

debate: L^AT_EX Package for Debates Between Reviewers

Yegor Bugayenko

0.1.0 2021/09/24

This package helps you organize debates between a few people right inside your documents:

```
\documentclass{article}
\usepackage[T1]{fontenc}
\usepackage{debate}
\begin{document}
I think apples are tastier
\debate[Jeff]{I don't think it's true!}
\debate[Anna]{It is indeed true!}
than pears!
```

```
And I don't want to argue with me.
\end{document}
```

I think apples are tastier
than pears. ~~Anna~~ It is indeed true!
And I don't want to argue with me.

You can hide them all using `hide` package option.

More details about this package you can find in the [yegor256/debate](https://github.com/yegor256/debate) GitHub repository.
