{<link text>}`

This creates a complete GoTo link around the `<link text>` pointing to `<destination name>`. The hook `hyp/link/<context>` is executed at the begin if it exists.

The only `<context>` for which a hook is predefined is `cite`. Packages which want to use another `<context>` should initialize the hook like this:

```

\IfHookExistsTF{hyp/link/context}{ }
{ \NewHook{hyp/link/context} }
```

The hook code is executed in a group but before all the pdfannot hooks.

---

<code>\hyper@linkstart</code> <code>\hyper@linkend</code>	<code>\hyper@linkstart{&lt;context&gt;}{&lt;destination name&gt;}</code> <code>\hyper@linkend</code>
--	---

---

This creates the start and end commands for a GoTo link around the text between both pointing to *<destination name>*. The hook `hyp/link/<context>` is executed at the begin if it exists as with `\hyper@link`

The commands open and close a group, so should be placed carefully. .

`hyperref` adds a group with `\Hy@colorlink`, we move this outside the link so that it groups the context hook too. We store again the destination name in the public `tl\_l\_hyp\_current\_dest\_name\_tl` so that the hook code can make use of it

```

623
624 \cs_new_protected:Npn \hyper@link #1 #2 #3 {%#1 context, #2=destination name, #3 content
625 {
626   \bool_if:NTF \l__hyp_annot_GoTo_bool

752     }
753     \group_end:
754 }
755 {\let\protect\relax#1}}
756 }

```

## 10.5 Launch links

We define \hyper@linklaunch for naming consistency

```

757 \pdfdict_new:n {l_hyp/annot/A/Launch}
758 \pdfdict_put:nnn {l_hyp/annot/A/Launch}{Type}{/Action}
759 \pdfdict_put:nnn {l_hyp/annot/A/Launch}{S}{/Launch}
760

```

```

761 \cs_new_protected:Npn \hyper@linklaunch #1 #2 #3 % filename, link text, Parameters
762 {
763   \bool_if:NTF \l__hyp_annot_Launch_bool
764   {
765     \group_begin:
766       \__hyp_text_pdfstring:nnN
767       { #1 }
768       { \l__hyp_text_enc_file_print_tl }
769       \l__hyp_filename_tmpa_tl
770       \pdfdict_put:nno {l_hyp/annot/A/Launch}{F}{\l__hyp_filename_tmpa_tl}
771       \__hyp_text_pdfstring:noN
772       { #3 }
773       { \l__hyp_text_enc_para_print_tl }
774       \l__hyp_para_tmpa_tl
775     \bool_if:nTF
776     {
777       \str_if_eq_p:Vn \l__hyp_para_tmpa_tl {}
778       ||
779       \pdf_version_compare_p:Nn > {1.9}
780     }
781     {
782       \pdfdict_remove:nn {l_hyp/annot/A/Launch}{Win}
783     }
784     {
785       \pdfdict_put:nnx {l_hyp/annot/A/Launch}{Win}
786       {<</P \l__hyp_para_tmpa_tl /F \l__hyp_filename_tmpa_tl >>}
787     }
788     \mode_leave_vertical:
789     \pdfannot_dict_put:nnx {link/Launch}{A}{<<\pdfdict_use:n {l_hyp/annot/A/Launch}>>}
790     \pdfannot_link:nxn
791     { Launch }
792     {
793       % /A
794       % <<
795       % \pdfdict_use:n {l_hyp/annot/A/Launch}
796       % >>
797     }
798     {
799       \let\protect\relax
800       #2\Hy@xspace@end
801       \Hy@VerboseLinkStop %where is the start??
802     }
803     \group_end:
804   }
805   {\let\protect\relax#2}}
806 }

```

The actually command used by hyperref is `\@hyper@launch` which uses a delimited argument, because of the color the definition is a bit convoluted.

```

807 \use:x
808 { % filename, anchor text, linkname
809   \cs_set_protected:Npn \exp_not:N \@hyper@launch run \c_colon_str ##1 \exp_not:N \ \ ##2 #
810 }
811 {

```

```

812     \hyper@linklaunch {#1}{#2}{#3}
813 }

```

## 10.6 Named links (menu)

We also define `\hyper@linknamed` for consistency.

```

814 \pdfdict_new:n {l_hyp/annot/A/Named}
815 \pdfdict_put:nnn {l_hyp/annot/A/Named}{Type}{/Action}
816 \pdfdict_put:nnn {l_hyp/annot/A/Named}{S}{/Named}
817
818 \cs_new_protected:Npn \hyper@linknamed #1 #2 % #1 action, #2 link text
819 {
820   \bool_if:NTF \l__hyp_annot_Named_bool
821   {
822     \group_begin:
823     \pdfmeta_standard_verify:nnTF {named_actions}{#1}
824     {
825       \mode_leave_vertical:
826       \pdfdict_put:nnx {l_hyp/annot/A/Named}{N}
827       {\pdf_name_from_unicode_e:n{#1}}
828       \pdfannot_dict_put:nnx {link/Named}{A}{<<\pdfdict_use:n {l_hyp/annot/A/Named}>>}
829       \pdfannot_link:nnx { Named }
830       {
831         % /A
832         % <<
833         % \pdfdict_use:n { l_hyp/annot/A/Named }
834         % >>
835       }
836       {
837         #2
838         \Hy@xspace@end
839         \Hy@VerboseLinkStop
840       }
841     }
842     {
843       \msg_warning:nnn { hyp } { pdfa-no-named-action }{#1}
844       #2
845     }
846     \group_end:
847   }
848   {\let\protect\relax#2}
849 }
850

```

## 11 Link decorations

### 11.1 Functions to export and select colors

We support two input syntax: color expressions and model with values.

---

`\_hyp_color_export:nnN` `\_hyp_color_export:nnN {<color>} {<export format>} <tlvar>`

This exports a color as space separated numbers as needed in in /C. {<color>} should have either the format [model]{value} or be a color expression. For examples: [rgb]{1,0,.5} or red!50!blue. The export format is either space-sep-cmyk or space-sep-rgb.

`\_hyp_color_export:nnN` Color keys need to parse color expressions. Two input types are supported: color=[rgb]{1,0,.5} and color=red!50!blue. The colors are exported to PDF syntax (space separated numbers).

```

851 \cs_new_protected:Npn \_hyp_color_export:nnN #1 #2 #3
852 {
853   \tl_if_head_eq_charcode:nNTF {#1}[ %]
854   {
855     \_hyp_color_export_aux:wnnN #1 {#2} #3
856   }
857   {
858     \color_export:nnN {#1} {#2} #3
859   }
860 }
861
862 \cs_new_protected:Npn \_hyp_color_export_aux:wnnN [#1] #2 #3 #4
863 {
864   \color_export:nnnn {#1}{#2}{#3}#4
865 }
866
867 \cs_generate_variant:Nn \_hyp_color_export:nnN {xVN}

```

(End definition for `\_hyp_color_export:nnN` and `\_hyp_color_export_aux:wnnN`.)

---

`\_hyp_color_select:n` `\_hyp_color_select:nN {<color>}`

These commands select a (text) color. {<color>} should have either the format [model]{value} or be a color expression. For examples: [rgb]{1,0,.5} or red!50!blue

`\_hyp_color_select:n` Color keys need to parse color expressions. Two input types are supported: color=[rgb]{1,0,.5} and color=red!50!blue.

```

868 \cs_new_protected:Npn \_hyp_color_select:n #1
869 {
870   \tl_if_head_eq_charcode:nNTF {#1}[ %]
871   {
872     \_hyp_color_select_aux:wn #1
873   }
874   {
875     \color_select:n {#1}
876   }
877 }
878
879 \cs_new_protected:Npn \_hyp_color_select_aux:wn [#1] #2
880 {
881   \color_select:nn {#1}{#2}
882 }
883
884 \cs_generate_variant:Nn \_hyp_color_select:n {e}

```

(End definition for `\_hyp_color_select:n` and `\_hyp_color_select_aux:wn`.)

---

```
\_hyp_color_set:nn \_hyp_color_set:nN {\ name } {\ color }
```

---

These commands store the color in `{\name}`. `{\color}` should have either the format `[model]{value}` or be a color expression. For examples: `[rgb]{1,0,.5}` or `red!50!blue`

```
\_hyp_color_set:nn \_hyp_color_set_aux:nwn
```

Color keys need to parse color expressions. Two input types are supported: `color=[rgb]{1,0,.5}` and `color=red!50!blue`.

```
885 \cs_new_protected:Npn \_hyp_color_set:nn #1 #2
886 {
887   \tl_if_head_eq_charcode:nNTF {#2}[ %]
888   {
889     \_hyp_color_set_aux:nwn { #1 } #2
890   }
891   {
892     \color_set:nn {#1} {#2}
893   }
894 }
895
896 \cs_new_protected:Npn \_hyp_color_set_aux:nwn #1 [#2] #3
897 {
898   \color_set:nnn {#1}{#2}{#3}
899 }
900
901 \cs_generate_variant:Nn \_hyp_color_set:nn {ne}
```

(End definition for `\_hyp_color_set:nn` and `\_hyp_color_set_aux:nwn`.)

## 11.2 Textcolor of links

colors are added in the hooks. This means that they can also be removed if needed. They add a group—this isn't needed with `hyperref` code, but could be relevant with low-level annotations.

```
902 \prop_map_inline:Nn \c__hyp_map_hyp_annot_prop
903 {
904   \hook_gput_code:nnn
905     {pdfannot/link/#2/begin}
906     {hyp/color}
907   {
908     \bool_if:cT { l_hyp_annot_color#1_bool }
909     {
910       \group_begin:
911       \color_select:n { hyp/color/#1}
912     }
913   }
914   \hook_gput_code:nnn
915     {pdfannot/link/#2/end}
916     {hyp/color}
917   {
918     \bool_if:cT { l_hyp_annot_color#1_bool }
919     {
920       \group_end:
921     }
922   }
```

```

922     }
923 }

```

**colorlinks** (*setup key*) This key also resets the border and borderstyle.

```

924 \keys_define:nn { hyp / setup }
925 {
926   ,colorlinks .meta:n =
927   {
928     ,pdfborder={0-0-0}
929     ,pdfborderstyle=
930     ,colorurl =#1
931     ,colorlink =#1
932     ,colorrun =#1
933     ,colormenu =#1
934     ,colorfile =#1
935   }
936   ,colorlinks .default:n = {true}
937 }

```

```

colorurl (setup key)
colorlink (setup key)
colorrun (setup key)
colormenu (setup key)
colorfile (setup key)
urlcolor (setup key)
linkcolor (setup key)
runcolor (setup key)
menucolor (setup key)
filecolor (setup key)
allcolor (setup key)
938 \seq_map_inline:Nn \c__hyp_annot_types_seq
939 {
940   \keys_define:nn { hyp / setup }
941   {
942     ,color#1 .bool_set:c = { l_hyp_annot_color#1_bool }
943     ,#1color .code:n = { \__hyp_color_set:ne {hyp/color/#1}{##1} }
944   }
945 }
946
947 \keys_define:nn { hyp / setup }
948 {
949   ,allcolors .meta:n =
950   {
951     ,urlcolor=#1
952     ,linkcolor=#1
953     ,runcolor=#1
954     ,filecolor=#1
955     ,menucolor=#1
956   }
957   ,allcolors .value_required:n = true
958 }

```

## 11.3 Style and color of borders

### 11.3.1 Border color

The border color is set by link type. The color can be set as rgb (default) or cmyk (unusual). This can be set with the **bordercolormodel** key:

**bordercolormodel** (*setup key*)

```

959 \keys_define:nn { hyp / setup }
960 {
961   ,bordercolormodel .choices:nn =
962   {rgb,cmyk}

```

```

963     { \str_gset:Nn \g__hyp_bordercolormodel_str {space-sep-#1}}
964     ,bordercolormodel .initial:n ={rgb}
965   }

966 \prop_map_inline:Nn \c__hyp_map_hyp_annot_prop
967 {
968   \keys_define:nn { hyp / setup }
969   {
970     #1bordercolor .code:n =
971     {
972       \tl_if_empty:nTF { ##1 }
973       {
974         \pdfannot_dict_remove:nn
975         {link/#2}
976         { C }
977       }
978       {
979         \__hyp_color_export:xVN {##1}\g__hyp_bordercolormodel_str \l__hyp_tmpa_tl
980         \pdfannot_dict_put:nnx
981         {link/#2}
982         { C }
983         { [\l__hyp_tmpa_tl] }

```

## 11.4 ocgcolorlinks

OCG colorlinks need objects and an entry in the catalog. Perhaps the objects need public names to avoid that ocgx2 has to create duplicates? TODO

`\__hyp_ocg_init:` This commands write the objects as needed if ocg links are used. The initialization should happens only once.

```

1094 \cs_new_protected:Npn \__hyp_ocg_init:
1095 {
1096     \pdf_object_new:nn { __hyp/OCG/View } { dict }
1097     \pdf_object_new:nn { __hyp/OCG/Print } { dict }
1098     \pdf_object_new:nn { __hyp/OCG/config } { dict }
1099     \pdf_object_new:nn { __hyp/OCG/refarray } { array }
1100     \pdf_object_write:nx { __hyp/OCG/refarray }
1101     {
1102         \pdf_object_ref:n { __hyp/OCG/View }
1103         \c_space_tl
1104         \pdf_object_ref:n { __hyp/OCG/Print }
1105     }
1106     \pdf_object_write:nn { __hyp/OCG/View }
1107     {
1108         /Type/OCG

```

```

1109         /Name(View)
1110         /Usage
1111         <<
1112             /Print <</PrintState/OFF>>~
1113             /View <</ViewState/ON >>~
1114         >>
1115     }
1116     \pdf_object_write:nn { __hyp/OCG/Print }
1117     {
1118         /Type/OCG

1320     }
1321   }

```

## 11.6 Hiding links

This key disable all appearance keys. The link themselves are still there.

```

hidelinks (setup key)
hidelink (setup key) 1322 \keys_define:nn { hyp / setup }
hideurl (setup key) 1323 {
hidefile (setup key) 1324   hidelinks .meta:n =
hiderun (setup key) 1325   {
hidemenu (setup key) 1326     ,colorlinks      = false
1327     ,ocgcolorlinks = false
1328     ,pdfborder      = { 0~0~0 }
1329     ,pdfborderstyle=
1330   }
1331 }
1332
1333 \seq_map_inline:Nn \c__hyp_annot_types_seq
1334 {
1335   \keys_define:nn { hyp / setup }
1336   {
1337     hide#1 .meta:n =
1338     {
1339       ,color#1      = false
1340       ,ocgcolor#1   = false
1341       ,#1border      = { 0~0~0 }
1342       ,#1borderstyle =
1343     }
1344   }
1345 }

```

## 11.7 color schemes and settings

This define the key for the color schemes and sets the default colors.

```

colorscheme (setup key)
1346 \keys_define:nn { hyp / setup }
1347 {
1348   colorscheme .code:n =
1349   {
1350     \prop_map_inline:cn { c__hyp_colorscheme_#1_prop }
1351     {
1352       \keys_set:nn { hyp /setup }
1353       {
1354         ##1 = ##2
1355       }
1356     }

```

```

1357     }
1358   }
1359   \keys_set:nn { hyp / setup } {colorscheme=phetype}

```

## 12 Keys

### 12.1 Ignored keys

The following are ignored (with or without warnings)

```

unicode (setup key)
pdfencoding (setup key) 1360 \keys_define:nn { hyp / setup }
pdfversion (setup key) 1361 {
1362   ,unicode .code:n = {}
1363   ,pdfencoding .code:n = {}
1364   ,pdfversion .code:n =

### 12.3 “MetaData keys”

The following keys are relevant for the metadata: the info dictionary and the xmp-metadata.

`pdflang` (*setup key*) `pdflang` should be deprecated.

```

2083 \keys_define:nn { hyp / setup }

```

```

2084 {
2085     ,pdflang .code:n =
2086     {
2087         \tl_if_empty:nTF { #1 }
2088         {
2089             \pdfmanagement_remove:nn {Catalog} { Lang }
2090         }
2091         {
2092             \pdfmanagement_add:nnx {Catalog} { Lang } { (#1) }
2093         }
2094         \__hyp_store_metadata:nn {pdflang}{#1}
2095     }
2096 }

```

### 12.3.1 “info keys”

pdfauthor (setup key) The keys store their value also in the metadata container, so that hyperxmp can use  
pdftitle (setup key) them.

```

2172         {
2173             \tl_if_blank:nTF {##1}
2174             {
2175                 \pdfmanagement_remove:nn {Info}{#2}
2176             }
2177             {
2178                 \pdfmanagement_add:nnx {Info}{#2}{(\tl_to_str:n {##1})}
2179             }
2180             \exp_args:Nx \__hyp_store_metadata:nn {pdf\str_lowercase:n{#1}}{##1}
2181         }
2182     }
2183 }

```

```

2184
2185 \__hyp_setup_info_date_key:nn {creationdate} {CreationDate}
2186 \__hyp_setup_info_date_key:nn {moddate} {ModDate}

```

**pdftrapped** (*setup key*) Trapped is a bit curious, it has an value `unknown`, and one can't suppress it ...

```

2187 \keys_define:nn { hyp / setup }
2188 {
2189   ,pdftrapped .code:n =
2190   {
2191     \exp_args:Nne
2192     \keys_set:nn { hyp / setup } { _pdftrapped = \str_uppercase:n { #1 } }
2193   }
2194   ,_pdftrapped .choices:nn = {TRUE,FALSE,UNKNOWN}
2195   {
2196     \pdfmanagement_add:nnx {Info}{Trapped}
2197     {/
2198       \str_uppercase:f { \str_head:n { #1 } }
2199       \str_lowercase:f { \str_tail:n { #1 } }
2200     }
2201     \__hyp_store_metadata:nx {pdftrapped}
2202     {
2203       \str_uppercase:f { \str_head:n { #1 } }
2204       \str_lowercase:f { \str_tail:n { #1 } }
2205     }
2206   }
2207   ,_pdftrapped / unknown .code:n =
2208   {
2209     \msg_warning:nnxxx { hyp } { unknown-choice }
2210     { pdftrapped }
2211     { true~(case-insensitive), false~(case-insensitive), unknown~(case-insensitive) }
2212     { \exp_not:n {#1} }
2213   }
2214 }

```

**pdfinfo** (*setup key*) pdfinfo allows to set the info keys with keyval ...

```

2215 \keys_define:nn { hyp / setup }
2216 {
2217   pdfinfo .code:n =
2218   {
2219     \keys_set:nn { hyp / info } { #1 }
2220   }
2221 }

```

Now we set some default values

```

2222 \keys_set:nn { hyp / setup} {pdfcreator = LaTeX-with-hyperref}
2223 \keys_set:nn { hyp / setup} {pdfauthor = }
2224 \keys_set:nn { hyp / setup} {pdftitle = }
2225 \keys_set:nn { hyp / setup} {pdfsubject = }

```

## 12.4 hyperxmp keys

hyperxmp defines lots of keys for `\hypersetup`. They now longer work with this driver. So we provide them, but they are only stored as metadata:

```

2226 \clist_map_inline:nn
2227 {
2228   ,pdfcopyright
2229   ,pdftype
2230   ,pdflicenseurl
2231   ,pdfauthortitle
2232   ,pdfcaptionwriter
2233   ,pdfmetalang
2234   ,pdfapart
2235   ,pdfaconformance
2236   ,pdfuapart
2237   ,pdfxstandard
2238   ,pdfsource
2239   ,pdfdocumentid
2240   ,pdfinstanceid
2241   ,pdfversionid
2242   ,pdfrendition
2243   ,pdfpublication
2244   ,pdfpubtype
2245   ,pdfbytes
2246   ,pdfnumpages
2247   ,pdfissn
2248   ,pdfeissn
2249   ,pdfisbn
2250   ,pdfbookedition
2251   ,pdfpublisher
2252   ,pdfvolumenum
2253   ,pdfissuenum
2254   ,pdfpagerange
2255   ,pdfdoi
2256   ,pdfurl
2257   ,pdfidentifier
2258   ,pdfsubtitle
2259   ,pdfpubstatus
2260   ,pdfcontactaddress
2261   ,pdfcontactcity
2262   ,pdfcontactregion
2263   ,pdfcontactpostcode
2264   ,pdfcontactcountry
2265   ,pdfcontactphone
2266   ,pdfcontactemail
2267   ,pdfcontacturl
2268   ,pdfdate
2269 }
2270 {
2271   \keys_define:nn { hyp / setup }
2272   {
2273     #1 .code:n= { \__hyp_store_metadata:nn {#1}{##1}}
2274   }
2275 }
2276
2277 \str_if_eq:eeT {A}{\pdfmeta_standard_item:n{type}}
2278 {
2279   \exp_args:Nnx

```

```

2280 \keys_set:nn {hyp / setup}
2281 {
2282   ,pdfapart      = \pdfmeta_standard_item:n {level}
2283   ,pdfaconformance = \pdfmeta_standard_item:n {conformance}
2284 }
2285 }

```

## 12.5 Transitions

`pdfpageduration` sets the duration a page is shown in full screen mode.

```

2286 \keys_define:nn { hyp / setup }
2287 {
2288   pdfpageduration .code:n =
2289   {
2290     \tl_if_blank:nTF { #1 }
2291     {
2292       \pdfmanagement_remove:nn {Page}{Dur}
2293     }
2294     {
2295       \pdfmanagement_add:nnn {Page}{Dur}{#1}
2296     }
2297   }
2298 }

```

Transition settings are used by (some) pdf viewers when presenting a pdf in full screen mode. They are added to the page settings and describe the transition from the previous page to current page. Transition setting can be set in the preamble for all pages or in the document for the current and the following pages. Due to the asynchronous page breaking one has to be careful to set it on the right page, e.g. only after a `\newpage`. The generic driver uses a different syntax than the other `hyperref` drivers: various transition options can be set by a keyval syntax in the value of `pdfpagetransition`. A typical setting looks e.g. like this

```

\hypersetup{pdfpagetransition={style=Fly,duration=2,direction=90,opaque=false}}

```

style	one of Split, Blinds, Box, Dissolve, Glitter, R, Fly, I, Uncover, Fade
duration	a number, describes the duration of the transition
direction	H (horizontal, only Split, B V (vertical, only Split, B 0 (left to right, only Wip 90 (bottom to top, only W 180 (right to left, only W 270 (top to bottom, only 315 (top left to bottom, None (only Fly)
motion	one of I, O, only relevant for and Fly
scale	a number, only relevant for
opaque	true or false, only relevant

The keys allowed in the argument of `pdfpagetransition` are

```

2299 \keys_define:nn { hyp / setup }
2300 {

```

```

2301 pdfpagetransition .code:n =
2302 {
2303     \tl_if_blank:nTF {#1}
2304     {
2305         \pdfmanagement_remove:nn {Page}{Trans}
2306     }
2307     {
