

The `latex-lab-testphase` code*

Ulrike Fischer L^AT_EX Project

January 12, 2022

Abstract

1 Introduction

This code implements small files which can be loaded with the `testphase` key of `\DocumentMetadata`. Currently it only contains a wrapper for `tagpdf`, but this will be extended to allow user to load well defined parts of the tagged PDF project.

2 The Implementation

```
1 <*tagpdf | phase-I | phase-II>
2 \RequirePackage{tagpdf}
3 \AddToDocumentProperties [document]{testphase/tagpdf}{loaded}
4 </tagpdf | phase-I | phase-II>
5 <tagpdf | phase-II>\tagpdfsetup{activate,paratagging,interwordspace}
6 <phase-I>\tagpdfsetup{activate,interwordspace}
7 <*tagpdf | phase-I | phase-II>
8 \AddToDocumentProperties [document]{tagging}{active}
9 \AddToDocumentProperties [document]{tagging/para}{active}
10 \AddToDocumentProperties [document]{tagging/interwordspace}{active}
11 </tagpdf | phase-I | phase-II>
```

*

Index

The italic numbers denote the pages where the corresponding entry is described, numbers underlined point to the definition, all others indicate the places where it is used.

A		R	
<code>\AddToDocumentProperties</code> <i>3, 8, 9, 10</i>	<code>\RequirePackage</code> <i>2</i>
D		T	
<code>\DocumentMetadata</code> <i>1</i>	<code>\tagpdfsetup</code> <i>5, 6</i>
