

# glossaries-extra.sty v1.52: documented code

Nicola L.C. Talbot

Dickimaw Books

<http://www.dickimaw-books.com/>

2023-06-28

This is the documented code for the `glossaries-extra` package. See `glossaries-extra-manual.pdf` for the user manual.

## Contents

<b>1 Main Package Code (glossaries-extra.sty)</b>	<b>2</b>
1.1 Package Initialisation and Options . . . . .	2
1.2 Extra Utilities . . . . .	38
1.3 Modifications to Commands Provided by <code>glossaries</code> . . . . .	56
1.3.1 Existence Checks . . . . .	63
1.3.2 Document Definitions . . . . .	77
1.3.3 Existing Glossary Style Modifications . . . . .	83
1.3.4 Entry Formatting, Hyperlinks and Indexing . . . . .	88
1.3.5 Entry Counting . . . . .	155
1.3.6 Acronym Modifications . . . . .	172
1.3.7 Indexing and Displaying Glossaries . . . . .	176
1.4 Link Counting . . . . .	229
1.5 Integration with <code>glossaries-accsupp</code> . . . . .	231
1.6 Categories . . . . .	285
1.7 Abbreviations . . . . .	315
1.7.1 Abbreviation Styles Setup . . . . .	343
1.7.2 Predefined Styles . . . . .	348
1.8 Using Entries in Headings . . . . .	349
1.9 Prefixes . . . . .	371
1.10 Multi (Combined/Compound) Entries . . . . .	378
1.11 Multi-Lingual Support . . . . .	426
<b>2 Predefined Abbreviation Styles (glossaries-extra-abbrstyles.def)</b>	<b>427</b>
2.1 Predefined Styles (Default Font) . . . . .	446
2.2 Predefined Styles (Small Capitals) . . . . .	467
2.3 Predefined Styles (Fake Small Capitals) . . . . .	485

2.4	Predefined Styles (Emphasized) . . . . .	502
2.5	Predefined Styles (User Parentheses Hook) . . . . .	529
2.6	Predefined Styles (Hyphen) . . . . .	542
2.7	Predefined Styles (No Short on First Use) . . . . .	581
<b>3</b>	<b>Commands Specific to bib2gls (glossaries-extra-bib2gls.sty)</b>	<b>586</b>
<b>4</b>	<b>Style Adjustments (glossaries-extra-stylemods.sty)</b>	<b>647</b>
4.1	Package Initialisation . . . . .	647
4.2	List-Like Styles . . . . .	649
4.3	Longtable Styles . . . . .	653
4.4	Long Ragged Styles . . . . .	655
4.5	Supertabular Styles . . . . .	657
4.6	Super Ragged Styles . . . . .	659
4.7	Inline Style . . . . .	661
4.8	Tree Styles . . . . .	662
4.9	Multicolumn Styles . . . . .	686
<b>5</b>	<b>bookindex style (glossary-bookindex.sty)</b>	<b>695</b>
<b>6</b>	<b>longextra styles (glossary-longextra.sty)</b>	<b>703</b>
<b>7</b>	<b>topic styles (glossary-topic.sty)</b>	<b>754</b>
<b>8</b>	<b>table styles (glossary-table.sty)</b>	<b>760</b>
<b>9</b>	<b>Rollback Files</b>	<b>802</b>
9.1	Rollback v1.48 (glossaries-extra-2021-11-22.sty) . . . . .	802

# 1 Main Package Code (glossaries-extra.sty)

## 1.1 Package Initialisation and Options

```
\NeedsTeXFormat{LaTeX2e}
```

Rollback releases:

```
\DeclareRelease{v1.48}{2021-11-22}{glossaries-extra-2021-11-22.sty}
\DeclareCurrentRelease{v1.52}{2023-06-28}
```

Declare package:

```
\ProvidesPackage{glossaries-extra}[2023/06/28 v1.52 (NLCT)]
```

Requires `xkeyval` to define package options.

```
\RequirePackage{xkeyval}
```

Requires etoolbox package.  
`\RequirePackage{etoolbox}`

Has glossaries already been loaded?  
`\@ifpackageloaded{glossaries}`  
`{%`

Already loaded so pass any options to `\setupglossaries`. This means that the options that can only be set when `glossaries` is loaded can't be used.

```
\newcommand{\glsxtr@dooption}[1]{\setupglossaries{#1}}%
\let\@glsxtr@declareoption\@gls@declareoption
}%
{%
```

Not already loaded, so pass options to `glossaries`.

```
\newcommand{\glsxtr@dooption}[1]{%
\PassOptionsToPackage{#1}{glossaries}}%
{%
```

Set the defaults.

```
\PassOptionsToPackage{toc}{glossaries}
\PassOptionsToPackage{nopostdot}{glossaries}
\PassOptionsToPackage{noredefwarn}{glossaries}
\@ifpackageloaded{polyglossia}{%
}{%
\@ifpackageloaded{babel}{%
\PassOptionsToPackage{translate=babel}{glossaries}}%
}{%
\newcommand*{\@glsxtr@declareoption}[2]{%
\DeclareOptionX{#1}{#2}%
\DeclareOption{#1}{#2}%
}%
}
```

Declare package options.

`\glsxtrundefaction` Determines what to do if an entry hasn't been defined. The two arguments are the error or warning message and the help message if an error should be produced.

```
\newcommand*{\glsxtrundefaction}[2]{%
\@glsxtrundeftag\PackageError{glossaries-extra}{#1}{#2}}%
{}
```

`\glsxtr@warnnonexistsordo` If user wants `undefaction=warn`, then `glossaries` v4.19 is required.

```
\newcommand*{\glsxtr@warnnonexistsordo}[1]{}
```

`\glsxtrundeftag` Text to display when an entry doesn't exist.

```
\newcommand*{\glsxtrundeftag}{??}
\newcommand*{\@glsxtrundeftag}{}
```

This text is switched on at the start of the document to prevent unwanted text inserted into the preamble if any tests are made before the start of the document.

```

\@glsxtr@warn@undefaction This is how \glsxtrundefaction should behave if undefaction=warn is set.
    \newcommand*{\@glsxtr@warn@undefaction}[2]{%
        \@glsxtrundeftag\GlossariesExtraWarning{#1}%
    }

\@glsxtr@err@undefaction This is how \glsxtrundefaction should behave if undefaction=error is set.
    \newcommand*{\@glsxtr@err@undefaction}[2]{%
        \@glsxtrundeftag\PackageError{glossaries-extra}{#1}{#2}%
    }

\@glsxtr@warn@onexistsordo This is how \glsxtr@warnnonexistsordo should behave if undefaction=warn is
set.
    \newcommand*{\@glsxtr@warn@onexistsordo}[1]{%
        \GlossariesExtraWarning{\string#1\space hasn't been defined, so
        some errors won't be converted to warnings.
        (This most likely means your version of
        glossaries.sty is below version 4.19.)}%
    }

```

```

\let\glsxtrundefaction@\glsxtr@err@undefaction
\let\glsxtr@warnnonexistsordo@\gobble
\let@\glsxtr@redef@forglsentries\relax
\fi
}

To assist bib2gls, v1.08 introduces the record option, which will write information to the aux file whenever an entry needs to be indexed.

\@glsxtr@record Does nothing by default.
\newcommand*{\@glsxtr@record}[3]{}

\glsxtr@recordsee Does nothing by default.
\newcommand*{\glsxtr@recordsee}[2]{}

\@glsxtr@defaultnumberformat
\newcommand*{\@glsxtr@defaultnumberformat}{\glsnumberformat}%

\GlsXtrSetDefaultNumberFormat
\newcommand*{\GlsXtrSetDefaultNumberFormat}[1]{%
  \renewcommand*{\@glsxtr@defaultnumberformat}{#1}%
}%

```

The `record` option is somewhat problematic. On the first L<sup>A</sup>T<sub>E</sub>X run the entries aren't defined. This isn't as straight-forward as commands like `\cite` since attributes associated with the entry's category may switch off the indexing or the entry's glossary type might require a particular counter. This kind of information can't be determined until the entry has been defined. So there are two different commands here. One that's used if the entry hasn't been defined, which tries to use sensible defaults, and one which is used when the entry has been defined.

\@glsxtr@do@record@wrglossary The `record=only` option sets `\@do@wrglossary` to this command, which means it's done within `\glsadd` and `\@gls@link`, and so is only done if the entry exists.

```

\newcommand*{\@glsxtr@do@record@wrglossary}[1]{%
  \begingroup
    \ifKV@glslink@noindex
    \else
      \protected@edef{\gls@label}{\glsdetoklabel{#1}}%
      \let\glslabel{\gls@label}
      \glswriteentry{#1}%
    {%
      \ifdefempty{\@glsxtr@thevalue}%
      {%
        \ifx\@glsxtr@org@theHvalue\@glsxtr@theHvalue
        \else
          \let\theHglsentrycounter\@glsxtr@theHvalue
        \fi
      }%
    }%
  \endgroup
}%

```

```

    \glsxtr@saveentrycounter
    \let\@@do@@wrglossary\glsxtr@dorecord
}%
{%
    \let\the\glsentrycounter\glsxtr@thevalue
    \let\the\Hglsentrycounter\glsxtr@theHvalue
    \let\@@do@@wrglossary\glsxtr@dorecordnodefer
}%
\ifx\glsxtr@record@setting\glsxtr@record@setting@alsoindex
    \glsxtr@do@wrglossary{#1}%
\else
    \glsxtr@rwrglossmark

```

Increment associated counter.

```

    \glsxtr@inc@wrglossaryctr{#1}%
    \@@do@@wrglossary
        \fi
    }%
\fi
\endgroup
}
```

`\glsxtr@do@alsoindex@wrglossary` The `record=alsoindex` option needs to both record and index.

```

\newcommand*{\glsxtr@do@alsoindex@wrglossary}[1]{%
    \glsxtr@do@wrglossary{#1}%
    \glsxtr@do@record@wrglossary{#1}%
}
```

`\glsxtr@record` The `record=only` option sets `\glsxtr@record` to this. This performs the recording if the entry *doesn't exist* and is done at the start of `\gls@field@link` and commands like `\gls@` (before the existence test). This means that it disregards the `wrgloss` key.

The first argument is the option list (as passed in the first optional argument to commands like `\gls`). This allows the `noindex` setting to be picked up. The second argument is the entry's label. The third argument is the key family (`glslink` in most cases, `glossadd` for `\glsadd`).

```
\newcommand*{\glsxtr@record}[3]{%
```

Save the label in case it's needed. This needs to be outside the existence check to allow the post-link hook to reference it.

```

\protected@edef\gls@label{\glsdetoklabel{#2}}%
\let\glslabel\gls@label
\ifglsentryexists{#2}{}
\else
    \glsxtr@rwrglossmark
    \begingroup
        \let\glsnumberformat\glsxtr@defaultnumberformat
        \def\glsxtr@thevalue{}%
        \def\glsxtr@theHvalue{\glsxtr@thevalue}%
        \let\glsxtr@org@theHvalue\glsxtr@theHvalue

```

Entry hasn't been defined, so we'll have to assume it's \glscounter by default.

```
\let\@gls@counter\glscounter
```

Unless the `equations` option is on and this is inside a numbered maths environment.

```
\if@glsxstr@equations  
  \glsxstr@use@equation@counter  
\fi
```

Check for default options (which may switch off indexing).

\@gls@setdefault@glslink@opts

Implement any pre-key settings.

\csuse{@glsxtr@#3@prekeys}%

Assign keys.

\setkeys{#3}{#1} %

Implement any post-key settings. Is the auto-add on?

\glsxstr@do@autoadd{#3}%

Check post-key hook.

```
\csuse{@glsxstr@#3@postkeys}%
```

Increment associated counter.

\glsxstr@inc@wrglossaryctr{#2}%

Check if `noindex` option has been used.

```
\ifKV@glslink@noindex
\else
  \glswriteentry{#2}%
{%
```

Check if the value has been set.

```
\ifdefempty{\@glsxstr@thevalue}{%
```

Key `theValue` hasn't been set, but check if `theHvalue` has been set. (Not particularly likely, but allow for it.)

```
\ifx\@glsxstr@org@theHvalue\@glsxstr@theHvalue
\else
    \let\theHglsentrycounter\@glsxstr@theHvalue
\fi
```

Save the entry counter.

\glsxstr@saveentrycounter

Temporarily redefine `\@do@wrglossary` for use with `\glsxtr@\@do@wrglossary`.

```
\let\@@do@{\wrglossary\@glsxstr@dorecord  
}%  
{%
```

`thevalue` has been set, so there's no need to defer writing the location value. (If it's dependent on the page counter, the `counter` key should be set instead.)

```
\let\theglsentrycounter\@glsxtr@thevalue
\let\theHglsentrycounter\@glsxtr@theHvalue
\let\@@do@@wrglossary\@glsxtr@dorecordnodefer
}%
\ifx\@glsxtr@record@setting\@glsxtr@record@setting@alsoindex
  \glsxtr@@do@wrglossary{#2}%
\else
```

No need to escape special characters.

```
\@@do@@wrglossary
\fi
}%
\fi
\endgroup
}%
}
```

`\@glsxtr@glslink@prekeys`  
`\newcommand{\@glsxtr@glslink@prekeys}{\glslinkpresetkeys}`

`\@glsxtr@glslink@postkeys`  
`\newcommand{\@glsxtr@glslink@postkeys}{\glslinkpostsetkeys}`

`\@glsxtr@glossadd@prekeys`  
`\newcommand{\@glsxtr@glossadd@prekeys}{\glsaddpresetkeys}`

`\@glsxtr@glossadd@postkeys`  
`\newcommand{\@glsxtr@glossadd@postkeys}{\glsaddpostsetkeys}`

`\@glsxtr@dorecord` If `record=alsoindex` or `record=hybrid` is used, then `\@glslocref` may have been escaped, but this isn't appropriate here.

```
\newcommand*\@glsxtr@dorecord{%
  \@@glsxtr@dorecord\@gls@label\glsxtr@record\@glsxtr@do@nameref@record
}
```

`\@@glsxtr@dorecord`  
`\newcommand*\@@glsxtr@dorecord[3]{%`  
 `\global\let\@glsrecordlocref\theglsentrycounter`  
 `\let\@glsxtr@orgprefix\@glo@counterprefix`  
 `\ifx\theglsentrycounter\theHglsentrycounter`  
 `\def\@glo@counterprefix{}%`  
 `\else`

Protect against non-expandable commands occurring in the location.

```
\protected@edef\@glsxtr@theentrycounter{\theglsentrycounter}%
\protected@edef\@glsxtr@theHentrycounter{\theHglsentrycounter}%
\@onelvel@sanitize\@glsxtr@theentrycounter
```

```

\@onellevel@sanitize\@glsxtr@theHentrycounter
\@xp@gls@getcounterprefix
{\@glsxtr@theentrycounter}{\@glsxtr@theHentrycounter}%
\fi
```

Don't protect the `\@glsrecordlocref` from premature expansion. If the counter isn't page then it needs expanding. If the location includes `\thepage` then `\protected@write` will automatically deal with it.

```

\ifx\@glsxtr@record@setting\@glsxtr@record@setting@nameref
#3%
{#1}{\@glo@counterprefix}{\@gls@counter}{\@glsnumberformat}%
{\@glsrecordlocref}%
\else
\@bibgls@write@aux{}{\string#2%
{#1}{\@glo@counterprefix}{\@gls@counter}{\@glsnumberformat}%
{\@glsrecordlocref}}%
\fi
\@glsxtr@counterrecordhook
\let\@glo@counterprefix\@glsxtr@orgprefix
}
```

`\@glsxtr@dorecordnodefer` As above, but don't defer expansion of location. This uses `\theglsentrycounter` directly for the location rather than `\@glslocref` since there's no need to guard against premature expansion of the page counter.

```

\newcommand*\@glsxtr@dorecordnodefer{%
\ifx\theglsentrycounter\theHglsentrycounter
\ifx\@glsxtr@record@setting\@glsxtr@record@setting@nameref
\@glsxtr@do@nameref@record
{\@gls@label}{}{\@gls@counter}{\@glsnumberformat}%
{\theglsentrycounter}%
\else
\@bibgls@write@aux{}{\string\glsxtr@record
{\@gls@label}{}{\@gls@counter}{\@glsnumberformat}%
{\theglsentrycounter}}%
\fi
\else
\@xp@gls@getcounterprefix{\theglsentrycounter}{\theHglsentrycounter}%
\ifx\@glsxtr@record@setting\@glsxtr@record@setting@nameref
\@glsxtr@do@nameref@record
{\@gls@label}{\@glo@counterprefix}{\@gls@counter}%
{\@glsnumberformat}{\theglsentrycounter}%
\else
\@bibgls@write@aux{}{\string\glsxtr@record
{\@gls@label}{\@glo@counterprefix}{\@gls@counter}{\@glsnumberformat}%
{\theglsentrycounter}}%
\fi
\fi
\@glsxtr@counterrecordhook
}
```

\@glsxtr@ifnum@mmode Check if in a numbered maths environment. The `amsmath` package is automatically loaded by `datatool-base`, which is required by `glossaries`, so `\ifst@rred` and `\if@display` should both be defined.

```
\newcommand{\@glsxtr@ifnum@mmode}[2]{%
  \ifmmode
    \ifst@rred
      #2%
    \else
```

Non-`amsmath` environments and regular inline math mode isn't flagged as starred by `amsmath`, but we can't use `\mathchoice` in this case as it's not the current style that's relevant. Instead we can use `amsmath`'s `\if@display`. This may not work for environments that aren't provided by `amsmath`.

```
  \if@display #1\else #2\fi
  \fi
  \else
    #2%
  \fi
}
```

\@glsxtr@do@nameref@record With `record=nameref`, the current label information is included in the record, but this may not have been defined, so `\csuse` will prevent an undefined control sequence error and just leave the last two arguments blank if there's no information. In the event that a record is in `amsmath`'s `align` environment `\@currentHref` will be out. There may be other instances where `\@currentHref` is out, so this also saves `\theHglsentrycounter`, which is useful if it can't be obtained by prefixing `\theHglsentrycounter`.

```
\newcommand*{\@glsxtr@do@nameref@record}[5]{%
  \gls@ifnotmeasuring
  {%
    \bibgls@write@aux{}{\string\glsxtr@record@nameref
      {#1}{#2}{#3}{#4}{#5}%
      {\csuse{@currentlabelname}}{\csuse{@currentHref}}%
      {\theHglsentrycounter}}%
  }%
```

```
}
```

Record and index. This option doesn't load `glossaries-extra-bib2gls` as the sorting is performed by `xindy` or `makeindex`. Index in this sense refers to the indexing mechanism used with indexing applications such as `makeindex` and `xindy`, but this could be confused with recording locations so "alsoindex" is now deprecated in favour of "hybrid", which is more obvious.

```

Version 1.06 changes the `docdef` option to a choice rather than boolean setting. The available values are: `false`, `true` or `restricted`. The `restricted` option permits document definitions as long as they occur before the first glossary is displayed.

\@glsxtr@docdefval The `docdef` value is stored as an integer: 0 (`false`), 1 (`true`) and 2 (`restricted`).

```
\newcommand*{\@glsxtr@docdefval}{0}
```

Need to provide conditional commands that are backward compatible:

```

\if@glsxtrdocdef
\newcommand*{\if@glsxtrdocdef}{\ifnum\@glsxtr@docdefval>0 }

\@glsxtrdocdeftrue
\newcommand*{\@glsxtrdocdeftrue}{\def\@glsxtr@docdefval{1} }

\@glsxtrdocdeffalse
\newcommand*{\@glsxtrdocdeffalse}{\def\@glsxtr@docdefval{0} }

```

`docdef` By default don't allow entries to be defined in the document to encourage the user to define them in the preamble, but if the user is really determined to define them in the document allow them to request this.

```

\define@choicekey{glossaries-extra.sty}{docdef}
  [\@glsxtr@docdefsetting\@glsxtr@docdefval]%
  {false,true,restricted,atom}[true]%
{%
  \ifnum\@glsxtr@docdefval>1\relax
    \renewcommand*{\@glsdoifexistsorwarn}{\glsdoifexists}%
  \else
    \renewcommand*{\@glsdoifexistsorwarn}{\glsdoifexistsorwarn}%
  \fi
}

```

```

\if@glsxtrdocdefrestricted
    \newcommand*{\if@glsxtrdocdefrestricted}{\ifnum\@glsxtr@docdefval>1 }

\@glsdoifexistsorwarn Need an error to notify user if an undefined entry is being referenced in the
glossary for the docdef=restricted option. This is used by \glossentryname
(not by \glossentrydesc etc as one error per entry is sufficient).
    \newcommand*{\@glsdoifexistsorwarn}{\glsdoifexistsorwarn}

  \pageref{wrglossary.#3}%
}
```

`indexcounter` Define the `wrglossary` counter that's incremented every time an entry is indexed, except for cross-references. This is designed for use with `bib2gls v1.4+`. It can work with the other indexing methods but it will interfere with the number list collation. This option automatically implements `counter=wrglossary`.

Since `glossaries` automatically loads `amsmath`, there may be a problem if the indexing occurs in the `equation` environment, because only one `\label` is allowed in each instance of that environment. It's best to change the counter when in maths mode.

```
\@glsxtr@declareoption{indexcounter}{%
  \glsxtr@dooption{counter=wrglossary}%

}
```

\glsrwl@disableanchorcmds

```
\providecommand{\glsrwl@disableanchorcmds}{\let\glstexorpdfstring\secondoftwo}
```

\@gls@getcounterprefix This command is provided by the base `glossaries` package, but is redefined here. The standard indexing methods don't directly store the hypertarget but instead need to split it into the counter, prefix and location parts, which can be reconstructed in the location list. Unfortunately, not all targets are in this form, so the links fail. With `record=nameref`, the complete target name can be saved, so this modification adjusts the warning.

The expansion should now be performed in `\@xp@gls@getcounterprefix`. Any commands that were using `\@gls@getcounterprefix` directly need to be use `\@xp@gls@getcounterprefix` instead.

```
\renewcommand*\@gls@getcounterprefix[2]{%
  \def\@gls@thisloc{\#1}\def\@gls@thisHloc{\#2}%

    prefixing ^ Jlocation '#1'. You need to modify the
    definition of \string\theH\@gls@counter^ Jotherwise you
    will get the warning: "name{\@gls@counter.\#1}' has been^ J
    referenced but does not exist"
    \ifx\@glsxtr@record@setting\@glsxtr@record@setting@only
      . You may want to consider using record=nameref instead%
    \fi}%
  \fi
  \fi
\fi
}
```

Provide script dialect hook (does nothing unless redefined by `glossaries-extra-bib2gls`).

```
\@glsxtrdialecthook
\newcommand*\@glsxtrdialecthook{}}

Set up record option if required.

\glsxtr@setup@record
```

Disable preamble-only options and switch on the undefined tag at the start of the document.

```
\AtBeginDocument{%
  \disable@keys{glossaries-extra.sty}{abbreviations,docdef,record}%
  \def\glsxtrundefdebug{\@glsxtrundefdebug}%
  \def\@glsxtrundeftag{\glsxtrundeftag}%
}
```

## 1.2 Extra Utilities

```
\GlsXtrIfUnusedOrUndefined{\langle label \rangle}{\langle true \rangle}{\langle false \rangle}
```

Does *true* if the entry given by *label* is either undefined or hasn't been used (or has had the first use flag reset).

```
\newcommand*{\GlsXtrIfUnusedOrUndefined}[3]{%
  \ifglsentryexists[#1]%
  {\ifbool{glo@\glsdetoklabel[#1]@flag}{#3}{#2}}%
  {#2}%
}
```

Starred form of `\ifglossaryexists` was only introduced to `glossaries` v4.46 so provide it if it hasn't been defined.

```
\ifdef\s@ifglossaryexists
{%
}

\ifglossaryexists
  \renewcommand{\ifglossaryexists}{%
    \@ifstar\s@ifglossaryexists\@ifglossaryexists
  }

\@ifglossaryexists
  \newcommand{\@ifglossaryexists}[3]{%
    \ifcsundef{glotype@#1@out}{#3}{#2}%
  }

\s@ifglossaryexists
  \newcommand{\s@ifglossaryexists}[3]{%
    \ifcsundef{glolist@#1}{#3}{#2}%
  }
```

```
\glsxtrifemptyglossary{\langle type \rangle}{\langle true \rangle}{\langle false \rangle}
```

```
\glsxtrifemptyglossary
```

Provide command to determine if any entries have been added to the glossary (where the glossary label is provided in the first argument). The entries are stored in the comma-separated list `\glolist@<type>`. If this hasn't been defined, the glossary doesn't exist. If it has been defined and is simply a comma, the glossary exists and is empty. (It's initialised to a comma.)

```
\newcommand{\glsxtrifemptyglossary}[3]{%
  \ifcsdef{glolist@#1}%
  {%
    \ifcsstring{glolist@#1}{,}{#2}{#3}%
  }%
  {%
    \glsxtrundefaction{Glossary type '#1' doesn't exist}{}%
    #2%
  }%
}
```

`\GlsXtrIfInGlossary{<label>}{<type>}{<true>}{<false>}`

`\GlsXtrIfInGlossary`

Test if the given entry is in the given glossary list. This may not correspond to the `type` key as the entry may have been copied to the list. Does `<false>` and issues warning if the glossary doesn't exist.

```
\newcommand*{\GlsXtrIfInGlossary}[4]{%
  \ifcsdef{glolist@#2}%
  {%
    \protected@edef{\glsxtr@tmp}{\#1}%
    \letcs{\glsxtr@tmplist}{glolist@#2}%
    \expandafter\DTLifinlist\expandafter{\@glsxtr@tmp}{\@glsxtr@tmplist}%
    {#3}{#4}%
  }%
  {%
    \glsxtrundefaction{Glossary type '#1' doesn't exist}{}%
    #4%
  }%
}
```

`\glsxtrifkeydefined` Tests if the key given in the first argument has been defined.

```
\newcommand*{\glsxtrifkeydefined}[3]{%
  \key@ifundefined{glossentry}{#1}{#3}{#2}%
}
```

`\glsxtrprovidestoragekey` Like `\glsaddstoragekey` but does nothing if the key has already been defined.

```
\newcommand*{\glsxtrprovidestoragekey}{%
  \@ifstar{\sglsxtr@provide@storagekey}{\glsxtr@provide@storagekey}%
}
```

`\@glsxtr@provide@storagekey` Unstarred version.

```

    \gls@expand@field{##1}{#1}{##2}}%
}%
}%
{%
  \glsxtr@provide@addstoragekey{#1}%
}

```

The name of a text-block control sequence can be stored in a field (given by `\GlsXtrFmtField`). This command can then be used with `\glsxtrfmt` [`<options>`] [`<label>`] [`<text>`] which effectively does `\glslink[<options>]{<label>}{<cs>}{<text>}`. If the field hasn't been set for that entry just `<text>` is done.

```

\GlsXtrFmtField
\newcommand{\GlsXtrFmtField}{useri}

```

```
\GlsXtrFmtDefaultOptions
    \newcommand{\GlsXtrFmtDefaultOptions}{noindex}
```

\glsxtrfmt [*options*] {*entry-label*} {*text*} [*insert*]

\glsxtrfmt

The post-link hook isn't done. This now has a starred form that checks for a final optional argument.

```
\newrobustcmd*\glsxtrfmt{\@ifstar@s@glsxtrfmt@glsxtrfmt}
```

\@glsxtrfmt Unstarred form.

```
\newcommand*{\@glsxtrfmt}[3][]{\@@glsxtrfmt{\#1}{\#2}{\#3}{}}
```

\s@glsxtrfmt Starred form.

```
\newcommand*{\s@glsxtrfmt}[3][]{%
    \new@ifnextchar{\s@glsxtrfmt{\#1}{\#2}{\#3}}{%
        \@@glsxtrfmt{\#1}{\#2}{\#3}{}}{}%
}
```

\s@@glsxtrfmt Pick up final optional argument.

```
\def\s@@glsxtrfmt#1#2#3[#4]{\@@glsxtrfmt{\#1}{\#2}{\#3}{\#4}}
```

\@@glsxtrfmt Actual inner working.

```
\newcommand*{\@@glsxtrfmt}[4]{%
```

Since there's no post-link hook to worry about, grouping can be added to provide some protection against nesting (but in general nested link text should be avoided).

```
\begingroup
\def\glslabel{\#2}%
\glsdoifexistsodo{\#2}%
{%
    \ifglshasfield{\GlsXtrFmtField}{\#2}%
    {%
        \let\do@gls@link@checkfirsthyper\relax
        \expandafter\gls@link\expandafter[\GlsXtrFmtDefaultOptions,\#1]{\#2}%

```

\preglossarypreamble Typo in command name resulted in \preglossarypreamble being defined when it should have been called \pretoglossarypreamble. Old name retained for backward compatibility.

```
\newcommand{\preglossarypreamble}{\pretoglossarypreamble}
```

### 1.3 Modifications to Commands Provided by `glossaries`

Some of the commands provided by `glossaries` are modified to take into account new options or to change default behaviour.

\@p@glossarysection Phantom section only needs to be added for starred section commands.

```

\renewcommand*\@p@glossarysection}[2]{%
\glsclearpage
\ifdefempty{@glossarysecstar}{%
\csname @@glossarysec\endcsname{#2}%
}{%
\phantomsection
\gls@toc{#1}{\@glossarysec}%
\csname @@glossarysec\endcsname*{#2}%
}%
\@@glossaryseclabel
}

```

The original \gls@entry@field causes a problem for undefined entries when used in section headings or captions. Since entries must be defined with just the base package this isn't a significant issue, but it will cause a problem with bib2gls where no entries are defined on the first L<sup>A</sup>T<sub>E</sub>X call, so redefine \gls@entry@field to use \csuse instead of \csname.

```
\@gls@entry@field{<label>}{<field>}
```

\gls@entry@field

This command was introduced to `glossaries` version 4.03 but older versions are likely to be incompatible with `glossaries-extra`.

```

\ifdef\@gls@entry@field{%

```

```

    \renewcommand*{\@gls@entry@field}[2]{\csuse{glo@\glsdetoklabel{#1}@#2}}
}
{}
```

\ifglsused{\langle label \rangle}{\langle true part \rangle}{\langle false part \rangle}

\ifglsused

In the event that undefined entries should trigger a warning rather than an error, \ifglsused needs to be modified to check for existence. If the boolean variable is undefined, then its state is indeterminate and is neither true nor false, so neither \langle true part \rangle nor \langle false \rangle part will be performed if \langle label \rangle is undefined. See also \GlsXtrIfUnusedOrUndefined.

```

\renewcommand*{\ifglsused}[3]{%
  \glsdoifexists{#1}{\ifbool{glo@\glsdetoklabel{#1}@flag}{#2}{#3}}%
```

\@gls@noexpand@field Add check for encapinnerfmt, encapnocase and encapnocaseinnerfmt

### 1.3.1 Existence Checks

\glsdoifexists Modify \glsdoifexists to take account of the undefaction setting.

```

\renewcommand{\glsdoifexists}[2]{%
  \ifglsentryexists{#1}{#2}{\glsxtr@doifexists{#1}}%
}

```

\glsxtr@doifexists Provide a robust command for the error/warning in case \glsdoifexists is expanded.

```
\newrobustcmd{\glsxtr@doifexists}[1]{%
```

Define \glslabel in case it's needed after this command (for example in the post-link hook).

```

\protected@edef\glslabel{\glsdetoklabel{#1}}%
\expandafter\glsxtrundefdebug\expandafter
  {\expandafter\detokenize\expandafter{\glslabel}}%
\glsxtrundefaction{Glossary entry '\glslabel'
  has not been defined}{You need to define a glossary entry before
  you can reference it.}%
}

```

\glsdoifnoexists Modify \glsdoifnoexists to take account of the undefaction setting.

```

\renewcommand{\glsdoifnoexists}[2]{%
  \ifglsentryexists{#1}{\glsxtr@doifnoexists{#1}}{#2}%
}

```

\glsxtr@doifnoexists Provide a robust command for the error/warning in case \glsdoifnoexists is expanded.

```

\newrobustcmd{\glsxtr@doifnoexists}[1]{%
  \glsxtrundefaction{Glossary entry '\glsdetoklabel{#1}'
    has already been defined}%
}

```

\glsdoifexistsordo Modify \glsdoifexistsordo to take account of the undefaction setting. This command was introduced in glossaries version 4.19, so check if it has been defined first.

```
\ifdef\glsdoifexistsordo
{%
  \renewcommand{\glsdoifexistsordo}[3]{%
    \ifglsentryexists{#1}{#2}%
    {%
      \glsxtrundefaction{Glossary entry '\glsdetoklabel{#1}'%
        has not been defined}{You need to define a glossary entry%
        before you can use it.}%
      #3%
    }%
  }%
}
{%
  \glsxtr@warnnonexistsordo\glsdoifexistsordo
  \newcommand{\glsdoifexistsordo}[3]{%
    \ifglsentryexists{#1}{#2}%
    {%
      \glsxtrundefaction{Glossary entry '\glsdetoklabel{#1}'%
        has not been defined}{You need to define a glossary entry%
        before you can use it.}%
      #3%
    }%
  }%
}
}
```

\doifglossarynoexistsordo Similarly for \doifglossarynoexistsordo.

```
\ifdef\doifglossarynoexistsordo
{%
  \renewcommand{\doifglossarynoexistsordo}[3]{%
    \ifglossaryexists*{#1}%
    {%
      \glsxtrundefaction{Glossary type '#1' already exists}{}%
      #3%
    }%
  }%
  {#2}%
}
{%
  \glsxtr@warnnonexistsordo\doifglossarynoexistsordo
  \newcommand{\doifglossarynoexistsordo}[3]{%
    \ifglossaryexists*{#1}%
    {%
      \glsxtrundefaction{Glossary type '#1' already exists}{}%
      #3%
    }%
  }%
  {#2}%
}
```

```
 }%
}
```

There are now three types of cross-references: the `see` key (as original), the `alias` key (from `glossaries-extra` v1.12) and the `seealso` key (from `glossaries-extra` v1.16). The original `see` key needs to have a corresponding field (which it doesn't with the base `glossaries` package).

`\@newglossaryentryposthook` Hook into end of `\newglossaryentry` to add "see" value as a field.

```
\appto\@newglossaryentryposthook{%
  \ifdefvoid{\glo@see}{%
    {\cscdef{\glo@label}{\glo@see}}{%
      \cscdef{\glo@label}{\glo@see}{\glo@see}{%

    \def\@glsxtr@usesee[#1]{#2}\end@glsxtr@usesee{%
        \glsxtruseseeformat{#1}{#2}%
    }
```

`\glsxtruseseformat` The format used by `\glsxtrusese`. The first argument is the tag (such as `\seename`). The second argument is the comma-separated list of cross-referenced labels.

```
\newcommand*{\glsxtruseeformat}[2]{%
  \glsseeformat[#1]{#2}{}}%
```

`\glsseeitemformat` glossaries originally defined `\glsseeitemformat` to use `\glsentryname` but in v3.0 this was switched to use `\glsentrytext` due to problems occurring with the `name` field being sanitized. Since this is no longer a problem, `glossaries-extra` restored the original definition as it makes more sense to use the `name` in the cross-reference list. Unfortunately this doesn't take style changes into account, so as from v1.42, this now uses `\glsfmttext` and `\glsfmtname` instead. (The `text` field is chosen rather than the `short` field to allow for the "noshort" styles.)

```
\renewcommand*{\glsseeitemformat}[1]{%
  \ifglsasshort[#1]{\glsfmttext[#1]}{\glsfmtname[#1]}}%
```

`\glsxtrhiername{\langle label \rangle}`

`\glsxtrhiername`

Displays the hierarchical name for the given entry. The cross-reference format `\glsseeitemformat` may be redefined to use this command to show the hierarchy, if required. This now uses `\glsfmttext` and `\glsfmtname` instead of `\glsasshort` and `\glsaccessname` to allow for style formatting.

```
\newcommand*{\glsxtrhiername}[1]{%

### 1.3.3 Existing Glossary Style Modifications

Modify `\setglossarystyle` to keep track of the current style. This allows the `\glossaries-extra-stylemods` package to reset the current style after the required modifications have been made.

```

{@glsxtr@current@style} Initialise the current style to the default style.
\newcommand*{@glsxtr@current@style}{@glossary@default@style}

@glsxtrpreglossarystyle A hook to initialise default definitions for style commands.
\newcommand{\glsxtrpreglossarystyle}{%
    \renewcommand*{\glssubgroupheading}[4]{\glsgroupheading{##4}}%
}

Modify \setglossarystyle to set {@glsxtr@current@style} and reset \glssubgroupheading
in case the style doesn't support it.

\setglossarystyle
\renewcommand*{\setglossarystyle}[1]{%
    \ifcsundef{@glsstyle@#1}{%
        \PackageError{glossaries-extra}{Glossary style '#1' undefined}{}
    }%
    \glsxtrpreglossarystyle
    \csname @glsstyle@#1\endcsname
}

Only set the current style if it exists.
\protected@edef@glsxtr@current@style{#1}%
}

Set this as the default, if a default hasn't been set.
\ifx@glossary@default@style\relax
\protected@edef@glossary@default@style{#1}%
\fi
}

In case we have an old version of glossaries:
\ifdef@glossary@default@style
{%
\let@glossary@default@style\relax
}

\glslistdottedwidth If \glslistdottedwidth has been defined and is currently equal to .5\hsize
then make the modification suggested in bug report #92
\ifdef@glslistdottedwidth
{%
\ifdim@glslistdottedwidth=.5\hsize
\setlength{\glslistdottedwidth}{-\dimexpr\maxdimen-1sp\relax}
\AtBeginDocument{%
\ifdim@glslistdottedwidth=-\dimexpr\maxdimen-1sp\relax
\setlength{\glslistdottedwidth}{.5\columnwidth}%
\fi
}%
\fi
}

```

```
}
```

```
{}%
```

Similarly for \glsdescwidth:

```
\glsdescwidth
  \ifdef\glsdescwidth
  {%
    \ifdim\glsdescwidth=.6\hsize
      \setlength{\glsdescwidth}{-\dimexpr\maxdimen-1sp\relax}
      \AtBeginDocument{%
        \ifdim\glsdescwidth=-\dimexpr\maxdimen-1sp\relax
          \setlength{\glsdescwidth}{.6\columnwidth}%
        \fi
      }%
    \fi
  }
{}%
```

and for \glspagelistwidth:

```
\glspagelistwidth
  \ifdef\glspagelistwidth
  {%
    \ifdim\glspagelistwidth=.1\hsize
      \setlength{\glspagelistwidth}{-\dimexpr\maxdimen-1sp\relax}
      \AtBeginDocument{%
        \ifdim\glspagelistwidth=-\dimexpr\maxdimen-1sp\relax
          \setlength{\glspagelistwidth}{.1\columnwidth}%
        \fi
      }%
    \fi
  }
{}%
```

\glossaryentrynumbers Has the nonumberlist option been used?

```
\def\org@glossaryentrynumbers#1{#1\gls@save@numberlist{#1}}%
\ifx\org@glossaryentrynumbers\glossaryentrynumbers
  \glsnonumberlistfalse
  \renewcommand*\glossaryentrynumbers}[1]{%
    \ifglsentryexists{\glscurrententrylabel}%
    {%
      \glsxtrpreloctag
      \GlsXtrFormatLocationList{#1}%

    {%
      \gls@save@numberlist{#1}%
    }{%
    }%
  }%
}
\fi

```

\GlsXtrFormatLocationList Provide an easy interface to change the format of the location list without removing the save number list stuff.

```
\newcommand*{\GlsXtrFormatLocationList}[1]{#1}
```

Sometimes users want to prefix the location list with “page”/“pages”. The simplest way to determine if the location list consists of a single location is to check for instances of \delimN or \delimR, but this isn’t so easy to do as they might be embedded inside the argument of formatting commands. With a bit of trickery we can find out by adjusting \delimN and \delimR to set a flag and then save information to the auxiliary file for the next run.

\GlsXtrEnablePreLocationTag

```

\newcommand*{\GlsXtrEnablePreLocationTag}[2]{%
  \let\@glsxtrpreloctag\@@glsxtrpreloctag
  \let\@glsxtrpostloctag\@@glsxtrpostloctag
  \renewcommand*{\@glsxtr@pagetag}{#1}%

@glsxtrpreloctag
\GlsXtrFormatLocationList{##1}%
@glsxtrpostloctag
\gls@save@numberlist{##1}%
}
\fi
}%
}

```

### 1.3.4 Entry Formatting, Hyperlinks and Indexing

`\glsentryfmt` Change default entry format. Use the generic format for regular terms (that is, entries that have a category with the `regular` attribute set) or non-regular terms without a short value and use the abbreviation format for non-regular terms that have a short value. If further attributes need to be checked, then `\glsentryfmt` will need redefining as appropriate (or use `\def\glsentryfmt`). The abbreviation format is set here for entries that have a short form, even if they are regular entries to ensure the abbreviation fonts are correct.

```

\renewcommand*\glsentryfmt{%
\ifglshasshort{\glslabel}{\glssetabbrvfmt{\glscategory{\glslabel}}}{%
\glsifregular{\glslabel}{%
\glsxtrregularfont{\glsgenentryfmt}}}{%
}%
\ifglshasshort{\glslabel}{%
\glsxtrabbreviationfont{\glsxtrgenabbrvfmt}}{%
\glsxtrregularfont{\glsgenentryfmt}}}{%
}%
}

```

`\glsxtrregularfont` Font used for regular entries.

```
\newcommand*\glsxtrregularfont[1]{#1}
```

`\glsxtrabbreviationfont` Font used for abbreviation entries.

```
\newcommand*\glsxtrabbreviationfont[1]{#1}
```

Some formatting commands (such as highlighting or letter spacing) may require expandable content in the argument, so also provide a formatting command for use within `\glsgenentryfmt` for those instances.

`\glsxtrdefaultentrytextfmt` This is the default command that `\glsxtrgenentrytextfmt` is initialised to within `\@gls@link`.

```
\newcommand*\glsxtrdefaultentrytextfmt[1]{#1}
```

`\glsxtrattrentrytextfmt` Provide a convenient command that applies the formatting according to the category attribute. This isn't used by default as this inner formatting should rarely be needed and increases complexity.

```
\newcommand{\glsxtrattrentrytextfmt}[1]{%
  \glshasattribute{\glslabel}{innertextformat}%
  {%
    \csuse{\glsgetattribute{\glslabel}{innertextformat}}{#1}%
  }%
  {#1}%
}
```

`\glsxtrgenentrytextfmt` This command is a user-level command to allow it to be included in custom formats or styles but it should not be redefined at the user level as it's redefined within `\@gls@link` (similar to other style commands, such as `\glscapscase`. Redefine `\glsxtrdefaultentrytextfmt` to change the default definition for this command.

```
\newcommand*{\glsxtrgenentrytextfmt}{\glsxtrdefaultentrytextfmt}
```

```
\glsfmtfield{\langle insert \rangle}{\langle cs \rangle}{\langle label \rangle}{\langle field \rangle}
```

`\glsfmtfield`

Provide a convenient way of applying a formatting command to the actual field contents. No check for existence.

Note this command intentionally isn't robust, as it's possible that a user may want to redefine an abbreviation command to use `\MakeLowercase`, for example, to use smallcaps when abbreviations have been defined with the short version in capitals. Using `\newrobustcmd` will break that case.

```
\newcommand*{\glsfmtfield}[4]{%
  \expandafter\expandafter\expandafter
  #2\expandafter\expandafter\expandafter
  {\csname glo@\glsdetoklabel{#3}@#4\endcsname #1}%
}
```

```
\Glsfmtfield{\langle insert \rangle}{\langle cs \rangle}{\langle label \rangle}{\langle field \rangle}
```

`\Glsfmtfield`

As above but convert first letter to uppercase. Note that if the formatting command can go outside of `\makefirstuc` then it can simply be applied around the appropriate command that expands to the field value. For example,

```
%\emph{\Glsentrytext{label}}%
%
```

instead of

```
%\Glsfmtfield{}{\emph{sample}}{text}%
%
```

Note this command intentionally isn't robust for the same reason as above. The expansion allows `\makefirstuc` to pick up any mappings or blockers before the content is passed to `\MFUsentencecase`.

```

\newcommand*{\Glsfmtfield}[4]{%
  \ifx#2@firstofone
    \expandafter\expandafter\expandafter
    \glssentencecase\expandafter\expandafter\expandafter\expandafter
    {%
      \csname glo@\glsdetoklabel{#3}@#4\endcsname #1%
    }%
  \else
    \expandafter\expandafter\expandafter
    \glssentencecase\expandafter\expandafter\expandafter\expandafter
    {%
      \expandafter\expandafter\expandafter
      #2\expandafter\expandafter\expandafter
      {\csname glo@\glsdetoklabel{#3}@#4\endcsname #1}%
    }%
  \fi
}
\glsmfuaddmap{\glsfmtfield}{\Glsfmtfield}

```

`\GLSfmtfield{\<insert>}{\<cs>}{\<label>}{\<field>}`

`\GLSfmtfield`

As above but convert all to uppercase. The expansion is in case we have an older kernel.

```

\newcommand*{\GLSfmtfield}[4]{%
  \ifx#2@firstofone
    \expandafter\expandafter\expandafter
    \glsuppercase\expandafter\expandafter\expandafter\expandafter
    {%
      \csname glo@\glsdetoklabel{#3}@#4\endcsname #1%
    }%
  \else
    \expandafter\expandafter\expandafter
    \glsuppercase\expandafter\expandafter\expandafter\expandafter
    {%
      \expandafter\expandafter\expandafter
      #2\expandafter\expandafter\expandafter
      {\csname glo@\glsdetoklabel{#3}@#4\endcsname #1}%
    }%
  \fi
}
\glsmfublocker{\GLSfmtfield}

```

`\glsfmtinsert` Formats `\glsinsert`.

```

\newcommand*{\glsfmtinsert}{%
  \ifdefempty{\glsinsert}{%
    \expandafter\glsxtrgenentrytextfmt\expandafter{\glsinsert}%
  }%
}

```

\GLSfmtinsert As above but all caps.

```
\newcommand*{\GLSfmtinsert}{%
  \ifdefempty\glsinsert{}%
  {}%
  \expandafter\glstrupercase\expandafter
  {\expandafter\glsxtrgenentrytextfmt\expandafter{\glsinsert}}%
}%
}
```

\glsifapplyinnerfmtfield{*label*}{*field*}{*true*}{*false*}

Does *true* if \glsgenentryfmt should encapsulate the given field with the inner format otherwise does *false*.

```
\newcommand*{\glsifapplyinnerfmtfield}[4]{%
  \ifcsundef{@glo@\glsdetoklabel{#1}@innerfmt@fields}%
  {#3}%
  {\xifinlistcs{#2}{@glo@\glsdetoklabel{#1}@innerfmt@fields}{#4}{#3}}%
}
```

\glsexcapplyinnerfmtfield Adds the field to the exclusion list. This typically means that the field value already contains the inner formatting.

```
\newcommand*{\glsexcapplyinnerfmtfield}[2]{%
  \listcseadd{@glo@\glsdetoklabel{#1}@innerfmt@fields}{#2}%
}
```

Commands like `\glsifplural` are only used by the `\gls`-like commands in the `glossaries` package, but it might be useful for the post-link hook to know if the user has used, say, `\glsfirst` or `\glsplural`. This can provide better consistency with the formatting of the `\gls`-like commands, even though they don't use `\glsentryfmt`.

```

\glsxtrifwasglslike For use in the post-link hook, this indicates whether or not the hook follows a
\gls-like command.

\glsxtrsaveinsert{\entry-label}{\insert}

\glsxtrsaveinsert
The insert argument isn't saved in \glsinsert for the \glslike commands, but provide a way to save it if it is required for the post-link hook. The default is to set \glsinsert to empty. This means that the insert won't appear in the post-link hook with commands like \glsxtrfull for the hyphen abbreviation styles. The entry label is provided in case the insert should only be saved for certain entries, such as those with a particular category.

\newcommand*{\glsxtrsaveinsert}[2]{\def\glsinsert{}}

\glsxtrfullsaveinsert As above but specifically for commands like \glsxtrfull

Commands like \acrshort already set \glsifplural, but they don't set \glsxtrifwasfirstuse so they need adjusting. These commands shouldn't be used with \newabbreviation, but the redefinitions below allow for users reverting \newacronym back to its base definition.

\@glsxtr@base@acrcmd@warn Warn user that they need to use new abbreviation commands.

```

\newcommand*{\@glsxtr@base@acrcmd@warn}[2]{%
  \GlossariesExtraWarning{Base acronym command \string#1\space
    should not be used with new abbreviation definitions. Use
    \string#2\space instead}%
}

```

\@glsxtr@base@acrcmd Warn user that they need to use new abbreviation commands.

```

The full formats use the internal long and short commands (such as `\@acrshort` and `\@acrlong`). Therefore they don't need adjustments, but they do need clearer warnings. This means three warnings per use (once for the full command and once each for the short and long commands), but at least this way the most important warning (replace `\acrfull` with `\glsxtrfull` etc) is present.

```

Modify \glsaddkey so additional keys provided by the user can be treated
in a similar way.

\@glsaddkey
\renewcommand*\@glsaddkey}[7]{%
\key@ifundefined{glossentry}{#1}%
{%
\define@key{glossentry}{#1}{\csdef{@glo@#1}{##1}}%
\appto\@gls@keymap{,#1}{#1}%
}

```

```

\appto\@newglossaryentryprehook{\csdef{@glo@#1}{#2}}%
\appto\@newglossaryentryposthook{%
  \letcs{\@glo@tmp}{@glo@#1}%
  \gls@assign@field{#2}{\@glo@label}{#1}{\@glo@tmp}%
}%
\newcommand*{#3}[1]{\@gls@entry@field{##1}{#1}}%
\newcommand*{#4}[1]{\@Glsentryfield{##1}{#1}}%

```

Now for the commands with links. These currently don't support the inner text format. First the version with no case change:

```

\ifcsdef{@gls@user@#1@}{%
{%
  \PackageError{glossaries}{%
    {Can't define '\string#5' as helper command
     '\expandafter\string\csname @gls@user@#1@\endcsname' already
      exists}%
  }%
}%
\expandafter\newcommand\expandafter*\expandafter
  {\csname @gls@user@#1\endcsname}[2][]{%
  \new@ifnextchar[%
    {\csuse{@gls@user@#1@}{##1}{##2}}%
    {\csuse{@gls@user@#1@}{##1}{##2}[]}}%
\csdef{@gls@user@#1@}##1##2[##3]{%
  \def\glsxtrcurrentfield{#1}%
  \glsxtrassignfieldfont{##2}%
  \glsxtrsaveinsert{##2}{##3}%
  \@gls@field@link{##1}{##2}{\@gls@field@font{#3{##2}##3}}%
}%
\newrobustcmd*{#5}{%
  \expandafter\@gls@hyp@opt\csname @gls@user@#1\endcsname}%
}%

```

Next the version with the first letter converted to upper case (modified):

```

\ifcsdef{@Gls@user@#1@}{%
{%
  \PackageError{glossaries}{%
    {Can't define '\string#6' as helper command
     '\expandafter\string\csname @Gls@user@#1@\endcsname' already
      exists}%
  }%
}%
\expandafter\newcommand\expandafter*\expandafter
  {\csname @Gls@user@#1\endcsname}[2][]{%
  \new@ifnextchar[%
    {\csuse{@Gls@user@#1@}{##1}{##2}}%
    {\csuse{@Gls@user@#1@}{##1}{##2}[]}}%
\csdef{@Gls@user@#1@}##1##2[##3]{%
  \def\glsxtrcurrentfield{#1}%

```

```

\glsxtrassignfieldfont{##2}%
\glsxtrsaveinsert{##2}{##3}%
@gls@field@link[\let\glscapscase\@secondofthree]%
{##1}{##2}{\gls@field@font{#4{##2}##3}}%
}%
\newrobustcmd*{#6}{%
\expandafter\gls@hyp@opt\csname @Gls@user@#1\endcsname}%
}%

```

Finally the all caps version (modified):

```

\ifcsdef{@GLS@user@#1@}%
{%
\PackageError{glossaries}%
{Can't define '\string#7' as helper command
'\expandafter\string\csname @GLS@user@#1@\\endcsname' already
exists}%
{}}%
}%
\expandafter\newcommand\expandafter*\expandafter
{\csname @GLS@user@#1\\endcsname}[2][]{%
\new@ifnextchar[%
{\csuse{@GLS@user@#1@}{##1}{##2}}%
{\csuse{@GLS@user@#1@}{##1}{##2}[]}%
\csdef{@GLS@user@#1@}##1##2##3{%
\def\glsxtrcurrentfield{#1}%
\glsxtrassignfieldfont{##2}%
\glsxtrsaveinsert{##2}{##3}%
@gls@field@link[\let\glscapscase\@thirdofthree]%
{##1}{##2}{\gls@field@font{\glsuppercase{#3{##2}##3}}}}%
}%
\newrobustcmd*{#7}{%
\expandafter\gls@hyp@opt\csname @GLS@user@#1\endcsname}%
}%

```

Add mappings.

```

\glsmfuaddmap{#3}{#4}%
\glsmfuaddmap{#5}{#6}%
\glsmfublocker{#7}%
}%
{%
\PackageError{glossaries-extra}{Key '#1' already exists}{}%
}%
}
```

@gls@link@nocheckfirsthyper Old versions of glossaries don't define this, so provide it just in case it hasn't been defined.

```
\providecommand*{\gls@link@nocheckfirsthyper}{}%
```

nk@postkeys@checkfirsthyper Need another check after preunset and postunset options have been applied.

```
\newcommand*{\gls@link@postkeys@checkfirsthyper}{}%
```

\@gls@link@checkfirsthyper Modify check to determine if the hyperlink should be automatically suppressed, but save the original in case the acronyms are restored.

```
\let\@glsxtr@org@checkfirsthyper\@gls@link@checkfirsthyper
\renewcommand*\@gls@link@checkfirsthyper{}%
```

\ifglsused isn't useful in the post link hook as it's already been unset by then, so define a command that can be used in the post link hook. Since \@gls@link@checkfirsthyper is only used by commands like \gls but not by other commands, this seems the best place to put it to automatically set the value for the commands that change the first use flag. The other commands should set \glsxtrifwasfirstuse to \@secondoftwo (which is done in \@glsxtr@field@linkdefs). Note that if the entry is undefined (as with bib2gls on the first L<sup>A</sup>T<sub>E</sub>X run), \ifglsused does neither true nor false parts. However, in that case, this macro won't be called anyway (since it's used in the argument of \glsdoifexistsordo).

```
\ifglsused{\glslabel}%
{\let\glsxtrifwasfirstuse\@secondoftwo}
{\let\glsxtrifwasfirstuse\@firstoftwo}%
```

Similarly for \glsxtrifwasglslike

```
\let\glsxtrifwasglslike\@firstoftwo
```

Store the category label for convenience.

```
\protected@edef\glscategorylabel{\glscategory{\glslabel}}%
\glsxtrifwasfirstuse
{%
\glsifcategoryattribute{\glscategorylabel}{nohyperfirst}{true}%
{\KV@glslink@hyperfalse}{}%
}%
{%
\glsifcategoryattribute{\glscategorylabel}{nohypernext}{true}%
{\KV@glslink@hyperfalse}{}%
}%
\glslinkcheckfirsthyperhook
}
```

\do@glsdisablehyperinlist This command was introduced in glossaries v4.19. If it hasn't been defined, we're using an earlier version, in which case the nohyper attribute can't be implemented.

```
\ifdef\do@glsdisablehyperinlist
{%
\let\@glsxtr@do@glsdisablehyperinlist\do@glsdisablehyperinlist
\renewcommand*\do@glsdisablehyperinlist{}%
\@glsxtr@do@glsdisablehyperinlist
\glsifattribute{\glslabel}{nohyper}{true}{\KV@glslink@hyperfalse}{}%
}%
{%
}
```

Define a `noindex` key to prevent writing information to the external file.

```
\define@boolkey{glslink}{noindex}[true]{}
\KV@glslink@noindexfalse
```

`\@gls@save@glslocal` Defined in `glossaries` v4.50 so may not be defined.

```
\providecommand*{\@gls@save@glslocal}{%
    \let\if@org@KV@glslink@local\ifKV@glslink@local
}
```

`\@gls@restore@glslocal` Defined in `glossaries` v4.50 so may not be defined.

```
\providecommand*{\@gls@restore@glslocal}{%
    \ifKV@glslink@local
        \let\@gls@do@glsunset\glslocalunset
    \else
        \let\@gls@do@glsunset\glsunset
    \fi
    \let\ifKV@glslink@local\if@org@KV@glslink@local
}
```

`\ls@default@restore@glslocal` Save default definition of `\@gls@restore@glslocal`

```
\let\@gls@default@restore@glslocal\@gls@restore@glslocal
```

`\gls@ignore@restore@glslocal`

```
\newcommand*{\@gls@ignore@restore@glslocal}{%
    \let\@gls@do@glsunset\gobble
    \let\ifKV@glslink@local\if@org@KV@glslink@local
}
```

`\@gls@do@glsunset` Defined in `glossaries` v4.50 so may not be defined.

```
\providecommand*{\@gls@do@glsunset}[1]{\glsunset{#1}}
```

`\@gls@default@glslink@opts` The `noindex` setting needs to be initialised, so it's now always set to false first before applying the default options. Otherwise, if `noindex` is explicitly set in a command like `\gls` then it won't get reset if the default option list doesn't set it.

```
\newcommand*{\@gls@default@glslink@opts}{}  
If \gls@setdefault@glslink@opts has been defined (glossaries v4.20) use it to set the default keys in \glslink.
```

`\gls@setdefault@glslink@opts`

```
\ifdef\gls@setdefault@glslink@opts
{
    \renewcommand*{\@gls@setdefault@glslink@opts}{%
        \KV@glslink@noindexfalse
        \expandafter\setupglslink\expandafter{\@gls@default@glslink@opts}%
        \glsxtrsetaliasnoindex
    }
}
```

Not defined so prepend it to `\do@glsdisablehyperinlist` to achieve the same effect.

```
\newcommand*{\@gls@setdefault@glslink@opts}{%
  \KV@glslink@noindexfalse
  \expandafter\setupglslink\expandafter{\@gls@default@glslink@opts}%
  \@glsxtrsetaliasnoindex
}
\preto\do@glsdisablehyperinlist{\@gls@setdefault@glslink@opts}
}
```

`\glsxtrsetaliasnoindex` Allow user to hook into the alias noindex setting. Default behaviour switches off indexing for aliases. If the record option is on, this will have been defined to do nothing. (`bib2gls` will deal with records for aliased entries.)

```
\providecommand*{\glsxtrsetaliasnoindex}{%
  \KV@glslink@noindextrue
}
```

`\@glsxtrsetaliasnoindex` The change made in v1.46 to remove the grouping has had the knock-on effect of redefining `\glscurrentfieldvalue`, which may be a problem, so v1.47 has changed this to use `\ifcvoid`.

```
\newcommand*{\@glsxtrsetaliasnoindex}{%
  \ifcvoid{glo@\glsdetoklabel{\glslabel}}@alias}%
{}%
{}%
\let\glsxtrindexaliased\@glsxtrindexaliased
\glsxtrsetaliasnoindex
\let\glsxtrindexaliased\@no@glsxtrindexaliased
}%
}

\@glsxtrindexaliased
\newcommand{\@glsxtrindexaliased}{%
\ifKV@glslink@noindex
\else
\begin{group}
\let\glsnumberformat\glsxtr@defaultnumberformat
\protected@edef\gls@counter{\csname glo@\glsdetoklabel{\glslabel}@counter\endcsname}%
\glsxtr@saveentrycounter

\glsnavhyperlink Since \glsnavhyperlink uses \glslink, it's necessary to patch it uses \glsdohyperlink instead of \glsxtrdohyperlink. The simplest way to achieve this is to locally let \glsxtrdohyperlink to \glsdohyperlink.

This command is provided by glossary-hypernav so it may not exist.

```
\ifdef\glsnavhyperlink
{
    \renewcommand*\{\glsnavhyperlink}[3][\@glo@type]{%
        \protected@edef\gls@grplabel{\#2}\protected@edef\@gls@grptitle{\#3}%
}
```

Scope:

```
{%
    \let\glsxtrdohyperlink\glsxtr@org@dohyperlink
    \@glslink{\glsnavhyperlinkname{\#1}{\#2}}{\#3}%
}%
}%
}
{}
```

Patch if glossaries pre 4.50.

```
\ifdef\@@gls@navhypertarget
{}
{%
\glsnavhypertarget
    \renewcommand*\{\glsnavhypertarget}{\protect\@@gls@navhypertarget}

\@@gls@navhypertarget
    \newcommand*\{\@@gls@navhypertarget}[3][\@glo@type]{%
        \@glsnavhypertarget{\#1}{\#2}{\#3}%
    }
}%
}
```

\@glsnavhypertarget Similarly for \@glsnavhypertarget

```
\ifdef\@glsnavhypertarget
{%
    \renewcommand*\{\@glsnavhypertarget}[3]{%
        \protected@write\@auxout{}{\string\@gls@hypergroup{\#1}{\#2}}%

}
```

```

    \GlossariesWarningNoLine{Navigation panel
      has changed. Rerun LaTeX}}}%
}%
}%
}%
\GlossariesWarningNoLine{Navigation panel
  for glossary type '#1'~~Jmissing group '#2'}}%
\gdef\gls@hypergroup{%
  \GlossariesWarningNoLine{Navigation panel
    has changed. Rerun LaTeX}}%
}%
}%
}%
}
```

The redefinition of `\glsdohyperlink` has been causing problems so introduce a new command instead.

`\glsxtrdohyperlink` Unpleasant complications can occur if the text or first key etc contains `\gls`, particularly if there are hyperlinks. To get around this problem, patch `\glsdohyperlink` so that it temporarily makes `\gls` behave like `\glstext [⟨hyper=false,noindex⟩]`. (This will be overridden if the user explicitly cancels either of those options in the optional argument of `\gls` or using the plus version.) This also patches the short form commands like `\acrshort` and `\glsxtrshort` to use `\glsentryshort` and, similarly, the long form commands like `\acrlong` and `\glsxtrlong` to use `\glsentrylong`. Added attribute check.

```

\newcommand*{\glsxtrdohyperlink}[2]{%
  \glshasattribute{\glslabel}{targeturl}%
}%
\glshasattribute{\glslabel}{targetname}%
}%
\glshasattribute{\glslabel}{targetcategory}%
}%
\hyperref{\glsgetattribute{\glslabel}{targeturl}}%
  {\glsgetattribute{\glslabel}{targetcategory}}%
  {\glsgetattribute{\glslabel}{targetname}}%
  {{\glsxtrprotectlinks#2}}%
}%
}%
\hyperref{\glsgetattribute{\glslabel}{targeturl}}%
  {}%
  {\glsgetattribute{\glslabel}{targetname}}%
  {{\glsxtrprotectlinks#2}}%
}%
}%
\href{\glsgetattribute{\glslabel}{targeturl}}%
  {{\glsxtrprotectlinks#2}}%
```

```

}%
}%
{%

```

Check for alias.

```

\glsfieldfetch{\glslabel}{alias}{\gloaliaslabel}%
\ifdefvoid\gloaliaslabel
{%
    \glsxtrhyperlink{\#1}{{\glsxtrprotectlinks{\#2}}}%
}%
{%

```

Is the alias a multi-entry?

}%
{%

```

Redirect link to the alias target.

```

\glsxtrhyperlink
{\glolinkprefix\glsdetoklabel{\gloaliaslabel}}%
{{\glsxtrprotectlinks{\#2}}}%
}%
}%
}
```

`\glsxtrhyperlink` Allows integration with the base `glossaries` package's `debug=showtargets` option.

```

\newcommand{\glsxtrhyperlink}[2]{%
    \glsdoshowtarget{\#1}{\hyperlink{\#1}{\#2}}}%
}%

```

`\glsdisablehyper` Redefine to set `\glslabel` (to allow it to be picked up by `\glsdohyperlink`).  
Also made it robust and added grouping to localise the definition of `\glslabel`.  
The original internal command `@glo@label` could probably be simply replaced with `\glslabel`, but it's retained in case its removal causes unexpected problems.

```

\renewrobustcmd*{\glshyperlink}[2][\glsentrytext{@glo@label}]{%
    \glsdoifexists{\#2}%
{%
    \def{@glo@label}{\#2}%
    {\protected@edef\glslabel{\#2}%
        \glslink{\glolinkprefix\glslabel}{\#1}}%
}%
}
```

`\glsdisablehyper` Redefine in case we have an old version of `glossaries`. This now uses `\def` rather than `\let` to allow for redefinitions of `\glsdohyperlink`.

```
\renewcommand{\glsdisablehyper}{%
  \KV@glslink@hyperfalse
  \def\@glslink{\glsdonohyperlink}%
  \let\@glstarget\@secondoftwo
}
```

**\glsenablehyper** This now uses `\def` rather than `\let` to allow for redefinitions of `\glsdohypertarget` and `\glsdohyperlink`.

```
\renewcommand{\glsenablehyper}{%
  \KV@glslink@hypertrue
  \def\@glslink{\glsxtrdohyperlink}%
  \def\@glstarget{\glsdohypertarget}%
}
```

**\glsdonohyperlink** This command was only introduced in glossaries v4.20, so it may not be defined (therefore use `\def`). For older glossaries versions, this won't be used if `hyperref` hasn't been loaded, which means the indexing will still take place. The generated text is scoped (the link text in `\hyperlink` is also scoped, so it's consistent).

```
\def\glsdonohyperlink#1#2{\glsxtrprotectlinks #2}
```

**\@glslink** Reset `\glslink` with patched versions:

```
\ifcsundef{hyperlink}%
{%
  \def\@glslink{\glsdonohyperlink}%
}%
{%
  \def\@glslink{\glsxtrdohyperlink}%
}
```

**\glsxtrprotectlinks** Make `\gls` (and variants) behave like the corresponding `\glstext` (and variants) with hyperlinking and indexing off.

```

### 1.3.5 Entry Counting

The (use) entry counting mechanism from glossaries is adjusted here to work with category attributes. Provide a convenient command to enable entry counting, set the `entrycount` attribute for given categories and redefine `\gls` etc to use `\cgls` instead. This form of entry counting is provided to adjust the formatting if the number of times an entry has been used (through commands that unset the first use flag) doesn't exceed the specified threshold. For link counting, see §1.4.

First adjust definitions of the unset and reset commands to provide a hook, but changing the flag can cause problems in certain situations, so to allow the normal unsetting to be temporarily disabled, `\@glsunset` is let to `\@glsxtr@unset`, which performs the actual unsetting through `\@@glsunset` and then does the hook. This means that the unsetting (and the hook) can be switched off by redefining `\@glsunset` and then switched back on again by changing the definition back to `\@glsxtr@unset`.

```

\@glsxtr@unset Global unset.
    \newcommand*{\@glsxtr@unset}[1]{%
        \@glsunset{\#1}%
        \glsxtrpostunset{\#1}%
    }%

\@glsunset Global unset.
    \let\@glsunset\@glsxtr@unset

\glsxtrpostunset
    \newcommand*{\glsxtrpostunset}[1]{}

Provide a command to store a list of labels that will need unsetting.

\GlsXtrStartUnsetBuffering
    \newcommand*{\GlsXtrStartUnsetBuffering}{%
        \@ifstar\s@GlsXtrStartUnsetBuffering\@GlsXtrStartUnsetBuffering
    }

```

\@GlsXtrStartUnsetBuffering Unstarred version doesn't check for duplicates.

```
\newcommand*{\@GlsXtrStartUnsetBuffering}{%
  \let\@glsxtr@org@unset@buffer\@glsxtr@unset@buffer
  \GlsXtrClearUnsetBuffer
  \let\@glsunset\@glsxtrbuffer@unset
  \let\org@glsxtrbuffer@check@repeats\glsxtrbuffer@check@repeats
  \renewcommand*{\@glsxtrbuffer@check@repeats}{%

  }%
}
}

```

### 1.3.6 Acronym Modifications

It's more consistent to use the abbreviation code for acronyms, but make some adjustments to allow for continued use of the `glossaries` package's custom acronym format. (For example, user may already have defined some acronym styles with `\newacronymstyle` which they would like to continue to use.) The original `glossaries` acronym code can be restored with `\RestoreAcronyms`, but adjust `\SetGenericNewAcronym` so that `\newacronym` adds the category.

```

\SetGenericNewAcronym
  \renewcommand*\SetGenericNewAcronym{%
  Make sure \RestoreAcronyms has been used.
  \ifdefequal\@addtoacronymlists\@glsxstr@org\@addtoacronymlists
  {}{%
    \GlossariesWarning{\string\SetGenericNewAcronym\space used

\else
\glsxtrgenentrytextfmt{ }%
\fi
}

```

### 1.3.7 Indexing and Displaying Glossaries

From time-to-time users ask if they can have one glossary sorted normally and another sorted by definition or usage. With the base `glossaries` package this can only be achieved with the “`noidx`” commands (Option 1). This is an attempt to mix and match.

First we need a list of the glossaries that require `makeindex/xindy`.

```

@glsxtr@reg@glosslist
\newcommand*{@glsxtr@reg@glosslist}{}}

Save the original definition of \makeglossaries:
\let@glsxtr@org@makeglossaries\makeglossaries

```

`glossaries@warn@noprintglossary` This command was only introduced to `glossaries` v4.47 so it may not be defined.

```

\providecommand{@makeglossaries@warn@noprintglossary}{%
\ifdefstring{@glo@types}{,}{%
\GlossariesWarningNoLine{No glossaries have been defined}%
}%
\GlossariesWarningNoLine{No \string\printglossary\space
}
```

```

        or \string\printglossaries\space
        found. ^^J(Remove \string\makeglossaries\space if you
        don't want any glossaries.) ^^JThis document will not
        have a glossary}%
}
}

```

\@domakeglossaries glossaries v4.45 introduced \@domakeglossaries to provide a way of disabling \makeglossaries. If it hasn't been defined, define here to do its argument:

```
\providecommand{\@domakeglossaries}[1]{#1}
```

\@gls@automake@types Added to glossaries v4.50 so may not be defined.

```
\providecommand{\@gls@automake@types}{\@glo@types}
```

Redefine \makeglossaries to take an optional argument. This should be empty for the usual behaviour (all glossaries need processing with an indexing application) or a comma-separated list of glossary labels indicating those glossaries that should be processed with an indexing application. The optional argument version shouldn't be used with record.

```

\makeglossaries
\renewcommand*\makeglossaries[1][]{%

Check automake setting:

```
\ifglsautomake
  \renewcommand*\{@gls@doautomake}{%
    \@for\@gls@type:=\@glsxtr@reg@glosslist\do{%
      \ifdefempty{\@gls@type}{}{\@gls@automake{\@gls@type}}%
    }%
  }%
\fi
```

Check the sort setting (glossaries v4.30 onwards):

```
\ifdef\@glo@check@sortallowed{\@glo@check@sortallowed\makeglossaries}{}%
\fi
}%
```

Prohibit the use of `\glsxtrnoidxgroups`.

```
\prohibit@glsxtrnoidxgroups
```

Activate warnings for incompatible options.

```
\let\gls@warn@makegloss@incompatible\gls@warn@makegloss@incompatible
}%
}%
}
```

```
warn@makegloss@incompatible
\newcommand*\{@gls@warn@makegloss@incompatible}[2]{}

warn@makegloss@incompatible
\newcommand*\{@gls@warn@makegloss@incompatible}[2]{%
  #2\GlossariesExtraWarning{#1\space is incompatible with \string\makeglossaries}%
}
```

The optional argument version of `\makeglossaries` needs an adjustment to `\@printglossary` to allow `\@glo@assign@sortkey` to pick up the glossary type.

Earlier versions of `glossaries-extra` simply saved the original version of `\@printglossary` with `\let \@glsxtr@orgprintglossary`. This was later changed to actually defining `\@glsxtr@orgprintglossary` to something similar with some alterations to allow for ignored glossaries, which don't have an associated title and to by-pass the existence check with `\ifglossaryexists` which doesn't recognise ignored glossaries. (`bib2gls` writes `\provideignoredglossary` to the `glstex` file for some settings, so the glossary might not been defined on

the first L<sup>A</sup>T<sub>E</sub>X run and it needs to be allowed with \printunsrtglossary on subsequent runs.)

Unfortunately, removing the existence check will cause an error if \printglossary is used with an ignored glossary.

As from glossaries v4.46, some new commands have been included to allow the existence check to be varied depending on whether or not ignored glossaries should be allowed, so check for them:

```
sxtr@printgloss@checkexists
\ifdef{@printgloss@checkexists}
{\newcommand{\glsxtr@printgloss@checkexists}{\@printgloss@checkexists}}
{\newcommand{\glsxtr@printgloss@checkexists}[2]{#2}}
```

\@glsxtr@orgprintglossary (This command is also used for on-the-fly setting.)

```
\newcommand{\@glsxtr@orgprintglossary}[2]{%
\def@glo@type{\glsdefaulttype}}
```

Add check here.

```

\glsxtrglossentry Users may prefer to have entries displayed throughout the document rather than gathered together in a list. This command emulates the way \glossentry behaves (without the style formatting commands like \item). This needs to define \currentglossary to the current glossary type (normally set at the start of \@printglossary) and needs to define \glscurrententrylabel to the entry's label (normally set before \glossentry and \subglossentry). This needs some protection in case it's used in a section heading.

```

`\glsxtrunsrtdo` Provide a user-level call to `\@glsxtr@noidx@do` to make it easier to define a new handler.

```
\newcommand{\glsxtrunsrtdo}{\@glsxtr@noidx@do}
```

`\glsxtrgroupfield` `bib2gls` provides a supplementary field labelled `secondarygroup` for secondary glossaries, so provide a way of switching to that field. (The group key still needs checking. There's no associated key with the internal field).

```
\newcommand*{\glsxtrgroupfield}{group}
```

The tabular-like glossary styles cause quite a problem with the iterative approach. In particular for the group skip. To compensate for this, the groups are now determined while `\@glsxtr@doglossary` is being constructed rather than in the handler.

`\@glsxtr@checkgroup` The argument is the entry's label. (This block of code was formerly in `\@glsxtr@noidx@do`.) Now that this is no longer within a tabular environment, the global definitions aren't needed. The result is now stored in

`\@glsxtr@groupheading`, which will be empty if no heading is required. The current hierarchical level must have first been saved to `\glscurrententrylevel`.

```

## 1.4 Link Counting

This is different to the entry counting provided by the base package (which counts the number of times the first use flag is unset). Instead, this method hooks into `\@gls@link` (through `\glsxtr@inc@linkcount`) to increment an associated counter. To preserve resources, the counter is only defined if it needs to be incremented. This method is independent of the presence of hyperlinks. (The “link” part of the name refers to `\@gls@link` not `\hyperlink`.)

`\@glsxtr@do@inc@linkcount` This performs the actual incrementing and counter definition. The counter is given by `\c@glsxtr@linkcount@\langle label\rangle` where `\langle label\rangle` is the entry’s label. Since this is performed within `\@gls@link` the label can be accessed with `\glslabel`.

```
\newcommand{\glsxtr@do@inc@linkcount}{%
```

Does this entry have the `linkcount` attribute set?

```
\glsifattribute{\glslabel}{linkcount}{true}%
{%
```

Does the counter exist?

```
\ifcsdef{c@glsxtr@linkcount@\glslabel}{}%
{%
```

Counter doesn’t exist, so define it.

```
\newcounter{glsxtr@linkcount@\glslabel}%
```

If `linkcountmaster` is set, add to counter reset.

```
\glshasattribute{\glslabel}{linkcountmaster}%
{%
```

Need to ensure values are fully expanded.

```
\begingroup
\edef\@glo@tmp{\endgroup\noexpand\@addtoreset{glsxtr@linkcount@\glslabel}%
{\glsgetattribute{\glslabel}{linkcountmaster}}}%
\@glo@tmp
}%
{%
}
```

Increment counter:

```
\glsxtrinlinkcounter{glsxtr@linkcount@\glslabel}%
}%
{%
}
```

`\glsxtrinlinkcounter` May be redefined to use `\refstepcounter` if required.

```
\newcommand*{\glsxtrinlinkcounter}[1]{\stepcounter{#1}}
```

`\GlsXtrLinkCounterValue` Expands to the associated link counter register or 0 if not defined.

```
\newcommand*{\GlsXtrLinkCounterValue}[1]{%
\ifcsundef{c@glsxtr@linkcount@#1}{0}{\csname c@glsxtr@linkcount@#1\endcsname}%
}
```

`\GlsXtrTheLinkCounter` Expands to the display value of the associated link counter or 0 if not defined.

```
\newcommand*{\GlsXtrTheLinkCounter}[1]{%
\ifcsundef{the\glsxtr@linkcount@#1}{0}{%
\csname the\glsxtr@linkcount@#1\endcsname}%
}
```

`\GlsXtrIfLinkCounterDef` Tests if the counter has been defined

```
\newcommand*{\GlsXtrIfLinkCounterDef}[3]{%
\ifcsundef{the\glsxtr@linkcount@#1}{#3}{#2}%
}
```

`\GlsXtrLinkCounterName` Expands to the associated link counter name. (No check for existence.)

```
\newcommand*{\GlsXtrLinkCounterName}[1]{glsxtr@linkcount@#1}
```

`\GlsXtrEnableLinkCounting[<master counter>]{<categories>}`

Enable link counting for the given categories.

```
\newcommand*{\GlsXtrEnableLinkCounting}[2][]{%
\let\glsxtr@inc@linkcount\glsxtr@do@inc@linkcount
\@for\glsxtr@label:=#2\do
{%
\glssetcategoryattribute{@glsxtr@label}{linkcount}{true}%
\ifstrempty{#1}{%
\glssetcategoryattribute{@glsxtr@label}{linkcountmaster}{#1}%
}%
}%
}
\onlypreamble\GlsXtrEnableLinkCounting
```

## 1.5 Integration with glossaries-accsupp

Provide better integration with the `glossaries-accsupp` package. (Must be loaded before the main code of `glossaries-extra` either explicitly or through the `accsupp` package option.)

These commands have their definitions set according to whether or not `glossaries-extra` has been loaded.

To allow for formatting commands that need to go inside all other commands (such as the commands provided by `soul`), also add version of each command that takes a text-block command as an argument.

```
\@ifpackageloaded{glossaries-accsupp}{}
```

Define (or redefine) commands to use the accessibility information.

`\glsaccessname` Display the `name` value (no link and no check for existence).

```
\newcommand*{\glsaccessname}[1]{%
  \glsnameaccessdisplay
  {%
    \glsentryname{\#1}%
  }%
  {\#1}%
}
```

`\glsaccessfmtname{\langle insert \rangle}{\langle cs \rangle}{\langle label \rangle}`

`\glsaccessfmtname`

```
\newcommand*{\glsaccessfmtname}[3]{%
  \glsnameaccessdisplay
  {%
    \glsfmtfield{\#1}{\#2}{\#3}{name}%
  }%
  {\#3}%
}
```

`\Glsaccessname` Display the `name` value (no link and no check for existence) with the first letter converted to upper case.

```
\newcommand*{\Glsaccessname}[1]{%
  \glsnameaccessdisplay
  {%
    \Glsentryname{\#1}%
  }%
  {\#1}%
}
```

`\Glsaccessfmtname{\langle insert \rangle}{\langle cs \rangle}{\langle label \rangle}`

`\Glsaccessfmtname`

    }%
}

```

As from `glossaries` v4.45, the replacement text support has been corrected so that the accessibility support for abbreviations use the “E” (expanded value) element. This should actually contain the long form since it’s supposed to explain the abbreviation. This is a bit redundant on first use for styles like `long-short`.

```
\glsdefaultshortaccess{\langle long \rangle}{\langle short \rangle}
```

```
\glsdefaultshortaccess
```

This command was only introduced to `glossaries-accsupp` 4.45 so it may not be defined. This was defined to do #1 (#2) but the original definition is more appropriate, so has been reverted back to the definition provided by `glossaries-accsupp`.

```
\providecommand*{\glsdefaultshortaccess}[2]{#1}
```

```
\glsxtrassignactualsetup
```

`@setup@default@short@access` Renamed `\@gls@setup@default@access` and removed argument since it can be obtained from `\glsxtrorgshort`.

`\@gls@setup@default@access` Assign the default value of the `shortaccess` key. The argument is the short value passed to `\newabbreviation`. The `shortaccess` value should explain the abbreviation.

```

## 1.6 Categories

\glscategory Add a new storage key that can be used to indicate a category. The default category is general.

```
\glsaddstoragekey{category}{general}{\glscategory}
```

\glsifcategory Convenient shortcut to determine if an entry has the given category.

```
\newcommand{\glsifcategory}[4]{%
  \ifglsfieldeq{\#1}{category}{\#2}{\#3}{\#4}%
}
```

Categories can have attributes.

```
\glssetcategoryattribute{\category}{\attribute-label}{\value}
```

\glssetcategoryattribute

Set (or override if already set) an attribute for the given category.

```
\newcommand*{\glssetcategoryattribute}[3]{%
  \csdef{@glsxtr@categoryattr@@\#1@#2}{\#3}%
}
```

```
\glssetcategoriesattribute{\category-list}{\attribute-label}{\value}
```

\glssetcategoriesattribute

Similar to above, but globally apply to each category in the list.

```
\newcommand*{\glssetcategoriesattribute}[3]{%
  \@for\@gls@thiscatlabel:=#1\do{%
    \csgdef{\glsxtrcategoryattr}{\@gls@thiscatlabel}{#2}{#3}%
  }%
}
```

`\glssetcategoriesattributes{<category list>} {<attribute-label list>} {<value>}`

`\glssetcategoriesattributes`

Similar to above, but apply to each category and attribute in the list.

```
\newcommand*{\glssetcategoriesattributes}[3]{%
```

Group to avoid problems with nested `\@for`.

```
{%
  \@for\@gls@thisattrlabel:=#2\do{%
    \glssetcategoriesattribute{#1}{\@gls@thisattrlabel}{#3}%
  }%
}%
}
```

`\glssetcategoryattributes{<category>} {<attribute list>} {<value>}`

`\glssetcategoryattributes`

Similar to above, but globally apply to each attribute in the list to the given category.

```
\newcommand*{\glssetcategoryattributes}[3]{%
  \@for\@gls@thisattrlabel:=#2\do{%
    \csgdef{\glsxtrcategoryattr}{\@gls@thisattrlabel}{#3}%
  }%
}
```

`\glsgetcategoryattribute{<category>} {<attribute-label>}`

`\glsgetcategoryattribute`

Get the value of the given attribute for the given category. Does nothing if the attribute isn't defined.

```
\newcommand*{\glsgetcategoryattribute}[2]{%
  \csuse{\glsxtrcategoryattr}{#1}{#2}%
}
```

`\glsunsetcategoryattribute{<category>} {<attribute-label>}`

Unsets the given attribute for the given category.

```
\newcommand*{\glsunsetcategoryattribute}[2]{%
```

```
\csundef{@glsxtr@categoryattr@@#1@#2}%
}
```

```
\glshascategoryattribute{\category}{\attribute-label}
{\true}{\false}
```

\glshascategoryattribute

Tests if the category has the given attribute set.

```
\newcommand*{\glshascategoryattribute}[4]{%
\ifcsvvoid{@glsxtr@categoryattr@@#1@#2}{#4}{#3}%
}
```

```
\glssetattribute{\entry label}{\attribute-label}{\value}
```

\glssetattribute

Short cut where the category label is obtained from the entry information.

```
\newcommand*{\glssetattribute}[3]{%
\glssetcategoryattribute{\glscategory{#1}}{#2}{#3}%
}
```

```
\glsgetattribute{\entry label}{\attribute-label}
```

\glsgetattribute

Short cut where the category label is obtained from the entry information.

```
\newcommand*{\glsgetattribute}[2]{%
\glsgetcategoryattribute{\glscategory{#1}}{#2}%
}
```

```
\glshasadtribute{\entry
label}{\attribute-label}{\true}{\false}
```

\glshasadtribute

Short cut to test if the given attribute has been set where the category label is obtained from the entry information.

```
\newcommand*{\glshasadtribute}[4]{%
\ifglsentryexists{#1}%
{\glshascategoryattribute{\glscategory{#1}}{#2}{#3}{#4}}%
{#4}%
}
```

```
\glsifcategoryattribute{\category}{\attribute-label}
{\value}{\true
part}{\false part}
```

\glsifcategoryattribute

True if category has the attribute with the given value.

```
\newcommand{\glsifcategoryattribute}[5]{%
\ifcsundef{@glsxtr@categoryattr@@#1@#2}%
{#5}%
{\ifcsstring{@glsxtr@categoryattr@@#1@#2}{#3}{#4}{#5}}%
}
```

```
\glsifattribute{\langle entry label \rangle}{\langle attribute-label \rangle}{\langle value \rangle}
{\langle true part \rangle}{\langle false part \rangle}
```

\glsifattribute

Short cut to determine if the given entry has a category with the given attribute set.

```
\newcommand{\glsifattribute}[5]{%
\ifglsentryexists{#1}%
{\glsifcategoryattribute{\glscategory{#1}}{\#2}{#3}{#4}{#5}}%
{#5}%
}
```

Provide expandable test to determine if attribute is set to true.

\@glsxtr@truevalue

```
\newcommand*{\@glsxtr@truevalue}{true}
```

```
\glsifcategoryattributetrue{\langle category-label \rangle}{\langle attribute \rangle}
{\langle true \rangle}{\langle false \rangle}
```

\glsifcategoryattributetrue Does \langle false \rangle if the entry hasn't been defined.

```
\newcommand*{\glsifcategoryattributetrue}[4]{%
\ifcsequal{@glsxtr@categoryattr@@#1@#2}%
{@glsxtr@truevalue}%
{#3}{#4}}%
```

```
\glsifattributetrue{\langle label \rangle}{\langle attribute \rangle}{\langle true \rangle}{\langle false \rangle}
```

\glsifattributetrue

Does \langle false \rangle if the entry hasn't been defined.

```
\newcommand*{\glsifattributetrue}[4]{%
\ifcsundef{glo@\glsdetoklabel{#1}@category}%
{#4}%
{\ifcsequal
{@glsxtr@categoryattr@@\csname glo@\glsdetoklabel{#1}@category\endcsname @#2}%
{@glsxtr@truevalue}%
{#3}{#4}}%
```

```
\glsifcategoryattributehasitem{\category}
{⟨attribute-label⟩}{⟨item⟩}{⟨true part⟩}{⟨false part⟩}
```

`sifcategoryattributehasitem`

True if category has the attribute (whose value is a comma-separated list) contains the given item. The *⟨item⟩* is expanded.

```
\newrobustcmd{\glsifcategoryattributehasitem}[5]{%
\ifcsundef{@glsxtr@categoryattr@@#1#2}%
{#5}%
{%
\protected@edef\gls@tmp{%
\noexpand\DTLifinlist{#3}{\csuse{@glsxtr@categoryattr@@#1@#2}}}}%
\gls@tmp{#4}{#5}%
}%
}
```

Set attributes for the default **general** category:

```
\glssetcategoryattribute{general}{regular}{true}
```

Acronyms are regular by default, since they're typically just treated like normal words.

```
\glssetcategoryattribute{acronym}{regular}{true}
```

`\glssetregularcategory` Convenient shortcut to add the regular attribute.

```
\newcommand*{\glssetregularcategory}[1]{%
\glssetcategoryattribute{#1}{regular}{true}%
}
```

```
\glsifregularcategory{\category}{⟨true part⟩}{⟨false part⟩}
```

`\glsifregularcategory`

Short cut to determine if a category has the regular attribute explicitly set to true.

```
\newcommand{\glsifregularcategory}[3]{%
\glsifcategoryattribute{#1}{regular}{true}{#2}{#3}%
}
```

```
\glsifnotregularcategory{\category}{⟨true part⟩}{⟨false part⟩}
```

`\glsifnotregularcategory`

Short cut to determine if a category has the regular attribute explicitly set to false.

```
\newcommand{\glsifnotregularcategory}[3]{%
\glsifcategoryattribute{#1}{regular}{false}{#2}{#3}%
}
```

`\glsifregular`

```
\glsifregular{\<entry label>}{\<true part>}{\<false part>}
```

Short cut to determine if an entry has a regular attribute set to true.

```
\newcommand{\glsifregular}[3]{%
  \glsifregularcategory{\glscategory{#1}}{#2}{#3}%
}
```

`\glsifnotregular`

```
\glsifnotregular{\<entry label>}{\<true part>}{\<false part>}
```

Short cut to determine if an entry has a regular attribute set to false.

```
\newcommand{\glsifnotregular}[3]{%
  \glsifnotregularcategory{\glscategory{#1}}{#2}{#3}%
}
```

`\glsforeachincategory`

```
\glsforeachincategory[<glossary
labels>]{<category-label>}{\<glossary-cs>}{\<label-cs>}
{\<body>}
```

Iterates through all entries in all the glossaries (or just those listed in *<glossary labels>*) and does *<body>* if the category matches *<category-label>*. The control sequences *<glossary-cs>* and *<label-cs>* may be used in *<body>* to access the glossary label and entry label for the current iteration.

```
\newcommand{\glsforeachincategory}[5][\@glo@types]{%
  \forallglossaries[#1]{#3}%
  {%
    \forglsentries[#3]{#4}%
    {%
      \glsifcategory{#4}{#2}{#5}{}%
    }%
  }%
}
```

```
\glsforeachwithattribute[<glossary
labels>]{<attribute-label>}{\<attribute-value>}
{\<glossary-cs>}{\<label-cs>}{\<body>}
```

`\glsforeachwithattribute`

Iterates through all entries in all the glossaries (or just those listed in *<glossary labels>*) and does *<body>* if the category attribute *<attribute-label>* matches *<attribute-value>*. The control sequences *<glossary-cs>* and *<label-cs>* may be used in *<body>* to access the glossary label and entry label for the current iteration.

```
\newcommand{\glsforeachwithattribute}[6][\@glo@types]{%
```

```

\forallglossaries[#1]{#4}%
{%
  \forglsentries[#4]{#5}%
  {%
    \glsifattribute{#5}{#2}{#3}{#6}{}
  }%
}%
}%
}

```

If `\newterm` has been defined, redefine it so that it automatically sets the category label to index and add `\glsxtrpostdescription`.

```

\ifdef{\newterm}
{%
  \newterm
  \renewcommand*{\newterm}[2][]{%
    \newglossaryentry{#2}%
    {type=index,category=index,name={#2},%
     description={\glsxtrpostdescription\nopostdesc},#1}%
  }
}

```

Indexed terms are regular by default.

```

\glsxtrpostdescindex
\newcommand*{\glsxtrpostdescindex}{}%
}
{%

```

If the `symbols` package option was used, define a similar command for symbols, but set the default sort to the label rather than the name as the symbols will typically contain commands that will confuse `makeindex` and `xindy`.

```

\ifdef{\printsymbols}
{%

```

`\glsxtrnewsymbol` Unlike `\newterm`, this has a separate argument for the label (since the symbol will likely contain commands).

```

\newcommand*{\glsxtrnewsymbol}[3][]{%
  \newglossaryentry{#2}{name={#3},sort={#2},type=symbols,category=symbol,#1}%
}

```

Symbols are regular by default.

```

\glssetcategoryattribute{symbol}{regular}{true}

```

```

\glsxtrpostdescsymbol
\newcommand*{\glsxtrpostdescsymbol}{}%
}
{%

```

Similar for the numbers option.

```
\ifdef\printnumbers
{%
\glsxtrnewnumber
\ifdef\printnumbers
\newcommand*\glsxtrnewnumber[3][]{%
\newglossaryentry[#2]{name=#3}{sort=#2}{type=numbers,category=number,#1}%
}
}
```

Numbers are regular by default.

```
\glsxtrpostdescnumber
\newcommand*\glsxtrpostdescnumber{}%
{%
{}}
```

`\glsxtrsetcategory` Set the category for all listed labels. The first argument is the list of entry labels and the second argument is the category label.

```
\newcommand*\glsxtrsetcategory[2]%
{@for@glsxtr@label:=#1\do
{%
\glsfieldxdef{\@glsxtr@label}{category}{#2}%
}%
}
```

`\glsxtrsetcategoryforall` Set the category for all entries in the listed glossaries. The first argument is the list of glossary labels and the second argument is the category label.

```
\newcommand*\glsxtrsetcategoryforall[2]%
{forallglossaries[#1]{\@glsxtr@type}%
\forlentries[\@glsxtr@type]{\@glsxtr@label}%
{%
\glsfieldxdef{\@glsxtr@label}{category}{#2}%
}%
}%
}
```

`\glsxtrfieldtitlecase{<label>}{<field>}`

`\glsxtrfieldtitlecase`

Apply title casing to the contents of the given field.

```
\newcommand*\glsxtrfieldtitlecase[2]%
\expandafter\glsxtrfieldtitlecasecs\expandafter
{\csname glo@\glsdetoklabel{#1}@#2\endcsname}%
}
```

\glsxtrfieldtitlecasecs The command used by \glsxtrfieldtitlecase. May be redefined to use a different command, for example, \xcapitalisefmtwords. Check for \glscapitalisewords, which was added to glossaries v4.48.

```
\ifdef\glscapitalisewords
{
  \newcommand*\{\glsxtrfieldtitlecasecs}[1]{%
    \expandafter\glscapitalisewords\expandafter{#1}}
}
{
  \newcommand*\{\glsxtrfieldtitlecasecs}[1]{\xcapitalisewords{#1}}
}
```

Provide a convenient way to modify glossary styles without having to define a new style just to convert the first letter of fields to upper case.

\glossentrydesc If the glossdesc attribute is “firstuc” convert first letter to upper case. If the attribute is “title” use title case.

{%
}
```

Are we using an old version of `mfirstuc` that has a bug in `\capitalisewords`? If so, patch it so we don't have a problem with a combination of tagging and title case.

`\mfp@checkword@do` If this command hasn't been defined, then we have pre v2.02 of `mfirstuc`

```
\ifundefined\mfp@checkword@do
{
  \newcommand*\{\mfp@checkword@do}[1]{%
    \ifdefstring{\mfp@checkword@arg}{#1}%
    {%
      \let\@mfp@domakefirstuc\@firstofone
      \listbreak
    }%
    {}%
  }
}
```

`\mfp@checkword \capitalisewords` was introduced in `mfirstuc` v1.06. If `\mfp@checkword` hasn't been defined `mfirstuc` is too old to support the title case attribute.

```
\ifundefined\mfp@checkword
{
  \newcommand{\@glsxtr@do@titlecaps@warn}{%
    \GlossariesExtraWarning{mfirstuc.sty too old. Title Caps
      support not available}%
  }
}
```

One warning should suffice.

```
\let\@glsxtr@do@titlecaps@warn\relax
}
{
  \renewcommand*\{\mfp@checkword}[1]{%
    \def\mfp@checkword@arg{#1}%
    \let\@mfp@domakefirstuc\makefirstuc
    \forlistloop\mfp@checkword@do\@mfp@nocaplist
  }
}
{}% no patch required
```

`@glsxtr@do@titlecaps@warn` Do warning if title case not supported.

```
\newcommand*\{\@glsxtr@do@titlecaps@warn}{}%
```

`xtr@activate@initialtagging` Used in `\printglossary` but at least v4.19 of glossaries required.

```
\newcommand*\{@glsxtr@activate@initialtagging{}}
```

`@glsxtr@tag` Definition of tagging command when used in glossary.

```
\newrobustcmd*\{@glsxtr@tag}[1]{%
  \glsifattribute{\glscurrententrylabel}{tagging}{true}%
  {\glsxtrtagfont{#1}}{#1}%
}
```

`\glsxtrtagfont` Used in the glossary.

```
\newcommand*{\glsxtrtagfont}[1]{\underline{#1}}
```

`\@gls@preglossaryhook` This macro was introduced in `glossaries` version 4.19, so it may not be defined. If it hasn't been defined this feature is unavailable. A check is added for the entry's existence to prevent errors from occurring if the user removes an entry or changes the label, which can interrupt the build process.

```
\ifdef@\gls@preglossaryhook
{
    \renewcommand*{\@gls@preglossaryhook}{%
        \@glsxtr@activate@initialtagging}
```

Since the glossaries are automatically scoped, `\@glsxtr@org@postdescription` shouldn't already be defined, but check anyway just as a precautionary measure.

```
\ifundef{\glsxtr@org@postdescription}
{%
    \let\@glsxtr@org@postdescription\glspostdescription
    \renewcommand*{\glspostdescription}{%
        \ifglsentryexists{\glscurrententrylabel}{%
            \%
            \glsxtrpostdescription
            \glsxtr@org@postdescription
        }%
        {}%
    }%
}%
{}%
```

Enable the options used by `\@glsxtrp`:

```
\glossxtrsetopts
}%
}
```

`\glsxtrpostdescription` This command will only be used if `\@gls@preglossaryhook` is available *and* the glossary style uses `\glspostdescription` without modifying it. (`\nopostdesc` will suppress this.) The `glossaries-extra-stylemods` package will add the post description hook to all the predefined styles that don't include it.

```
\newcommand*{\glsxtrpostdescription}{%
    \csuse{\glsxtrpostdesc\glscategory{\glscurrententrylabel}}{}}
```

```
\glsxtrpostdescgeneral
\newcommand*{\glsxtrpostdescgeneral}{}%
```

`\glsxtrpostdescterm` This is redundant as it doesn't match any common categories. `\newterm` sets the category to index.

```
\newcommand*{\glsxtrpostdescterm}{}%
```

```

\glsxtrpostdescacronym
    \newcommand*{\glsxtrpostdescacronym}{}}

\glsxtrpostdescabbreviation
    \newcommand*{\glsxtrpostdescabbreviation}{}}

\glsdefpostdesc Provide a convenient command for defining the post-description hook for the
given category.
    \newcommand*{\glsdefpostdesc}[2]{%
        \csdef{glsxtrpostdesc#1}{#2}%
    }

\glspostlinkhook Redefine the post link hook used by commands like \gls to make it easier for
categories or attributes to modify this action. Since this hook occurs outside
the existence check of commands like \gls, this needs to be checked again here.
Do nothing if the entry hasn't been defined.
    \renewcommand*{\glspostlinkhook}{%
        \ifglsentryexists{\glslabel}{\glsxtrpostlinkhook}{}%
    }

\glsxtrpostlinkhook The entry label should already be stored in \glslabel by \gls@link.
    \newcommand*{\glsxtrpostlinkhook}{%
        \glsxtrdiscardperiod{\glslabel}%
        {\glsxtrpostlinkendsentence}%
        {\glsxtrifcustomdiscardperiod%
            {\glsxtrifperiod{\glsxtrpostlinkendsentence}{\glsxtrpostlink}}%
            {\glsxtrpostlink}%
        }%
    }

\glsxtrifcustomdiscardperiod Allow user to provide a custom check. Should expand to #2 if no check is
required otherwise expand to #1.
    \newcommand*{\glsxtrifcustomdiscardperiod}[2]{#2}

\glsxtrpostlink
    \newcommand*{\glsxtrpostlink}{%
        \csuse{glsxtrpostlink\glscategory{\glslabel}}%
    }

\glsdefpostlink Provide a convenient command for defining the post-link hook for the given cate-
category. Doesn't allow an empty argument (which) would overwrite \glsxtrpostlink.
    \newcommand*{\glsdefpostlink}[2]{%
        \ifthenelse{\equal{#1}{}}{%
            \PackageError{glossaries-extra}{%
                Invalid empty category label in \string\glsdefpostlink{}%
            }%
            \csdef{glsxtrpostlink#1}{#2}%
        }%
    }

```

`\glspretopostlink` Similar to the above but prepend.

```
\newcommand*{\glspretopostlink}[2]{%
  \ifthenelse{\equal{#1}{}}{%
    {\PackageError{glossaries-extra}{%
      {Invalid empty category label in \string\glspretopostlink}{}{}}%
  }%
  \ifcsundef{glsxtrpostlink#1}{%
    {\csdef{glsxtrpostlink#1}{#2}}%
    {\cspreto{glsxtrpostlink#1}{#2}}%
  }%
}
}
```

`\glsapptopostlink` Similar to the above but append.

```
\newcommand*{\glsapptopostlink}[2]{%
  \ifthenelse{\equal{#1}{}}{%
    {\PackageError{glossaries-extra}{%
      {Invalid empty category label in \string\glsapptopostlink}{}{}}%
  }%
  \ifcsundef{glsxtrpostlink#1}{%
    {\csdef{glsxtrpostlink#1}{#2}}%
    {\csappto{glsxtrpostlink#1}{#2}}%
  }%
}
}
```

`\glsxtrpostlinkendsentence` Done by `\glsxtrpostlinkhook` if a full stop is discarded.

```
\newcommand*{\glsxtrpostlinkendsentence}{%
  \ifcsdef{glsxtrpostlink\glscategory{\glslabel}}{%
    \csuse{glsxtrpostlink\glscategory{\glslabel}}%
  }%
}
```

Put the full stop back.

```
.\spacefactor\sfcod\`.\relax
}%
}
```

Assume the full stop was discarded because the entry ends with a period, so adjust the spacefactor.

```
\spacefactor\sfcod\`.\relax
}%
}
```

`\glsxtrpostlinkAddDescOnFirstUse` Provide a command for appending the description in parentheses on first use, for the convenience of users wanting to add this to the post link hook.

```
\newcommand*{\glsxtrpostlinkAddDescOnFirstUse}{%
```

```

\glsxtrifwasfirstuse{\glsxtrgenentrytextfmt{ }%
\glsxtrparen{\glsaccessfmtdesc{}{\glsxtrgenentrytextfmt}{\glslabel}}}{()}%
}

```

`\postlinkAddSymbolOnFirstUse` Provide a command for appending the symbol (if defined) in parentheses on first use, for the convenience of users wanting to add this to the post link hook.

```

\newcommand*{\glsxtrpostlinkAddSymbolOnFirstUse}{%
\glsxtrifwasfirstuse
{%
\ifglshassymbol{\glslabel}%
{\glsxtrgenentrytextfmt{ }%
\glsxtrparen{\glsaccessfmtsymbol{}{\glsxtrgenentrytextfmt}{\glslabel}}}{()}%
}%
{()}%
}

```

`\linkAddSymbolDescOnFirstUse` Provide a command for appending the symbol (if defined) and description in parentheses on first use, for the convenience of users wanting to add this to the post link hook.

```

\newcommand*{\glsxtrpostlinkAddSymbolDescOnFirstUse}{%
\glsxtrifwasfirstuse
{%
\glsxtrgenentrytextfmt{ }\glsxtrparen
{%
\ifglshassymbol{\glslabel}%
{\glsaccessfmtsymbol{}{\glsxtrgenentrytextfmt}{\glslabel}}%
\expandafter\glsxtrgenentrytextfmt\expandafter{\glsxtrpostlinkSymbolDescSep}}%
{()}%
\glsaccessfmtdesc{}{\glsxtrgenentrytextfmt}{\glslabel}}%
}%
{()}%
}

```

`\glsxtrpostlinkSymbolDescSep` Separator used in the above

```
\newcommand*{\glsxtrpostlinkSymbolDescSep}{, }
```

`\discardperiodretainfirstuse`

```

\newcommand*{\glsxtrdiscardperiodretainfirstuse}[3]{%
\glsxtrifwassubsequentorshort{\glsxtrifperiod{#2}{#3}}{#3}}%
}

```

`\glsxtrdiscardperiod` Discard following period (if present) if the `discardperiod` attribute is true. If a period is discarded, do the second argument otherwise do the third argument. The entry label is in the first argument. Since this is designed for abbreviations that end with a period, check if the plural form was used (which typically won't end with a period).

```

\newcommand*{\glsxtrdiscardperiod}[3]{%
  \glsifattribute{#1}{retainfirstuseperiod}{true}%
  {\glsxtrdiscardperiodretainfirstuse{#1}{#2}{#3}}%
  {%
    \glsifattribute{#1}{discardperiod}{true}%
    {%
      \glsifplural
      {%
        \glsifattribute{#1}{pluraldiscardperiod}{true}%
        {\glsxtrifperiod{#2}{#3}}%
        {#3}%
      }%
      {%
        \glsxtrifperiod{#2}{#3}%
      }%
    }%
    {#3}%
  }%
}

```

`\glsxtrifperiod` Make a convenient user command to check if the next character is a full stop (period). Works like `\@ifstar` but uses `\new@ifnextchar` rather than `\@ifnextchar`

```
\newcommand*{\glsxtrifperiod}[1]{\new@ifnextchar.{\@firstoftwo{#1}}}
```

Sometimes it's useful to test if there's a punctuation character following the glossary entry.

`\glsxtr@punctlist` List of characters identified as punctuation marks. (Be careful of `babel` short-hands!) This doesn't allow for punctuation marks made up from multiple characters (such as ',').

```
\newcommand*{\glsxtr@punctlist}{.,;?!}
```

`\glsxtraddpunctuationmark` Add character to punctuation list.

```
\newcommand*{\glsxtraddpunctuationmark}[1]{\appto\glsxtr@punctlist{#1}}
```

`\glsxtrsetpunctuationmarks` Reset the punctuation list.

```
\newcommand*{\glsxtrsetpunctuationmarks}[1]{\def\glsxtr@punctlist{#1}}
```

```
\glsxtrifnextpunc{\i{true part}}{\i{false part}}
```

`\glsxtrifnextpunc`

Test if this is followed by a punctuation mark. (Adapted from `\new@ifnextchar`.)

```

\newcommand*{\glsxtrifnextpunc}[2]{%
  \def\reserved@a{#1}%
  \def\reserved@b{#2}%
  \futurelet\glspunc@token\glsxtr@ifnextpunc
}

```

```

\glsxtr@ifnextpunc
    \newcommand*{\glsxtr@ifnextpunc}{%
        \glsxtr@ifpunctoken{`@glspunc@token}{\let\reserved@a{}%
            \reserved@b
        }
    }

\glsxtr@ifpunctoken Test if the token given in the first argument is in the punctuation list.
    \newcommand*{\glsxtr@ifpunctoken}[1]{%
        \expandafter\glsxtr@ifpunctoken\expandafter#1\glsxtr@punctlist\@nnil

    \def\@glsxtr@foundinlist#1\@nnil{@firstoftwo}

@\glsxtr@notfoundinlist
    \def\@glsxtr@notfoundinlist#1{@secondoftwo}

\glsxtrdopostpunc{<code>}

```

If this is followed by a punctuation character, do *<code>* after the character otherwise do *<code>* before whatever comes next.

```

\newrobustcmd{\glsxtrdopostpunc}[1]{%
    \glsxtr@ifnextpunc{@glsxtr@swaptwo{#1}}{#1}%
}

```

```

@\glsxtr@swaptwo
    \newcommand{@glsxtr@swaptwo}[2]{#2#1}

```

## 1.7 Abbreviations

The “acronym” code from `glossaries` is misnamed as it’s more often used for other forms of abbreviations. This code corrects this inconsistency, but rather than just having synonyms, provide commands for abbreviations that have a similar, but not identical, underlying mechanism to acronyms.

If there’s a style for the given category, it needs to be applied by `\newabbreviation`.

```
\define@key{glsxtrabbrv}{category}{%
  \protected@edef\glscategorylabel{\#1}%
}
```

The shortplural and longplural are parsed separately, so are now in another key family. Save the short plural form. This may be needed before the entry is defined.

```
\define@key{glsxtrabbrvp}{shortplural}{%
  \def\@gls@shortpl{\#1}%
}
```

Similarly for the long plural form.

```
\define@key{glsxtrabbrvp}{longplural}{%
  \def\@gls@longpl{\#1}%
}
```

Token registers for the short plural and long plural, provided for use in the abbreviation style definitions.

```
\glsshortpltok
  \newtoks\glsshortpltok

\glslongpltok
  \newtoks\glslongpltok
```

`\@glsxtr@insertdots` Provided in case user wants to automatically insert dots between each letter of the abbreviation. This should be applied before defining the abbreviation to optimise the document build. (Otherwise, it would have to be done each time the short form is required, which is an unnecessary waste of time.) For this to work the short form must be expanded when passed to `\newabbreviation`. Note that explicitly using the `short` or `shortplural` keys will override this.

```
\newcommand*{\@glsxtr@insertdots}[2]{%
  \def#1{}%
  \@glsxtr@insert@dots#1#2\@nnil
}
```

```
\@glsxtr@insert@dots
  \newcommand*{\@glsxtr@insert@dots}[2]{%
    \ifx\@nnil#2\relax
      \let\@glsxtr@insert@dots@next\@gobble
    \else
      \ifx\relax#2\relax
```

```

    \else
        \appto{\#1}{\#2.}%
    \fi
    \let\@glsxstr@insert@dots@next\@glsxstr@insert@dots
    \fi
    \glsxstr@insert@dots@next#1%
}

```

Similarly provide a way of replacing spaces with `\glsxtrwordsep`, which first needs to be defined:

```
\glsxtrwordsep
    \newcommand*{\glsxtrwordsep}{\glsxtrgenentrytextfmt{ }}
```

```
\glsxtrwordsephyphen
    \newcommand*{\glsxtrwordsephyphen}{\glsxtrgenentrytextfmt{-}}
```

Each word is marked with

```
\glsxtrword
    \newcommand*{\glsxtrword}[1]{\glsxtrgenentrytextfmt{\#1}}
```

```
\@glsxtr@markwordseps
    \newcommand*{\@glsxtr@markwordseps}[2]{%
        \def#1{}%
        \@glsxtr@mark@wordseps#1#2 \@nnil
    }
```

```
\@glsxtr@mark@wordseps
    \def\@glsxtr@mark@wordseps#1#2 #3{%
        \ifdefempty{\#1}{%
            {\def#1{\protect\glsxtrword{\#2}}{%
                {\appto{\#1{\protect\glsxtrword{\#2}}}{%
                    {\glsxtrword{\#2}}}}{%
                \ifx\@nil#3\relax
                    \let\@glsxtr@mark@wordseps@next\relax
                \else
                    \def\@glsxtr@mark@wordseps@next{%
                        \glsxtr@mark@wordseps#1#3}%
                \fi
                \@glsxtr@mark@wordseps@next
            }}{%
        }}
```

`\newabbreviation` Define a new generic abbreviation.

```
\newcommand*{\newabbreviation}[4][]{%
    \glsxtr@newabbreviation{\#1}{\#2}{\#3}{\#4}%
}
```

`\glsxtr@newabbreviation` Internal macro. (bib2gls has an option that needs to temporarily redefine `\newabbreviation`. This is just makes it easier to save and restore the original definition.)

```
\newcommand*{\glsxtr@newabbreviation}[4]{%
  \glskeylisttok{#1}%
  \glslabeltok{#2}%
  \glsshorttok{#3}%
  \glslongtok{#4}%
}
```

Save the original short and long values (before attribute settings modify them).

```
\def\glsxtrorgshort{#3}%

        Redefine \glsentryfull etc to use the inline format. Since these commands
are supposed to be expandable, they can only use the currently applied style.
If there are mixed styles, you'll need to use the \glsxtrfull set of commands
instead. If expandable sentence case is required, use \MFUsentencecase on the
non-case-change version.

}

```

### 1.7.2 Predefined Styles

Define some common styles. These will set the `first`, `firstplural`, `text` and `plural` keys, even if the `regular` attribute isn't set to "true". If this attribute is set, commands like `\gls` will use them as per a regular entry, otherwise those keys will be ignored unless explicitly invoked by the user with commands like `\glsfirst`. In order for the sentence case versions to work correctly, `\glsxtrfullformat` needs to be expanded when those keys are set. The final optional argument of `\glsfirst` will behave differently to the final optional argument of `\gls` with some styles.

v1.49 has introduced `innertextformat` for formatting commands that need access to the actual text (which is normally too deeply embedded). The styles

have been modified to allow for this. The all caps versions also now need to be implemented within the styles as again the text is now to deeply embedded for the case change to otherwise work.

\ifglsxtrinsertinside Switch to determine if the insert text should be inside or outside the font changing command. The default is outside.

```
\newif\ifglsxtrinsertinside  
\glsxtrinsertinsidetru
```

The abbreviation styles are now defined in the file `glossaries-extra-abbrstyles.def`, which needs to be input here:

```
\input{glossaries-extra-abbrstyles.def}
```

## 1.8 Using Entries in Headings

There are four main problems with using entries in sectioning commands: they can mess with the first use flag if they end up in the table of contents, they can add unwanted numbers to the entry's location list, the label is corrupted if used inside `\MakeUppercase` (which is used by the default headings style) and they need to be expandable for PDF bookmarks. The `glossaries` package therefore recommends the use of the expandable commands, such as `\glsentryshort`, instead but this doesn't reflect the formatting since it doesn't include `\glsabbrvfont`. The commands below are an attempt to get around these problems.

The PDF bookmark issue can easily be fixed with `hyperref`'s `\texorpdfstring` which can simply use the expandable command in the PDF string case. The TeX string case can now use `\glsxtrshort` with the `noindex` key set, which prevents the unwanted additions to the location list, and the `hyper` key set to false, which prevents the problem of nested links. This just leaves one thing left that needs to be dealt with, and that's what to do if the heading style uses `\MakeUppercase`.

Note that `glossaries` automatically loads `textcase` unless `mfistuc 2.08+` is detected, so the label can be protected from case change with `textcase`'s `\NoCaseChange`. This means that we don't have a problem provided the page style uses `\MakeTextUppercase`, but the default heading page style uses `\MakeUppercase`. (With newer versions of `mfistuc`, exclusions are used to protect labels).

To get around this, save the original definition of `\markboth` and `\markright` and adjust it so that `\MakeUppercase` is temporarily redefined to `\MakeTextUppercase`. Some packages or classes redefine these commands, so we can't just assume they still have the original kernel definition. This only needs to be done with old versions of `mfistuc`.

\markright Save original definition:

```
\let\@glsxtr@org\markright\markright
```

Redefine (grouping not added in case it interferes with the original code):

```
\renewcommand*{\markright}[1]{%
  \glsxtrmarkhook
  \@glsxtr@org@markright{\@glsxtrinmark#1\@glsxtrnotinmark}%
  \glsxtrrestoremarkhook
}
```

\markboth Save original definition:

```
\let\@glsxtr@org@markboth\markboth
```

Redefine (grouping not added in case it interferes with the original code):

```
\renewcommand*{\markboth}[2]{%
  \glsxtrmarkhook
  \@glsxtr@org@markboth
  {\@glsxtrinmark#1\@glsxtrnotinmark}%
  {\@glsxtrinmark#2\@glsxtrnotinmark}%
  \glsxtrrestoremarkhook
}
```

Also do this for \@starttoc

\@starttoc Save original definition:

```
\let\@glsxtr@org@@starttoc\@starttoc
```

Redefine:

```
\renewcommand*{\@starttoc}[1]{%
  \let\glsxtrifintoc\@firstoftwo
  \glsxtrmarkhook
  \@glsxtrinmark
  \@glsxtr@org@@starttoc{#1}%
  \@glsxtrnotinmark
  \glsxtrrestoremarkhook
  \let\glsxtrifintoc\@secondoftwo
}
```

If this causes a problem provide a simple way of switching back to the original definitions:

```
\glsxtrRevertMarks
\newcommand*{\glsxtrRevertMarks}{%
  \let\markright\@glsxtr@org@markright
  \let\markboth\@glsxtr@org@markboth
  \let\@starttoc\@glsxtr@org@@starttoc
}
```

\glsxtrRevertTocMarks Just restores \@starttoc.

```
\newcommand*{\glsxtrRevertTocMarks}{%
  \let\@starttoc\@glsxtr@org@@starttoc
}
```

```

\glsxtrifinmark
\newcommand*{\glsxtrifinmark}[2]{#2}

@glsxtrinmark
\newrobustcmd*{\@glsxtrinmark}{%
  \let\glsxtrifinmark\firstoftwo
}

@glsxtrnotinmark
\newrobustcmd*{\@glsxtrnotinmark}{%
  \let\glsxtrifinmark\secondoftwo
}

\glsxrttitleorpdforheading
\newcommand*{\glsxrttitleorpdforheading}[3]{%
  \glsxtrifinmark{#3}{\glistexpandafter{\string#1\string#2}}}

  This will require \GetStringSetup{expand} to work.

\ifdef{\GetStringDisableCommands}
{\GetStringDisableCommands{\let\glsxrttitleorpdforheading\thirdofthree
  \let\glsxtrifinmark\firstoftwo}}
{}

\glsxtrmarkhook Hook used in new definition of \markboth and \markright to make some
changes to apply to the marks:
\newcommand*{\glsxtrmarkhook}{%}

## 1.9 Prefixes

Provide support for glossaries-prefix.

```
\pglsprefix{\<entry-label>}{\<prefix-field>}
```

\pglsprefix A shortcut way of inserting the prefix and separator if they are required. If this needs to be redefined, use \ifglsfieldvoid for an expandable test.

```
\newcommand{\pglsprefix}[2]{%
  \ifcsempty{glo@\glsdetoklabel{#1}@#2}{}}
```

```
{\csuse{glo@\glstoklabel{\#1}\#2}\glsprefixsep}%
}
```

\Pglsprefix{\i{entry-label}}{\i{prefix-field}}

\Pglsprefix

Similar to \pglsprefix but sentence case. The conditional is omitted as it will have to already be checked.

```
\newcommand{\Pglsprefix}[2]{%
  \Glsxtruefield{\#1}{\#2}\glsprefixsep
}
```

\PGLSprefix{\i{entry-label}}{\i{prefix-field}}

\PGLSprefix

As \pglsprefix but all caps.

```
\newcommand{\PGLSprefix}[2]{%
  \ifcsempty{glo@\glstoklabel{\#1}\#2}{}{%
    {\glsuppercase{\csuse{glo@\glstoklabel{\#1}\#2}\glsprefixsep}}%
  }}
```

Abbreviations. Short form uses prefix and prefixplural fields.

\pglsxtrshort No case-change.

```
\newrobustcmd*\pglsxtrshort{@gls@hyp@opt\ns@pglsxtrshort}
\newcommand*\ns@pglsxtrshort[2][]{%
  \new@ifnextchar[{\@pglsxtrshort{\#1}{\#2}}{\@pglsxtrshort{\#1}{\#2}}[]}{%
}
\def\@pglsxtrshort#1#2[#3]{%
  \pglsprefix{\#2}{prefix}%
  \@glsxtrshort{\#1}{\#2}{#3}%
}
```

\Pglsxtrshort Sentence case.

```
\newrobustcmd*\Pglsxtrshort{@gls@hyp@opt\ns@Pglsxtrshort}
\newcommand*\ns@Pglsxtrshort[2][]{%
  \new@ifnextchar[{\@Pglsxtrshort{\#1}{\#2}}{\@Pglsxtrshort{\#1}{\#2}}[]}{%
}
\def\@Pglsxtrshort#1#2[#3]{%
  \ifglshasprefix{\#2}{%
    \Pglsprefix{\#2}{prefix}%
    \@glsxtrshort{\#1}{\#2}{#3}%
  }%
  {\@Glsxtrshort{\#1}{\#2}{#3}}%
}
\glsmfuaddmap{\pglsxtrshort}{\Pglsxtrshort}
```

```

\PGLSxtrshort All-caps is also fairly simple.

\newrobustcmd*\{\PGLSxtrshort\}{\gls@hyp@opt\ns@PGLSxtrshort}
\newcommand*\{\ns@PGLSxtrshort\}[2][]{%

## 1.10 Multi (Combined/Compound) Entries

(I'd rather call these combined or compound entries but `\cgls` is already taken.)

New to version 1.48, the commands here provide a way of referencing multiple entries as a single unit. For example, biological organisms are often referred to by their genus and species, such as *Clostridium botulinum* and *Clostridium perfringens* (where the genus is *Clostridium*). The genus is often abbreviated after first use, regardless of which species in the genus is being referenced. For example, “*Clostridium botulinum* and *C. perfringens*”. This can't be supported by any abbreviation styles unless the genus and species names are defined separately. For example:

```
%\setabbreviationstyle{long-only-short-only}
%\newabbreviation{clostridium}{C.}{Clostridium}
%\newglossaryentry{botulinum}{name={botulinum},description={}}
%\newglossaryentry{perfringens}{name={perfringens},description={}}
%
```

This means that the entries then need to be referenced using a rather cumbersome method:

```
%\gls{clostridium} \gls{botulinum} and \gls{clostridium}
%\gls{perfringens}
%
```

This section provides a command that will provide a way of defining a label that represents a combination of entries (which must all be first defined). For example:

```
%\multiglossaryentry{cbot}{clostridium,botulinum}
%
```

This label can then be referenced using `\mgls`, which internally uses `\gls` for each component. The last component in the list is considered the “main” component (not to be confused with the main glossary). If this isn't the case, the label of the main component should be added in the optional argument before the label list. Note that the multi-label (`cbot` in this case) can't be referenced using commands like `\gls`.

First define the general set of options that should be applied to all multi-entries. These can be set with:

```
\multiglossaryentrysetup
    \newcommand*\multiglossaryentrysetup[1]{\setkeys{glsxtrcombined}{#1}}
@gls@combined@indexmain Numeric value: 0=false (don't index main component), 1=true (always index main component), 2=first (only index main component on first use). Default: 1 (true);
    \newcommand*\@gls@combined@indexmain[1]
    \define@choicekey{glsxtrcombined}{indexmain}%
        [\@gls@combined@indexmain@val@\gls@combined@indexmain]
        {false,true,first}[true]{}
```

\@gls@combined@indexothers Numeric value: 0=false (don't index other components), 1=true (always index other components), 2=first (only index other components on first use). Default: 2 (first);

```
\newcommand*{\@gls@combined@indexothers}{2}
\define@choicekey{glsxtrcombined}{indexothers}%
  [\@gls@combined@indexothers@val \@gls@combined@indexothers]
  {false,true,first}[true]{}
```

\@gls@combined@hyper Numeric value: 0=none (\mglS doesn't create a hyperlink), 1=allmain (all content hyperlinks to the main component), 2=mainonly (only the main component has a hyperlink), 3=individual (each component has a hyperlink to their own target). Default: 3.

```
\newcommand*{\@gls@combined@hyper}{3}
\define@choicekey{glsxtrcombined}{hyper}%
  [\@gls@combined@hyper@val \@gls@combined@hyper]
  {none,allmain,mainonly,individual,otheronly,notmainfirst,nototherfirst,notfirst}{}
```

\@gls@combined@encapmain Location encap value for main component (corresponding to format key in \gls).

```
\newcommand*{\@gls@combined@encapmain}{glsnumberformat}
\define@key{glsxtrcombined}{encapmain}{%
  \renewcommand*{\@gls@combined@encapmain}{#1}}
```

\@gls@combined@encapothers Location encap value for other components (corresponding to format key in \gls).

```
\newcommand*{\@gls@combined@encapothers}{glsnumberformat}
\define@key{glsxtrcombined}{encapothers}{%
  \renewcommand*{\@gls@combined@encapothers}{#1}}
```

\@gls@combined@textformat Encapsulate entire content with the command identified by the given control sequence name.

```
\newcommand*{\@gls@combined@textformat}{@firstofone}
\define@key{glsxtrcombined}{textformat}{%
  \renewcommand*{\@gls@combined@textformat}{#1}}
```

\@gls@combined@category Assign a category to the combined set.

```
\newcommand*{\@gls@combined@category}{}%
\define@key{glsxtrcombined}{category}{%
  \renewcommand*{\@gls@combined@category}{#1}}%
```

Pre-options family:

```

\@glsxtr@mglswrite Write information to the aux file for `bib2gls` to pick up, but only need to do it once per label since it only indicates which multi-entry has been referenced without any additional information.

```
\newcommand{\glsxtrmglswrite}[1]{%  
    \ifx\@glsxtr@record@setting\@glsxtr@record@setting@off  
    \else  
        \protected@edef\@glsxtr@mglslabel{#1}%

        \protected@write\@auxout{}{\string\@glsxtr@mglrefs{#1}}%  
    \else  
        \expandonce  
    
```

Bug fix #262: `\immediate\protected@write` doesn't work in end document hook when tikz loaded. No real need for `\protected@write` as `\@glsxtr@mglereflist` is just a comma-separated list of labels, but use `\expandonce` in case labels contain UTF-8 characters.

```
    \AtEndDocument{\immediate\write\@auxout

Only use plural for main element and first letter uppercase all elements.

```
\glsxtr@newmgl{MPglsmainpl}{\@Pgl{orgl}{s}{\@gl{}}{\@Pgl{orgl}{sp}{\@gl{}}{\%}\gl{smfu}{blocker}{\MPglsmainpl}}
```

\MPGLS

```
\MPGLS[\langle options \rangle]{\langle label \rangle}{\langle insert \rangle}
```

Use \PGL{ for the first element and \GL{ for the remainder.

```
\glsxtr@newmgl{MPGLS}{\@PGL{orgl}{s}{\@GL{}}{\@PGL{orgl}{s}{\@GL{}}{\%}\gl{smfu}{blocker}{\MPGLS}}
```

\MPGLSpl

```
\MPGLSpl[\langle options \rangle]{\langle label \rangle}{\langle insert \rangle}
```

Use \PGL{sp{l} for the first element and \GL{sp{l} for the remainder.

```
\glsxtr@newmgl{MPGLSpl}{\@PGL{orgl}{sp}{\@GL{}}{\@PGL{orgl}{sp}{\@GL{}}{\%}\gl{smfu}{blocker}{\MPGLSpl}}
```

\MPGLSmainpl

```
\MPGLSmainpl[\langle options \rangle]{\langle label \rangle}{\langle insert \rangle}
```

Only use plural for main element and uppercase all elements.

```
\glsxtr@newmgl{MPGLSmainpl}{\@PGL{orgl}{s}{\@GL{}}{\@PGL{orgl}{sp}{\@GL{}}{\%}\gl{smfu}{blocker}{\MPGLSmainpl}}
```

Not currently implementing any other variations.

## 1.11 Multi-Lingual Support

Add the facility to load language modules, if they are installed, but none are provided with this package.

```
\glsxtrcontinuedname Provide for use in \printunsrttable.  
    \providecommand{\glsxtrcontinuedname}{continued}  
  
\RequireGlossariesExtraLang  
    \newcommand*{\RequireGlossariesExtraLang}[1]{%  
        \@ifundefined{ver@glossariesxtr-\#1.ldf}{\input{glossariesxtr-\#1.ldf}}{}%  
    }  
  
\ProvidesGlossariesExtraLang  
    \newcommand*{\ProvidesGlossariesExtraLang}[1]{%  
        \ProvidesFile{glossariesxtr-\#1.ldf}%  
    }
```

Load any required language modules that are available. This doesn't generate any warning if none are found, since they're not essential. (The only command that really needs defining for the document is `\abbreviationsname`, which can simply be redefined. However, with `bib2gls` it might be useful to provide custom rules for a particular locale.)

`\glsxtr@loaddialect` The dialect label should be stored in `\this@dialect` before using this command.

```
\newcommand{\glsxtr@loaddialect}{%  
    \IfTrackedLanguageFileExists{\this@dialect}{%  
        {glossariesxtr-}\ prefix  
        {.ldf}%%  
        {\%  
            \RequireGlossariesExtraLang{\CurrentTrackedTag}%%  
        }%  
    }%  
    {}% not found
```

If `glossaries-extra-bib2gls` has been loaded, `\@glsxtrdialecthook` will check for the associated script, otherwise it will do nothing.

```
\@glsxtrdialecthook  
{  
    \@ifpackageloaded{tracklang} {  
        \AnyTrackedLanguages  
        {  
            \ForEachTrackedDialect{\this@dialect}{\glsxtr@loaddialect}%%  
        }%  
    }%  
}
```

The style needs to be set at the end to ensure that `\setglossarystyle` has been redefined and extra style commands have been defined. Load `glossaries-extra-stylemods` if required.

```
\@glsxtr@redefstyles
```

and set the style:

```
\@glsxtr@do@style
```

## 2 Predefined Abbreviation Styles (`glossaries-extra-abbrstyles.def`)

```
\ProvidesFile{glossaries-extra-abbrstyles.def}[2023/06/28 v1.52 (NLCT)]
```

This file contains the predefined abbreviation styles. Some helper commands first.

```
\glsxtrlongshortname
\newcommand*{\glsxtrlongshortname}{%
  \glsxpabbrvfont{\the\glsshorttok}\glscategorylabel}%
}
```

Provide convenient wrappers for common formats.

```
\glsxtrlongformat{\label}{\insert}{\longfmtcs}
```

```
\glsxtrlongformat
```

```
\newcommand*{\glsxtrlongformat}[3]{%
```

Don't add inner formatting if markwords attribute set as the inner formatting is implemented within `\glsxtrword` and `\glsxtrwordsep`.

`\glsfirstlongfootnotefont` Only used by the “footnote” styles.

```
\newcommand*\glsfirstlongfootnotefont[1]{\glslongfootnotefont{#1}}%
```

`\glslongfootnotefont` Only used by the “footnote” styles.

```
\newcommand*\glslongfootnotefont[1]{\glslongdefaultfont{#1}}%
```

```
\glsxtrabbrvfootnote{\label}{\long}
```

`\glsxtrabbrvfootnote`

Command used by footnote abbreviation styles. The default definition ignores the first argument. The second argument `\long` includes the font changing command and may be the singular or plural form, depending on the command that was used (for example, `\gls` or `\glspl`).

```
\newcommand*\glsxtrabbrvfootnote[2]{\footnote{#2}}
```

`\glsxtrpostabbrvfootnote` Used by post-footnote style to include formatting.

```
\newrobustcmd*\glsxtrpostabbrvfootnote[2]{%
\glsxtrabbrvfootnote{#1}%
{#2\glsxtrpostfootnotelongformat{#1}{\glsfirstlongfootnotefont}}%
}
```

`\xpglsxtrpostabbrvfootnote` Perform all the appropriate expansions to ensure `\glslabel` and `\glsxtrassignlinktextfmt` are expanded as they may be lost by the time the footnote occurs.

```
\newcommand*\xpglsxtrpostabbrvfootnote{%
\expandafter\expandafter\expandafter
```

```

\glsxtrpostabbrvfootnote
\expandafter\expandafter\expandafter
{\expandafter\glslabel\expandafter}\expandafter
{\glsxtrassignlinktextfmt}%
}

\glsxtrfootnotename
\newcommand*{\glsxtrfootnotename}{%
\glsxpabbrvfont{\the\glsshorttok}{\glscategorylabel}%
}

footnote Short form followed by long form in footnote on first use.
\newabbreviationstyle{footnote}{%
f%
}

Set accessibility attributes if enabled. (Add firstshortaccess since long form is hidden in a footnote on first use.) The inner formatting isn't be applied to the footnote text because the innertextformat key value may have gone out of scope by that the time the footnote text is processed. (Neither is the outer formatting applied.)
\glsxtrAccSuppAbbrSetNoLongAttrs\glscategorylabel

Setup the default fields.
\renewcommand*{\CustomAbbreviationFields}{%
name={\glsxtrfootnotename},
sort={\the\glsshorttok},
description={\the\glslongtok},%
first={\glsfirstxpabbrvfont{\the\glsshorttok}{\glscategorylabel}%

## 2.2 Predefined Styles (Small Capitals)

These styles use `\textsc` for the short form.

`\glsxtrscfont` Maintained for backward-compatibility.

```
\newcommand*{\glsxtrscfont}[1]{\textsc{#1}}
```

`\glsabrvscfont` Added for consistent naming.

```
\newcommand*{\glsabrvscfont}{\glsxtrscfont}
```

`\glsxtrfirstscfont` Maintained for backward-compatibility.

```
\newcommand*{\glsxtrfirstscfont}[1]{\glsabrvscfont{#1}}
```

`\glsfirstabrvscfont` Added for consistent naming.

```
\newcommand*{\glsfirstabrvscfont}{\glsxtrfirstscfont}
```

and for the default short form suffix:

`\glsxtrscsuffix` `\protect` needs to come inside `\glsxtrscsuffix` to avoid interfering with all caps.

```
\newcommand*{\glsxtrscsuffix}{\protect\glslinkw{glsxtrabrvpluralsuffix}}
```

`\glsxtrscrevert` Cancel smallcaps.

```
\newcommand*{\glsxtrscrevert}[1]{\glslinkw{glsxtrsc}{#1}}%
```

v1.49: the following now use commands like `\glsfirstinnerfmtabrvfont` instead of `\glsfirstabrvscfont` etc. This makes it easier to apply the inner formatting. The scoping added in v1.48 with `\glslinkwrcontent` should prevent formatting leakage in the event of nested commands. The only problem will be if commands like `\glsentryfirst` are used, but those aren't designed for consistent formatting. It will also make it easier to locally redefine `\glsfirstinnerfmtabrvfont` to strip the formatting if those commands are used (rather than having to define all the possible abbreviation style formatting commands). Since these new commands are robust they don't need protecting.

```

## 2.3 Predefined Styles (Fake Small Capitals)

These styles require the `relsize` package, which must be loaded by the user. These styles all use:

`\glsxtrsmfont` Maintained for backward compatibility.  
`\newcommand*{\glsxtrsmfont}[1]{\textsmaller{#1}}`

`\glsabbrvsmfont` Added for consistent naming.  
`\newcommand*{\glsabbrvsmfont}{\glsxtrsmfont}`

`\glsxtrfirstsmfont` Maintained for backward compatibility.  
`\newcommand*{\glsxtrfirstsmfont}[1]{\glsabbrvsmfont{#1}}`

`\glsfirstabbrvsmfont` Added for consistent naming.  
`\newcommand*{\glsfirstabbrvsmfont}{\glsxtrfirstsmfont}`

and for the default short form suffix:

`\glsxtrsmsuffix`  
`\newcommand*{\glsxtrsmsuffix}{\glsxtrabbrvpluralsuffix}`

`\glsxtrsmrevert`  
`\newcommand*{\glsxtrsmrevert}[1]{\textlarger{#1}}`

`long-short-sm`  
`\newabbreviationstyle{long-short-sm}{%`  
`}%`

Set accessibility attributes if enabled.

`\glsxtrAccSuppAbbrSetFirstLongAttrs\glscategorylabel`

Setup the default fields.

```
\renewcommand*{\CustomAbbreviationFields}{%
  name={\glsxtrlongshortname},
  sort={\the\glsshorttok},
  first={\glsfirstxplongfont{\the\glslongtok}{\glscategorylabel}}%

```

`postfootnote-em` Backward compatibility:

```
\@glsxtr@deprecated@abbrstyle{postfootnote-em}{short-em-postfootnote}
```

`short-em-postfootnote-desc` Like `short-em-postfootnote` but with user supplied description.

```
\newabbreviationstyle{short-em-postfootnote-desc}%
{%
}
```

Set accessibility attributes if enabled.

```
\glsxtrAccSuppAbbrSetNameLongAttrs\glscategorylabel
```

Setup the default fields.

```
\renewcommand*{\CustomAbbreviationFields}{%
  name={\glsxtrfootnotedescname},
  sort={\glsxtrfootnotedescsort},
  first={\glsfirstxpabrvfont{\the\glsshorttok}{\glscategorylabel}},%
  firstplural={\glsfirstxpabrvfont{\the\glsshortpltok}{\glscategorylabel}},%
  text={\glsxpabrvfont{\the\glsshorttok}{\glscategorylabel}},%
  plural={\glsxpabrvfont{\the\glsshortpltok}{\glscategorylabel}}}%
```

Make this category insert a footnote after the link if this was the first use, and unset the `regular` attribute if it has been set. Previously this was done by redefining `glsxtrsetupfulldefs` but that interferes with other styles. Instead, this now uses `\glsxtrifwasglslike`

```
\renewcommand*{\GlsXtrPostNewAbbreviation}{%
  \csdef{glsxtrpostlink\glscategorylabel}{%
    \glsxtrifwasglslikeandfirstuse
  }%
}%
\glshasattribute{\the\glslabeltok}{regular}%
{%
  \glssetattribute{\the\glslabeltok}{regular}{false}%
}%
\GlsXtrUseAbbrStyleFmts{short-em-postfootnote}%
}
```

## 2.5 Predefined Styles (User Parentheses Hook)

These styles allow the user to adjust the parenthetical forms. These styles all test for the existence of the field given by:

\glsxtruserfield Default is the useri field.

```
\newcommand*{\glsxtruserfield}{useri}
```

\glsxtruserparenssep Separator used inside parenthetical content.

```
\newcommand*{\glsxtruserparenssep}{, }
```

\glsxtruserfieldfmt Used to format the value of the field given by \glsxtruserfield.

```
\newcommand*{\glsxtruserfieldfmt}[1]{#1}
```

\glsxtruserparen The format of the parenthetical information. The first argument is the long/short form. The second argument is the entry's label. If \glscurrentfieldvalue has been defined, then we have at least glossaries v4.23, which makes it easier for the user to adjust this.

```
\ifdef\glscurrentfieldvalue
{
  \newcommand*{\glsxtruserparen}[2]{%
    \glsxtrfullsep{#2}%
    \glsxtrparen
    {#1\ifglshasfield{\glsxtruserfield}{#2}%
      {\expandafter\glsxtrgenentrytextfmt\expandafter{\glsxtruserparenssep}%
       \glsxtruserfieldfmt{\expandafter\glsxtrgenentrytextfmt\expandafter{\glscurrentfieldvalue}}%
      }{}%
    }%
  }
}

\newcommand*{\glsxtruserparen}[2]{%
  \glsxtrfullsep{#2}%
  \glsxtrparen
  {#1\ifglshasfield{\glsxtruserfield}{#2}%
    {\expandafter\glsxtrgenentrytextfmt\expandafter{\glsxtruserparenssep}%
     \glsxtruserfieldfmt{\expandafter\glsxtrgenentrytextfmt\expandafter{\@glo@thisvalue}}%
    }{}%
  }%
}
```

\GLSxtruserparen As above but converts the user supplied information to all-caps. The first argument should be provided in all-caps if required.

```
\ifdef\glscurrentfieldvalue
{
  \newcommand*{\GLSxtruserparen}[2]{%
    \glsxtrfullsep{#2}%
    \glsxtrparen
```

```

{#1\ifglshasfield{\glsxtruserfield}{#2}%
 {\expandafter\glsxtrgenentrytextfmt\expandafter{\glsxtruserparenssep}%
 \glsxtruserfieldfmt{\expandafter\mfirstucMakeUppercase\expandafter{\expandafter
 \glsxtrgenentrytextfmt\expandafter{\glscurrentfieldvalue}}}}%
 }{}%
 }%
}
{
\newcommand*{\GLSxtruserparen}[2]{%
 \glsxtrfullsep{#2}%
 \glsxtrparen
{#1\ifglshasfield{\glsxtruserfield}{#2}%
 {\expandafter\glsxtrgenentrytextfmt\expandafter{\glsxtruserparenssep}%
 \glsxtruserfieldfmt{\expandafter\mfirstucMakeUppercase\expandafter{\expandafter
 \glsxtrgenentrytextfmt\expandafter{\@glo@thisvalue}}}}%
 }{}%
 }%
}
}

```

Font used for short form:

```
\glsabbrvuserfont
\newcommand*{\glsabbrvuserfont}[1]{\glsabbrvdefaultfont{#1}}
```

Font used for short form on first use:

```
\glsfirstabbrvuserfont
\newcommand*{\glsfirstabbrvuserfont}[1]{\glsabbrvuserfont{#1}}
```

Font used for long form:

```
\glslonguserfont
\newcommand*{\glslonguserfont}[1]{\glslongdefaultfont{#1}}
```

Font used for long form on first use:

```
\glsfirstlonguserfont
\newcommand*{\glsfirstlonguserfont}[1]{\glslonguserfont{#1}}
```

The default short form suffix:

```
\glsxtrusersuffix
\newcommand*{\glsxtrusersuffix}{\glsxtrabbrvpluralsuffix}

Description encapsulator.
```

\glsuserdescription The first argument is the description. The second argument is the label.

```
\newcommand*{\glsuserdescription}[2]{\glslonguserfont{#1}}
```

```

## 2.6 Predefined Styles (Hyphen)

These styles are designed to work with the `markwords` attribute. They check if the inserted material (provided by the final optional argument of commands like `\gls`) starts with a hyphen. If it does, the insert is added to the parenthetical material. Note that commands like `\glsxtrlong` set `\glsinsert` to empty with the entire link-text stored in `\glscustomtext`.

`\glsxtrifhyphenstart` Checks if the argument starts with a hyphen. The argument may be `\glsinsert` so check for that and expand.

```
\newrobustcmd*{\glsxtrifhyphenstart}[3]{%
  \ifx\glssublabel\empty
    \expandafter\glsxtrifhyphenstart#1\relax\relax
  \else
    \expandafter\glsxtrifhyphenstart#1\relax\relax
    \expandafter\glsxtrifhyphenstart\@end\glsxtrifhyphenstart{#2}{#3}%
  \fi
}
```

\@glsxtrifhyphenstart

```
\def\@glsxtrifhyphenstart#1#2\@end\@glsxtrifhyphenstart#3#4{%
  \ifx-#1\relax#3\else #4\fi
}
```

```
\glsxtrlonghyphenshort{\langle label \rangle}{\langle long \rangle}{\langle short \rangle}{\langle insert \rangle}
```

\glsxtrlonghyphenshort

The `<long>` and `<short>` arguments may be the plural form. The `<long>` argument may also be the first letter uppercase form. This unfortunately doesn't

fit in with the new `\glsxtrshortformat` etc commands, but is retained for backward-compatibility. This means that the inserted part has to have a separate encapsulation for the inner format. The `long` and `short` arguments will need to include the inner format.

```
\newcommand*{\glsxtrlonghyphenshort}[4]{%
```

Grouping is needed to localise the redefinitions.

```
{%
```

If `insert` starts with a hyphen, redefine `\glsxtrwordsep` to a hyphen. The inserted material is also inserted into the parenthetical part. (The inserted material is grouped as a precautionary measure.) No change is made to `\glsxtrwordsep` if `insert` doesn't start with a hyphen.

```
\glsxtrifhyphenstart{#4}{\let\glsxtrwordsep\glsxtrwordsephyphen}{%
\glsfirstlonghyphenfont{#2\ifglsxtrinsertinside
{\glsxtrgenentrytextfmt{#4}}\fi}%
\ifglsxtrinsertinside\else{\glsxtrgenentrytextfmt{#4}}\fi
\glsxtrfullsep{#1}%
\glsxtrparen{\glsfirstabbrvhyphenfont{#3\ifglsxtrinsertinside
{\glsxtrgenentrytextfmt{#4}}\fi}%
\ifglsxtrinsertinside\else{\glsxtrgenentrytextfmt{#4}}\fi}%
}%
}
```

`\GLSxtrlonghyphenshort` As above but convert the insert to uppercase. The long and short should already have the case-change applied.

```
\newcommand*{\GLSxtrlonghyphenshort}[4]{%
\glsxtrifhyphenstart{#4}{\let\glsxtrwordsep\glsxtrwordsephyphen}{%
\glsfirstlonghyphenfont{#2\ifglsxtrinsertinside
{\mfirstucMakeUppercase{\glsxtrgenentrytextfmt{#4}}}\fi}%
\ifglsxtrinsertinside\else
{\mfirstucMakeUppercase{\glsxtrgenentrytextfmt{#4}}}\fi
\glsxtrfullsep{#1}%
\glsxtrparen{\glsfirstabbrvhyphenfont{#3\ifglsxtrinsertinside
{\mfirstucMakeUppercase{\glsxtrgenentrytextfmt{#4}}}\fi}%
\ifglsxtrinsertinside\else
{\mfirstucMakeUppercase{\glsxtrgenentrytextfmt{#4}}}\fi}%
}%
}
```

`\glsxtrshorthypennolong{\langle label \rangle}{\langle short \rangle}{\langle insert \rangle}`

`\glsxtrshorthypennolong`

The `short` argument may be the plural form and may also be the first letter uppercase form.

As `\glsxtrlonghyphenshort` but where only the short form should be shown.

```
\newcommand*{\glsxtrshorthypennolong}[3]{%
```

Grouping is needed to localise the redefinitions.

```
{%
```

If  $\langle insert \rangle$  starts with a hyphen, redefine `\glsxtrwordsep` to a hyphen.

```
\glsxtrifhyphenstart{#3}{\let\glsxtrwordsep\glsxtrwordsephyphen}{%

\newcommand*{\glsxtrlonghyphennoshortsort}{\expandonce\glsxtrorgshort}

```

**long-hyphen-noshort-noreg** It doesn't really make a great deal of sense to have a long-only style that doesn't have a description (unless no glossary is required), but the best course of action here is to use the short form as the name and the long form as the description.

```

\newabbreviationstyle{long-hyphen-noshort-noreg}{%

```

`\glsxtrshorthypenlong{\langle label \rangle}{\langle short \rangle}{\langle long \rangle}{\langle insert \rangle}`

`\glsxtrshorthypenlong`

The `\langle long \rangle` and `\langle short \rangle` arguments may be the plural form. The `\langle long \rangle` argument may also be the first letter uppercase form.

As with `\glsxtrlonghyphenshort` this doesn't fit in with the new `\glsxtrshortformat` so the inserted part has to have a separate encapsulation for the inner format.

The `\langle long \rangle` argument will need to include the inner format.

```
\newcommand*{\glsxtrshorthypenlong}[4]{%
```

Grouping is needed to localise the redefinitions.

```
{ }%
```

If `\langle insert \rangle` starts with a hyphen, redefine `\glsxtrwordsep` to a hyphen. The inserted material is also inserted into the parenthetical part. (The inserted material is grouped as a precautionary measure.)

```

### 3 Commands Specific to `bib2gls` (`glossaries-extra-bib2gls.sty`)

This package provides additional support for `bib2gls` and is automatically loaded by the `record` option.

```
\NeedsTeXFormat{LaTeX2e}
```

Rollback releases:

```
\DeclareRelease{v1.48}{2021-11-22}{glossaries-extra-bib2gls-2021-11-22.sty}
\DeclareCurrentRelease{v1.52}{2023-06-28}
```

Declare package:

```
\ProvidesPackage{glossaries-extra-bib2gls}[2023/06/28 v1.52 (NLCT)]
```

Provide convenient shortcut commands for predefined glossary types.

```
\printunsrtacronyms
  \ifglsacronym
    \providecommand*\{\printunsrtacronyms}[1][]{%
      \printunsrtglossary[type=\acronymtype,#1]}%
  \fi

\printunsrtindex
  \ifglossaryexists{index}
  {
    \providecommand*\{\printunsrtindex}[1][]{%
      \printunsrtglossary[type=index,#1]}%
  }{}

\printunsrtsymbols
  \ifglossaryexists{symbols}
  {
    \providecommand*\{\printunsrtsymbols}[1][]{%
      \printunsrtglossary[type=symbols,#1]}%
  }{}

\printunsrtnumbers
  \ifglossaryexists{numbers}

\relax
\relax
\let\@ifdefinable\@rc@ifdefinable
\newcommand#1%
}

```

`\glsxtr@wrglossarylocation{\wr-loc}{\page}`

For use with `indexcounter` and `bib2gls`. This just expands to `\wr-loc` to allow `\glsnoidxdisplayloc` to obtain the hyperlink target. The page number obtained when `bib2gls` parses the aux file.

```
\newcommand*\glsxtr@wrglossarylocation[2]{#1}
```

`\GlsXtrIndexCounterLink{\text}{\label}`

For use with `indexcounter` and `bib2gls`.

```

\ifdef\hyperref
{%
  \newcommand*\GlsXtrIndexCounterLink[2]{%
    \glsxtrifhasfield{indexcounter}{#2}%
      {\hyperref[wrglossary.\glscurrentfieldvalue]{#1}}%
      {#1}%
  }
}
{
  \newcommand*\GlsXtrIndexCounterLink[2]{#1}
}

```

`\GlsXtrDualField`

The internal field used to store the dual label. The `dual-field` defaults to `dual` if no value is supplied so that's used as the default.

```
\newcommand*\GlsXtrDualField{dual}
```

`\GlsXtrDualBackLink{\text}{\label}`

Adds a hyperlink to the dual entry.

```

\newcommand*\GlsXtrDualBackLink[2]{%
  \glsxtrifhasfield{\GlsXtrDualField}{#2}%
    {\glshyperlink[#1]{\glscurrentfieldvalue}}%
    {#1}%
}

```

\GlsXtrBibTeXEntryAliases Convenient shortcut for use with `entry-type-aliases` to alias standard BIB<sub>T</sub>E<sub>X</sub> entry types to `@bibtexentry`.

```
\newcommand*{\GlsXtrBibTeXEntryAliases}{%
    article=bibtexentry,
    book=bibtexentry,
    booklet=bibtexentry,
    conference=bibtexentry,
    inbook=bibtexentry,
    incollection=bibtexentry,
    inproceedings=bibtexentry,
    manual=bibtexentry,
    mastersthesis=bibtexentry,
    misc=bibtexentry,
    phdthesis=bibtexentry,
    proceedings=bibtexentry,
    techreport=bibtexentry,
    unpublished=bibtexentry
}
```

\GlsXtrProvideBibTeXFields Convenient shortcut to define the standard BIB<sub>T</sub>E<sub>X</sub> fields.

```
\newcommand*{\GlsXtrProvideBibTeXFields}{%
    \glsaddstoragekey{address}{}{\glsxtrbibaddress}%
    \glsaddstoragekey{author}{}{\glsxtrbibauthor}%
    \glsaddstoragekey{booktitle}{}{\glsxtrbibbooktitle}%
    \glsaddstoragekey{chapter}{}{\glsxtrbibchapter}%
    \glsaddstoragekey{edition}{}{\glsxtrbibedition}%
    \glsaddstoragekey{howpublished}{}{\glsxtrbibhowpublished}%
    \glsaddstoragekey{institution}{}{\glsxtrbibinstitution}%
    \glsaddstoragekey{journal}{}{\glsxtrbibjournal}%
    \glsaddstoragekey{month}{}{\glsxtrbibmonth}%
    \glsaddstoragekey{note}{}{\glsxtrbibnote}%
    \glsaddstoragekey{number}{}{\glsxtrbibnumber}%
    \glsaddstoragekey{organization}{}{\glsxtrbiborganization}%
    \glsaddstoragekey{pages}{}{\glsxtrbibpages}%
    \glsaddstoragekey{publisher}{}{\glsxtrbibpublisher}%
    \glsaddstoragekey{school}{}{\glsxtrbibschool}%
    \glsaddstoragekey{series}{}{\glsxtrbibseries}%
    \glsaddstoragekey{title}{}{\glsxtrbibtitle}%
    \glsaddstoragekey{bibtextype}{}{\glsxtrbibtype}%
    \glsaddstoragekey{volume}{}{\glsxtrbibvolume}%
}
```

Multiple supplementary references are only supported with `bib2gls`.

\glsxtrmultisuplocation This is like `\glsxtrsupsnumber` but the second argument is the external file name (which isn't obtained from the `externallocation` attribute). The third argument is the formatting (encap) control sequence *name*. This is ignored by default, but is set by `bib2gls` to the original encapsulation in case it's required.

```
\newcommand*{\glsxtrmultisuplocation}[3]{%
```

```

{%
  \def\glsxtrsupplocationurl{#2}%
  \glshypernumber{#1}%
}%
}

```

```
\glsxtrdisplaysupploc{\langle prefix \rangle}{\langle counter \rangle}{\langle format \rangle}{\langle src \rangle}{\langle location \rangle}
```

\glsxtrdisplaysupploc

This is like \glsnoidxdisplayloc but is used for supplementary locations and so requires an extra argument.

```

\newcommand*\glsxtrdisplaysupploc[5]{%
  \setentrycounter[#1]{#2}%
  \glsxtrmultisupplocation{#5}{#4}{#3}%
}

```

\glsxtrdisplaylocnameref \glsxtrdisplaylocnameref{\langle prefix \rangle}{\langle counter \rangle}{\langle format \rangle}{\langle location \rangle}{\langle name \rangle}{\langle href \rangle}{\langle hcounter \rangle}{\langle external file \rangle} Used with the [nameref]record package option. The *href* argument was obtained from \currentHref and the *hcounter* argument was obtained from \theHentrycounter, which is more reliable. If hyperref hasn't been loaded, this just behaves like \glsnoidxdisplayloc.

```

\ifundef\hyperlink
{
  \newcommand*\glsxtrdisplaylocnameref[8]{%
    \glsnoidxdisplayloc{#1}{#2}{#3}{#4}%
  }
}

```

Default action uses *hcounter*. Equations and pages typically don't have a title, so check the counter name (otherwise the title may be the section or chapter title, which can be confusing). As from v1.42, this now checks if the control sequence \glsxtr(*counter*)locfmt is defined. The prefix argument is redundant.

```

\newcommand*\glsxtrdisplaylocnameref[8]{%
  \def\glsxtrrecentanchor{#6}%
  \def\glsxtrlocationanchor{#2.#7}%
}

```

Initialise \glsxtractualanchor:

```

\let\glsxtractualanchor\glsxtrlocationanchor
\glsxtrsetactualanchor{#2}%
\ifcsdef{glsxtr#2locfmt}%
{\glsxtrnamereflink{#3}{\csuse{glsxtr#2locfmt}{#4}{#5}}{\glsxtractualanchor}{#8}}%
{%
  \ifstrempty{#5}%
{%
}

```

No title, so just use the location as the link text.

```

    \glsxtrnamereflink{#3}{#4}{\glsxtractualanchor}{#8}%
}%
{%
    \ifstrequal{#2}{page}%
    {\glsxtrnamereflink{#3}{#4}{\glsxtractualanchor}{#8}}%
    {\glsxtrtitlednamereflink{#3}{#4}{#5}{#8}}%
}%
}%
}
}

```

\glsxtractualanchor Does nothing by default. May be redefined to override the default.

```
\newcommand{\glsxtrsetactualanchor}[1]{}
```

```
\glsxtrtitlednamereflink{\langle format \rangle}{\langle location \rangle}{\langle title \rangle}%
{\langle file \rangle}
```

```
\newcommand{\glsxtrtitlednamereflink}[4]{%
    \glsxtrnamereflink{#1}{#2}{\glsxtrrecentanchor}{#4}}%
}
```

```
\glsxtrequestionlocfmt{\langle location \rangle}{\langle title \rangle}
```

```
\newcommand*\glsxtrequestionlocfmt[2]{(#1)}
```

```
\glsxtrwrglossarylocfmt{\langle location \rangle}{\langle title \rangle}
```

```
\newcommand*\glsxtrwrglossarylocfmt[2]{%
    {\@glsxtrwrglossycountermark{#1}}%
    \let\glsxtr@wrglossarylocation\@secondoftwo
    #1}}%
}
```

```
\glsxtrfmtnamereflink{\langle format \rangle}{\langle title \rangle}{\langle href \rangle}{\langle external
file \rangle}
```

```
\newcommand*\glsxtrnamereflink[4]{%
```

Locally change \glshypernumber to \@firstofone to remove the normal location hyperlink.

```
\begin{group}
\let\glshypernumber\@firstofone
```

If the *<external file>* argument is empty, an internal link is used, otherwise an external one is needed.

```
\ifstrempty{#4}%
{ \glsxtrfmtinternalnameref{#3}{#1}{#2}%
{ \glsxtrfmtexternalnameref{#3}{#1}{#2}{#4} }%
\endgroup
}
```

```
\glsxtrnameloclink{\langle prefix \rangle}{\langle counter \rangle}{\langle format \rangle}
{\langle location \rangle}{\langle text \rangle}{\langle external
file \rangle}
```

`\glsxtrnameloclink`

Like `\@gls@numberlink`, this creates a hyperlink to the target obtained from the prefix, counter and location but uses *(text)* as the hyperlink text. As with regular indexing, this will fail if the target name can't be formed by prefixing the location value.

```
\newcommand{\glsxtrnameloclink}[6]{%
\begin{group}
\setentrycounter{#1}{#2}%
\def\glsxtr@locationhypertext{#5}%

```

Neither glossary-tree nor glossary-longextra have been loaded. Do nothing.

```
{}%
}%
}%
}
```

`\glsxtrSetWidestFallback{\langle max depth\rangle}{\langle list\rangle}`

Used when `bib2gls` can't determine the widest name. The `\langle list\rangle` argument is a comma-separated list of glossary labels. The `\langle max depth\rangle` refers to the maximum hierarchical depth. This will either be 0 (only top-level entries) or 2 (up to two child-levels).

```
\newcommand*{\glsxtrSetWidestFallback}[2]{%
\ifnum#1=0\relax
\ifdef\glsFindWidestTopLevelName
{%
```

```

        \glsFindWidestTopLevelName[#2]%

```

Before v1.49, the last label was used as a fallback, but this doesn't make sense when the first matching label is used when entries are defined. The selection should be deferred to `bib2gls`, which means passing the list of label choices to `bib2gls`.

`\@glsxtr@dglsnomatch` No match found so record all possibilities. Requires `bib2gls` v3.0+. This will add the final insert argument but won't be able to apply any case-changing etc.

```

\def\@glsxtr@dglsnomatch#1#2[#3]{%
  \begingroup

```

This is a cut-down version of `\@glsxtr@record`. Use the fallback label in the event any hooks have to reference `\glslabel`. This is mainly to prevent an undefined control sequence error. It can't be relied on as the actual label.

```

Multi (compound/combined) entry commands used by `bib2gls`.

```
\glsxtrmultientryadjustedname{\langle list1\rangle}{\langle name\rangle}{\langle list2\rangle}
{\langle label\rangle}
```

~~\glsxtrmultientryadjustedname~~

This command is used by `bib2gls` when it adjusts the name field of an entry that's been identified as a main entry in the multi-entry set `\langle label\rangle`.

The final argument `\langle label\rangle` is the multi-entry label from which the set was obtained. The first argument `\langle list1\rangle` is the list of other labels that come before the main label. The third argument `\langle list2\rangle` is the remaining list of other labels. The `\langle name\rangle` argument is the previous name before adjustment.

```

Provide missing Greek letters for use in maths mode. These commands are recognised by `bib2gls` and will be mapped to the Mathematical Greek Italic letters. This ensures that the Greek letters that have the same shape as Latin letters are kept with the other mathematical Greek letters for sorting purposes. The L<sup>A</sup>T<sub>E</sub>X version of these commands (provided here) use an upright font for capitals and italic for lower case to provide a better match with the other Greek symbols provided by the kernel.

This package provides some basic rules, but it's not intended for complete coverage of all locales. The CLDR should provide the appropriate locale-sensitive rules. These macros are primarily to help construct custom rules to include, for example, Greek maths symbols mixed with Latin. For the full rule syntax, see the Java API for [RuleBaseCollator](#)

If you want to provide a rule-block for a particular locale to allow for customization within that locale, create a file called `glossariesxtr-<tag>.ldf` (where `<tag>` identifies the locale) and add similar commands. See the description of `\IfTrackedLanguageFileExists` in the `tracklang` manual for the allowed forms of `<tag>`. The simplest is to just use the root language label or ISO code. The file will then be automatically loaded by `glossaries-extra` if the document has support for that language.

When combining these blocks of rules, remember to separate them with the appropriate character. For example:

```

%sort-rule={\glsxtrcontrolrules
% ;\glsxtrspacerules
% ;\glsxtrnonprintablerules
% ;\glsxtrcombiningdiacriticrules
% ;\glsxtrhyphenrules
% <\glsxtrgeneralpuncrules
% <\glsxtrdigitrules
% <\glsxtrfractionrules
% <\glsxtrGeneralLatinIVrules
% <\glsxtrMathItalicGreekIrules
%}
%
```

`\glsxtrIgnorableRules` A shortcut command for common ignorable characters.

```

\newcommand{\glsxtrIgnorableRules}{%
\glsxtrcontrolrules
\string;\glsxtrspacerules
\string;\glsxtrnonprintablerules
}
```

`\glsxtrGeneralInitRules` A shortcut command for common initial rules for ignorables, diacritics, punctuation and digits.

```

\newcommand{\glsxtrGeneralInitRules}{%
\glsxtrIgnorableRules
```

```

\string;\glsxtrcombiningdiacriticrules
\string;\glsxtrhyphenrules
\string<\glsxtrgeneralpuncrules
\string<\glsxtrdigirules
\string<\glsxtrfractionrules
}

```

**\glsxtrcontrolrules** These are control characters that are usually placed at the start of a rule in the ‘ignored characters’ section. These control characters are unlikely to appear in any entry fields but are provided for completeness. `\string` is used for punctuation characters in case they’ve been made active.

```

    \string<\glshex 215E% seven eighths (7/8 = 0.875)
}

\@glsxtrdialecthook Check for scripts associated with the document dialects.

\renewcommand{\@glsxtrdialecthook}{%
    \ifundef\CurrentTrackedScript
    {%
        \TrackLangIfHasDefaultScript{\CurrentTrackedLanguage}%
    }%
    \edef\CurrentTrackedScript{%
        \TrackLangGetDefaultScript\CurrentTrackedLanguage}%
    }%
    {}%
}%
\{}%
\ifdef\CurrentTrackedScript
{%
    \let\gls@orgTrackLangRequireDialectPrefix\TrackLangRequireDialectPrefix
    \def\TrackLangRequireDialectPrefix{glossariesxtr-}%
    \let\CurrentTrackedTag\CurrentTrackedScript
}

```

```

\IfFileExists{\TrackLangRequireDialectPrefix\CurrentTrackedTag.ldf}
{ \RequireGlossariesExtraLang{\CurrentTrackedTag} }%
{ }%
\let\TrackLangRequireDialectPrefix\gls@orgTrackLangRequireDialectPrefix
}%
{ }%
}

```

If `\glsxtr@loaddialect` has been defined, then `glossaries-extra-bib2gls` has been loaded after `glossaries-extra`. (For example, through `\glossariesextrasetup`.) Not recommended, but if this has been done try to find the associated language resources.

```

\ifdef\glsxtr@loaddialect
{%
  \@ifpackageloaded{tracklang}
  {%
    \AnyTrackedLanguages
    {%
      \ForEachTrackedDialect{\this@dialect}{\glsxtr@loaddialect}%
    }%
    { }%
  }
  { }%
}
{ }

```

## 4 Style Adjustments (`glossaries-extra-stylemods.sty`)

This package adjusts the predefined styles so that they include the post description hook. Also, some other minor adjustments may be made to make existing styles more flexible.

### 4.1 Package Initialisation

First identify package:

```
\NeedsTeXFormat{LaTeX2e}
```

Rollback releases:

```
\DeclareRelease{v1.48}{2021-11-22}{glossaries-extra-stylemods-2021-11-22.sty}
\DeclareCurrentRelease{v1.52}{2023-06-28}
```

Declare package:

```
\ProvidesPackage{glossaries-extra-stylemods}[2023/06/28 v1.52 (NLCT)]
```

Provide package options to automatically load required predefined styles. The simplest method is to just test for the existence of the file `glossary-<option>.sty`. Packages can't be loaded whilst the options are being processed, so save the list in `\glsxtr@loadstyles`.

```

\@glsxtr@loadstyles
\newcommand*\{@glsxtr@loadstyles}{}

all Provide all known styles.

\DeclareOption{all}{%
  \appto\@glsxtr@loadstyles{%
    \RequirePackage{glossary-inline}%
    \RequirePackage{glossary-list}%
    \RequirePackage{glossary-tree}%
    \RequirePackage{glossary-mcols}%
    \RequirePackage{glossary-long}%
    \RequirePackage{glossary-longragged}%
    \RequirePackage{glossary-longbooktabs}%
    \RequirePackage{glossary-super}%
    \RequirePackage{glossary-superragged}%
    \RequirePackage{glossary-bookindex}%
    \RequirePackage{glossary-longextra}%
    \RequirePackage{glossary-topic}%
    \RequirePackage{glossary-table}%
  }
}

\DeclareOption*{%
  \IfFileExists{glossary-\CurrentOption.sty}
  {\eappto\@glsxtr@loadstyles{%
    \noexpand\RequirePackage{glossary-\CurrentOption}}%
  }%
  {%
    \PackageError{glossaries-extra-styles}%
    {Unknown option '\CurrentOption'}{}%
  }%
}

```

Process the package options:

```
\ProcessOptions
```

Load the required packages:

```
\@glsxtr@loadstyles
```

Adjust the styles so that they all have the post description hook. Also, instead of having a hard-coded `\space` before the location, use:

`\glsxtrprelocation` This uses `\providemode` as the same command is also provided by `glossary-bookindex`.

```
\providemode*\{@glsxtrprelocation}{\space}
```

In case we have an old version of `glossaries`:

```
\renewglossarystyle
\providemode{\renewglossarystyle}[2]{%
  \ifcsundef{@glsstyle@#1}{%
```

```

{%
  \PackageError{glossaries-extra}{Glossary style '#1' isn't already defined}{}
}%
{%
  \csdef{@glsstyle@#1}{#2}%
}%
}

```

## 4.2 List-Like Styles

The list-like styles mostly already use the post description hook. Only the `listdotted` style need modifying to add this.

```

\ifdef{@glsstyle@listdotted}
{%
  \renewglossarystyle[listdotted]{%
    \setglossarystyle[list]{%
      \renewcommand*{\glossentry}[2]{%
        \item[]\makebox[\glstotalwidth][1]{%
          \glossentryitem{##1}%
          \glstarget{##1}{\glossentryname{##1}}%
          \unskip\leaders\hbox to 2.9mm{\hss}\hfill\strut}%
          \glossentrydesc{##1}\glspostdescription}%
      \renewcommand*{\subglossentry}[3]{%
        \item[]\makebox[\glstotalwidth][1]{%
          \glssubentryitem{##2}%
          \glstarget{##2}{\glossentryname{##2}}%
          \unskip\leaders\hbox to 2.9mm{\hss}\hfill\strut}%
          \glossentrydesc{##2}\glspostdescription}%
    }%
  }%
}%

```

Assume the style isn't required if it hasn't already been defined.

```
}
```

The `sublistdotted` style doesn't display the description for top-level entries. Sub-level entries use the `listdottedstyle`.

The other list styles would be easier to adapt if the space before the number list wasn't hard coded.

```

\ifdef{@glsstyle@list}
{%

```

`\glslistprelocation` Space before number list for top-level entries.

```
  \newcommand{\glslistprelocation}{\glsxtrprelocation}
```

`\glslistchildprelocation` Space before number list for child entries.

```
  \newcommand{\glslistchildprelocation}{\glslistprelocation}
```

`\glslistchildpostlocation` Full stop after number list.

```
  \newcommand{\glslistchildpostlocation}{.}
```

```

\glslistdesc
    \newcommand{\glslistdesc}[1]{\glossentrydesc{#1}\glspostdescription}

\glslistgroupskip
    \newcommand{\glslistgroupskip}{\nobreak\indexspace\nobreak}

\glslistitem
    \newcommand{\glslistitem}[1]{%
        \item[\glsentryitem{#1}%
            \glstarget{#1}{\glossentryname{#1}}]%
    }

```

\glslistinit This command was only added to glossary-list v4.48 so provide it if it hasn't been defined:

```

\providecommand{\glslistinit}{%
    \ifdef{\GetTitleStringDisableCommands}{%
        \GetTitleStringSetup{expand}%
        \GetTitleStringDisableCommands{%
            \let{\glsentryitem}{\gobble}%
            \let{\glstarget}{\secondoftwo}%
            \let{\glossentryname}{\glslistexpandedname}%
            \let{\glslistgroupheaderfmt}{\firstofone}%
            \let{\glsgetgroupitle}{\firstofone}%
        }%
    }%
    {}%
}

```

Technically this has an optional argument but it's not used in the list styles.

```

    \let{\glsnavhypertarget}{\secondoftwo}%
    \let{\glsnavigation}{\relax}%
}%
}%
{}%
}

```

\glslistexpandedname This command was only added to glossary-list v4.48 so provide it if it hasn't been defined. The original definition uses \glsunexpandedfieldvalue which was added to glossaries v4.48 (so if \glslistexpandedname hasn't been defined then neither will \glsunexpandedfieldvalue).

```

\providecommand{\glslistexpandedname}[1]{%
    \ifcsname glo@\glsdetoklabel{#1}@name\endcsname{%
        \expandafter\expandonce\csname glo@\glsdetoklabel{#1}@name\expandafter\endcsname{%
            \fi
    }%
}

```

Redefine list to use these commands.

```

\renewglossarystyle{list}{%
    \renewenvironment{theglossary}{%
        {\glslistinit\begin{description}}{\end{description}}%
    }%
    \renewcommand*{\glossaryheader}{\glslistgroupheading[1]}%
}

```

Sub-groups are only supported with `\printunsrtglossary`. This does nothing as the sub-entries don't have the name displayed for the list styles.

```
\renewcommand*{\glssubgroupheading}[4]{%
\renewcommand*{\glossentry}[2]{%
  \glslistitem{##1}\glslistdesc{##1}\glslistprelocation ##2}%
\renewcommand*{\subglossentry}[3]{%
  \glssubentryitem{##2}%
  \glstarget{##2}{\strut}\space
  \glslistdesc{##2}%
  \glslistchildprelocation ##3\glslistchildpostlocation}%
\renewcommand*{\glsgroupskip}{\ifglsnogroupskip\else\glslistgroupskip\fi}%
}
}
{}
```

Similarly for `altlist`. Since it requires `list`, the new commands should have been defined above.

```
\ifdef{@glsstyle@altlist}
{%
\glsaltlistitem
  \newcommand{\glsaltlistitem}[1]{%
    \glslistitem{#1}%
    \mbox{}\par\nobreak\@afterheading
  }
  \renewglossarystyle{altlist}{%
    \setglossarystyle{list}%
    \renewcommand*{\glossentry}[2]{%
      \glsaltlistitem{##1}%
      \glslistdesc{##1}\glslistprelocation ##2}%
    \renewcommand*{\subglossentry}[3]{%
      \par
      \glssubentryitem{##2}%
      \glstarget{##2}{\strut}\glslistdesc{##2}%
      \glslistchildprelocation ##3}%
  }
}
{}
```

Redefine `listgroup` so that it discourages a break after group headings.

```
\ifdef{@glsstyle@listgroup}
{%
\glslistgroupheaderitem
  \newcommand{\glslistgroupheaderitem}[2]{\item[{#2}]}%
\glslistgroupafterheader
  \newcommand{\glslistgroupafterheader}{%
    \mbox{}\par\nobreak\@afterheading
  }
```

```

\renewglossarystyle{listgroup}{%
  \setglossarystyle{list}{%
    \renewcommand*{\glsgroupheading}[1]{%
      \glslistgroupheaderitem{##1}{\glslistgroupheaderfmt{\glsgetgroupname{##1}}}{%
        \glslistgroupafterheader
      }%
    }%
  }
}
{}%

```

Similarly for `listhypergroup`.

```

\ifdef{@glsstyle@listhypergroup}
{%
  \renewglossarystyle{listhypergroup}{%
    \setglossarystyle{list}{%
      \renewcommand*{\glossaryheader}{%
        \glslistnavigationitem{\glsnavigation}{%
          \renewcommand*{\glsgroupheading}[1]{%
            \glslistgroupheaderitem{##1}{\glslistgroupheaderfmt{%

                \glslistgroupafterheader
              }%
            }%
          }%
        }
      }
    }
}
{}%

```

Similarly for `altlistgroup`.

```

\ifdef{@glsstyle@altlistgroup}
{%
  \renewglossarystyle{altlistgroup}{%
    \setglossarystyle{altlist}{%
      \renewcommand*{\glsgroupheading}[1]{%
        \glslistgroupheaderitem{##1}{%
          \glslistgroupheaderfmt{\glsgetgroupname{##1}}}{%
            \glslistgroupafterheader
          }%
        }%
      }
    }
}
{}%

```

Similarly for `altlisthypergroup`.

```

\ifdef{@glsstyle@altlisthypergroup}
{%
  \renewglossarystyle{altlisthypergroup}{%
    \setglossarystyle{altlist}{%
      \renewcommand*{\glossaryheader}{%
        \glslistnavigationitem{\glsnavigation}{%
          \renewcommand*{\glsgroupheading}[1]{%
            \glslistgroupheaderitem{##1}{\glslistgroupheaderfmt{%
              \glsnavhypertarget{##1}{\glsgetgroupname{##1}}}{%
                \glslistgroupafterheader
              }%
            }%
          }%
        }
      }
    }
}
{}%

```

```

}%
}
}
{}
```

### 4.3 Longtable Styles

The three and four column styles require adjustment to add the post-description hook. The two column styles need the hard-coded `\space` changed to `\glsxtrprelocation`.

```

\ifcsdef{@glsstyle@long}
{%
    \renewglossarystyle{long}{%
        \renewenvironment{theglossary}{%
            {\begin{longtable}{lp{\glsdescwidth}}}}{%
            {\end{longtable}}}}%
        \renewcommand*{\glossaryheader}{}%
        \renewcommand*{\glsgroupheading}[1]{}%
    }%
```

Sub-groups are only supported with `\printunsrtglossary`. This does nothing as the sub-entries don't have the name displayed for the long styles.

```

\renewcommand*{\glssubgroupheading}[4]{}%
\renewcommand{\glossentry}[2]{%
    \glsentryitem{##1}\glisttarget{##1}{\glossentryname{##1}} &
    \glossentrydesc{##1}\glistpostdescription
    \glsxtrprelocation ##2\tabularnewline
}%
\renewcommand{\subglossentry}[3]{%
    &
    \glssubentryitem{##2}%
    \glisttarget{##2}{\strut}\glossentrydesc{##2}\glistpostdescription
    \glsxtrprelocation ##3\tabularnewline
}%
\ifglsnogroupskip
    \renewcommand*{\glsgroupskip}{}%
\else
    \renewcommand*{\glsgroupskip}{ & \tabularnewline}%
\fi
}
{}
```

Three column style:

```

\ifcsdef{@glsstyle@long3col}
{%
    \renewglossarystyle{long3col}{%
        \renewenvironment{theglossary}{%
            {\begin{longtable}{lp{\glsdescwidth}p{\glspagelistwidth}}}}{%
            {\end{longtable}}}}%
        \renewcommand*{\glossaryheader}{}%
```

```
\renewcommand*{\glsgroupheading}[1]{}
```

Sub-groups are only supported with `\printunsrtglossary`. This does nothing as the sub-entries don't have the name displayed for the long styles.

```
\renewcommand*{\glssubgroupheading}[4]{}
\renewcommand{\glossentry}[2]{%
  \glsentryitem{##1}\glstarget{##1}{\glossentryname{##1}} &
  \glossentrydesc{##1}\glspostdescription & ##2\tabularnewline
}%
\renewcommand{\subglossentry}[3]{%
  &
  \glssubentryitem{##2}%
  \glstarget{##2}{\strut}\glossentrydesc{##2}\glspostdescription &
  ##3\tabularnewline
}%
```

Conditional needs to be outside of `\glsgroupskip` otherwise it can cause “Incomplete `\iftrue`” errors.

```
\ifglsnogroupskip
  \renewcommand*{\glsgroupskip}{}%
\else
  \renewcommand*{\glsgroupskip}{\& \tabularnewline}%
\fi
}
}
```

Four column style:

```
\ifcsdef{@glsstyle@long4col}
{%
  \renewglossarystyle{long4col}{%
    \renewenvironment{theglossary}{%
      {\begin{longtable}{llll}}%
    }%
    {\end{longtable}}%
  }%
  \renewcommand*{\glossaryheader}{}%
  \renewcommand*{\glsgroupheading}[1]{}%
```

Sub-groups are only supported with `\printunsrtglossary`. This does nothing as the sub-entries don't have the name displayed for the long styles.

```
\renewcommand*{\glssubgroupheading}[4]{}
\renewcommand{\glossentry}[2]{%
  \glsentryitem{##1}\glstarget{##1}{\glossentryname{##1}} &
  \glossentrydesc{##1}\glspostdescription &
  \glossentrysymbol{##1} &
  ##2\tabularnewline
}%
\renewcommand{\subglossentry}[3]{%
  &
  \glssubentryitem{##2}%
  \glstarget{##2}{\strut}\glossentrydesc{##2}\glspostdescription &
  \glossentrysymbol{##2} & ##3\tabularnewline
}
```

```

}%

\ifglsnogroupskip
  \renewcommand*\glsgroupskip{}%
\else
  \renewcommand*\glsgroupskip{\& & \tabularnewline}%
\fi
}
}
{}
```

The styles in `glossary-longbooktabs` are all based on the styles in `glossary-long`, so no adjustments are needed for that package.

#### 4.4 Long Ragged Styles

The three and four column styles require adjustment for the post-description hook, but not the two column styles. However, the two-column styles need to have `\space` replaced with `\glsxtrprelocation`.

```

\ifcsdef{@glsstyle@longragged}
{%
  \renewglossarystyle{longragged}{%
    \renewenvironment{theglossary}{%
      \begin{longtable}{l>{\raggedright\p{\glsdescwidth}}}}
      \end{longtable}%
    \renewcommand*\glossaryheader{}%
    \renewcommand*\glsgroupheading[1]{}%
}
```

Sub-groups are only supported with `\printunsrtglossary`. This does nothing as the sub-entries don't have the name displayed for the longragged styles.

```

\renewcommand*\glssubgroupheading[4]{%
  \renewcommand{\glossentry}[2]{%
    \glsentryitem{##1}\glstarget{##1}\glossentryname{##1} &
    \glossentrydesc{##1}\glspostdescription\glsxtrprelocation ##2%
    \tabularnewline
  }%
  \renewcommand{\subglossentry}[3]{%
    &
    \glssubentryitem{##2}%
    \glstarget{##2}\strut\glossentrydesc{##2}%
    \glspostdescription\glsxtrprelocation ##3%
    \tabularnewline
  }%
  \ifglsnogroupskip
    \renewcommand*\glsgroupskip{}%
  \else
    \renewcommand*\glsgroupskip{\& \tabularnewline}%
  \fi
}
```

```
{}
```

Three and four column styles don't use `\glsxtrprelocation` since the number list is in its own column.

```
\ifcsdef{@glsstyle@longragged3col}
{%
  \renewglossarystyle{longragged3col}{%
    \renewenvironment{theglossary}{%
      \begin{longtable}{l>{\raggedright}p{\glsdescwidth}%
        >{\raggedright}p{\glspagelistwidth}}{%
        \end{longtable}}{%
      \renewcommand*\glossaryheader{}{%
        \renewcommand*\glsgroupheading}[1]{}}{}}{}}
```

Sub-groups are only supported with `\printunsrtglossary`. This does nothing as the sub-entries don't have the name displayed for the longragged styles.

```
\renewcommand*\glssubgroupheading}[4]{}}{%
\renewcommand*\glossentry}[2]{%
  \glsentryitem{##1}\glstarget{##1}{\glossentryname{##1}} &
  \glossentrydesc{##1}\glspostdescription & ##2\tabularnewline
}{%
\renewcommand*\subglossentry}[3]{%
  &
  \glssubentryitem{##2}{%
    \glstarget{##2}{\strut}\glossentrydesc{##2}\glspostdescription &
    ##3\tabularnewline
}{%
\ifglsnogroupskip
  \renewcommand*\glsgroupskip{}{%
\else
  \renewcommand*\glsgroupskip}{\& \tabularnewline}{%
\fi
}
}
{}}
```

Four column style:

```
\ifcsdef{@glsstyle@altlongragged4col}
{%
  \renewglossarystyle{altlongragged4col}{%
    \renewenvironment{theglossary}{%
      \begin{longtable}{l>{\raggedright}p{\glsdescwidth}l>{\raggedright}p{\glspagelistwidth}}{%
        \end{longtable}}{%
      \renewcommand*\glossaryheader{}{%
        \renewcommand*\glsgroupheading}[1]{}}{}}{}}
```

Sub-groups are only supported with `\printunsrtglossary`. This does nothing as the sub-entries don't have the name displayed for the longragged styles.

```
\renewcommand*\glssubgroupheading}[4]{}}{%
```

```

\renewcommand{\glossentry}[2]{%
  \glsentryitem{##1}\glstarget{##1}{\glossentryname{##1}} &
  \glossentrydesc{##1}\glspostdescription & \glossentrysymbol{##1} &
  ##2\tabularnewline
}%
\renewcommand{\subglossentry}[3]{%
  &
  \glssubentryitem{##2}%
  \glstarget{##2}{\strut}\glossentrydesc{##2}\glspostdescription &
  \glossentrysymbol{##2} & ##3\tabularnewline
}%
\ifglsnogroupskip
  \renewcommand*{\glsgroupskip}{}%
\else
  \renewcommand*{\glsgroupskip}{\& \& \&\tabularnewline}%
\fi
}
}%
{%
}

```

## 4.5 Supertabular Styles

The three and four column styles require adjustment to add the post-description hook. The two column styles need the hard-coded `\space` changed to `\glsxtrprelocation`.

```

\ifcsdef{@glsstyle@super}
{%
  \renewglossarystyle{super}{%
    \renewenvironment{theglossary}{%
      {\tablehead{}\tabletail{}%
        \begin{supertabular}{lp{\glsdescwidth}}}}%
      {\end{supertabular}}%
    \renewcommand*{\glossaryheader}{}%
    \renewcommand*{\glsgroupheading}[1]{}%
  }
}
```

Sub-groups are only supported with `\printunsrtglossary`. This does nothing as the sub-entries don't have the name displayed for the super styles.

```

\renewcommand*{\glssubgroupheading}[4]{}%
\renewcommand{\glossentry}[2]{%
  \glsentryitem{##1}\glstarget{##1}{\glossentryname{##1}} &
  \glossentrydesc{##1}\glspostdescription
  \glsxtrprelocation ##2\tabularnewline
}%
\renewcommand{\subglossentry}[3]{%
  &
  \glssubentryitem{##2}%
  \glstarget{##2}{\strut}\glossentrydesc{##2}\glspostdescription
  \glsxtrprelocation ##3\tabularnewline
}%

```

```

\ifglsnogroupskip
  \renewcommand*\glsgroupskip{}%
\else
  \renewcommand*\glsgroupskip{\& \tabularnewline}%
\fi
}
}
{}

```

Three column style:

```

\ifcsdef{@glsstyle@super3col}
{%
  \renewglossarystyle{super3col}{%
    \renewenvironment{theglossary}{%
      {\tablehead{}\tabletail{}%
       \begin{supertabular}{lp{\glscdescwidth}p{\glspagelistwidth}}{}}%
      {\end{supertabular}}{}}%
    \renewcommand*\glossaryheader{}%
    \renewcommand*\glsgroupheading[1]{}%
  }
}
```

Sub-groups are only supported with `\printunsrtglossary`. This does nothing as the sub-entries don't have the name displayed for the super styles.

```

\renewcommand*\glssubgroupheading[4]{}%
\renewcommand{\glossentry}[2]{%
  \glsentryitem{##1}\glstarget{##1}{\glossentryname{##1}} &
  \glossentrydesc{##1}\glspostdescription & ##2\tabularnewline
}%
\renewcommand{\subglossentry}[3]{%
  &
  \glssubentryitem{##2}%
  \glstarget{##2}{\strut}\glossentrydesc{##2}\glspostdescription &
  ##3\tabularnewline
}%
\ifglsnogroupskip
  \renewcommand*\glsgroupskip{}%
\else
  \renewcommand*\glsgroupskip{\& \&\tabularnewline}%
\fi
}
}
{}
```

Four column styles:

```

\ifcsdef{@glsstyle@super4col}
{%
  \renewglossarystyle{super4col}{%
    \renewenvironment{theglossary}{%
      {\tablehead{}\tabletail{}%
       \begin{supertabular}{llll}{}}%
      {\end{supertabular}}{}}%
    \renewcommand*\glossaryheader{}%
    \renewcommand*\glsgroupheading[1]{}%
  }
}
```

```

\renewcommand*{\glossaryheader}{}%
\renewcommand*{\glsgroupheading}[1]{}%
\renewcommand*{\glssubgroupheading}[4]{}%
\renewcommand{\glossentry}[2]{}%
\glsentryitem{##1}\glstarget{##1}{\glossentryname{##1}} &
\glossentrydesc{##1}\glspostdescription &
\glossentrysymbol{##1} & ##2\tabularnewline
}%
\renewcommand{\subglossentry}[3]{}%
&
\glssubentryitem{##2}%
\glstarget{##2}{\strut}\glossentrydesc{##2}\glspostdescription &
\glossentrysymbol{##2} & ##3\tabularnewline
}%
\ifglsnogroupskip
\renewcommand*{\glsgroupskip}{}%
\else
\renewcommand*{\glsgroupskip}{\& \& \&\tabularnewline}%
\fi
}
}
{%
}

```

## 4.6 Super Ragged Styles

The three and four column styles require adjustment for the post-description hook, but not the two column styles. However, the two-column styles need to have `\space` replaced with `\glsxtrprelocation`.

```

\ifcsdef{@glsstyle@superragged}
{%
\renewglossarystyle{superragged}{}%
\renewenvironment{theglossary}%
{\tablehead{}\tabletail{}%
\begin{supertabular}{l>{\raggedright}p{\glsdescwidth}}{}%
\end{supertabular}}%
\renewcommand*{\glossaryheader}{}%
\renewcommand*{\glsgroupheading}[1]{}%

```

Sub-groups are only supported with `\printunsrtglossary`. This does nothing as the sub-entries don't have the name displayed for the super styles.

```

\renewcommand*{\glssubgroupheading}[4]{}%
\renewcommand{\glossentry}[2]{}%
\glsentryitem{##1}\glstarget{##1}{\glossentryname{##1}} &
\glossentrydesc{##1}\glspostdescription\glsxtrprelocation ##2%
\tabularnewline
}%

```

```

\renewcommand{\subglossentry}[3]{%
  &
  \glssubentryitem{##2}%
  \glstarget{##2}{\strut}\glossentrydesc{##2}\glspostdescription
  \glsxtrprelocation ##3%
  \tabularnewline
}%
\ifglsnogroupskip
  \renewcommand*\glsgroupskip{}%
\else
  \renewcommand*\glsgroupskip{\& \tabularnewline}%
\fi
}
}
{}

```

Three column style:

```

\ifcsdef{@glsstyle@superragged3col}
{%
  \renewglossarystyle{superragged3col}{%
    \renewenvironment{theglossary}{%
      {\tablehead{}\tabletail{}%
        \begin{supertabular}{l>{\raggedright}p{\glsdescwidth}%
          >{\raggedright}p{\glspagelistwidth}}}}%
      {\end{supertabular}}%
    \renewcommand*\glossaryheader{}%
    \renewcommand*\glsgroupheading[1]{}%
  }
}
```

Sub-groups are only supported with `\printunsrtglossary`. This does nothing as the sub-entries don't have the name displayed for the super styles.

```

\renewcommand*\glossgroupheading[4]{}%
\renewcommand{\glossentry}[2]{%
  \glsentryitem{##1}\glstarget{##1}{\glossentryname{##1}} &
  \glossentrydesc{##1}\glspostdescription &
  ##2\tabularnewline
}%
\renewcommand{\subglossentry}[3]{%
  &
  \glssubentryitem{##2}%
  \glstarget{##2}{\strut}\glossentrydesc{##2}\glspostdescription &
  ##3\tabularnewline
}%
\ifglsnogroupskip
  \renewcommand*\glsgroupskip{}%
\else
  \renewcommand*\glsgroupskip{\& \tabularnewline}%
\fi
}
}

```

Four columns:

```
\ifcsdef{@glsstyle@altsuperragged4col}
{%
  \renewglossarystyle{altsuperragged4col}{%
    \renewenvironment{theglossary}{%
      {\tablehead{}}{\tail{}{}}%
      \begin{supertabular}{l>{\raggedright}p{\glsdescwidth}l>{\raggedright}p{\glspagelistwidth}}{%
        {\end{supertabular}}{%
          \renewcommand*{\glossaryheader}{%
            \glsentryitem{##1}\glstarget{##1}{\glossentryname{##1}} &
            \glossentrydesc{##1}\glspostdescription &
            \glossentrysymbol{##1} & ##2\tabularnewline
          }{%
            \renewcommand{\subglossentry}[3]{%
              &
              \glssubentryitem{##2}{%
                \glstarget{##2}{\strut}\glossentrydesc{##2}\glspostdescription &
                \glossentrysymbol{##2} & ##3\tabularnewline
              }{%
                \ifglsnogroupskip
                  \renewcommand*{\glsgroupskip}{%
                \else
                  \renewcommand*{\glsgroupskip}{\& \&\tabularnewline}%
                \fi
              }{%
            }{%
          }{%
        }{%
      }{%
    }{%
  }{%
}
```

## 4.7 Inline Style

The inline style is dealt with slightly differently. The `\glspostdescription` hook is actually in `\glspostinline`, which is called at the end of the glossary. The original definition of `\glspostinline` also includes a space, which is unnecessary. Here, instead of redefining the inline style, just redefine `\glspostinline` and `\glsinlinedescformat`.

```
\ifdef{@glsstyle@inline}
{%
  \renewcommand*{\glspostinline}{.\spacefactor\sfcode'`}}
```

Just use `\glsxtrpostdescription` instead of `\glspostdescription`.

```
\renewcommand*{\glsinlinedescformat}[3]{%
  \space#1\glsxtrpostdescription}
\renewcommand*{\glsinlinesubdescformat}[3]{%
  #1\glsxtrpostdescription}
```

The default settings don't show the location lists, so there's no adjustment for `\glsxtrprelocation`.

```
}
```

```
{}
```

## 4.8 Tree Styles

Redefine both `\glstreenamefmt` and `\glstreegroupheaderfmt` in terms of `\glstreedefaultnamefmt` to make it easier to change both at the same time or only change one without affecting the other.

```
\ifdef\glstreenamefmt
{
```

```
\glstreedefaultnamefmt
    \newcommand{\glstreedefaultnamefmt}[1]{\textbf{#1}}
```

```
\glstreenamefmt
    \renewcommand{\glstreenamefmt}[1]{\glstreedefaultnamefmt{#1}}
```

`\glstreegroupheaderfmt` This command was only introduced to `glossary-tree` v4.22, so it may not be defined.

```
\def\glstreegroupheaderfmt#1{\glstreedefaultnamefmt{#1}}
```

`\glstreenavigationfmt` This command was only introduced to `glossary-tree` v4.22, so it may not be defined.

```
\def\glstreenavigationfmt#1{\glstreedefaultnamefmt{#1}}
```

`\glstreePreHeader` Takes the label as the first argument and title as the second argument so this can be modified to add a bookmark.

```
\newcommand{\glstreePreHeader}[2]{}
```

```
\glstreeSubPreHeader{\langle previous group level \rangle}{\langle level \rangle}
{\langle parent label \rangle}{\langle group label \rangle}{\langle title \rangle}
```

```
\glstreeSubPreHeader
```

```
\newcommand{\glstreeSubPreHeader}[5]{}
```

```
}
```

```
{}
```

The `index` style is redefined so that the space before the number list isn't hard coded.

```
\ifdef{@glsstyle@index}

\RequirePackage{glossary-tree}

\glsxtrbookindexcols Number of columns.
\newcommand{\glsxtrbookindexcols}{2}

\glsxtrbookindexname Format used for top-level entries. (Argument is the label.)
\newcommand*{\glsxtrbookindexname}[1]{\glossentryname{#1}}

\glsxtrbookindexsubname Format used for sub entries.
\newcommand*{\glsxtrbookindexsubname}[1]{\glsxtrbookindexname{#1}>

\glsxtrprelocation Provide in case glossaries-stylemods isn't loaded.
\providecommand*{\glsxtrprelocation}{\space}

\glsxtrbookindexprelocation Separator used before location list for top-level entries. Version 1.22 has removed
the \ifglsnopostrdot check since this style doesn't display the description.
\newcommand*{\glsxtrbookindexprelocation}[1]{%
\glsxtrifhasfield{location}{#1}%
{,\glsxtrprelocation}%
{\glsxtrprelocation}%
}
```

```

sxtrbookindexsubprelocation Separator used before location list for sub-entries.
\newcommand*{\glsxtrbookindexsubprelocation}[1]{%
  \glsxtrbookindexprelocation{#1}%
}

\glsxtrbookindexlocation
\glsxtrbookindexlocation{\label}{\location}
Displays the location.
\newcommand*{\glsxtrbookindexlocation}[2]{#2}

\glsxtrbookindexsublocation
\glsxtrbookindexsublocation{\label}{\location}
Displays the location for sub-entries.
\newcommand*{\glsxtrbookindexsublocation}{\glsxtrbookindexlocation}

sxtrbookindexparentchildsep Separator used between top-level parent and child entry.
\newcommand{\glsxtrbookindexparentchildsep}{\nopagebreak}

rbookindexparentsubchildsep Separator used between sub-level parent and child entry.
\newcommand{\glsxtrbookindexparentsubchildsep}{\glsxtrbookindexparentchildsep}

\glsxtrbookindexbetween Between two top-level entries identified by the labels in the arguments.
\newcommand{\glsxtrbookindexbetween}[2]{}

\glsxtrbookindexsubbetween Between two level 1 entries identified by the labels in the arguments.
\newcommand{\glsxtrbookindexsubbetween}[2]{}

\glsxtrbookindexsubsubbetween Between two level 2 entries identified by the labels in the arguments.
\newcommand{\glsxtrbookindexsubsubbetween}[2]{}

\glsxtrbookindexatendgroup At the end of a letter group. The argument is the label of the last top-level entry.
\newcommand{\glsxtrbookindexatendgroup}[1]{}

\glsxtrbookindexsubatendgroup At the end of a letter group. The argument is the label of the last level 1 entry.
\newcommand{\glsxtrbookindexsubatendgroup}[1]{}

trbookindexsubsubatendgroup At the end of a letter group. The argument is the label of the last level 2 entry.
\newcommand{\glsxtrbookindexsubsubatendgroup}[1]{}

\glsxtrbookindexgroupskip Group separator.
\newcommand{\glsxtrbookindexgroupskip}{\ifglsnogroupskip\else\indexspace\fi}

```

`\glsxtrbookindexpregroupskip` After group header. The argument is the skip that would normally be inserted if there wasn't a group header.

```
\newcommand{\glsxtrbookindexpregroupskip}[1]{#1}
```

`\glsxtrbookindexpostgroupskip` After group header.

```
\newcommand{\glsxtrbookindexpostgroupskip}{\indexspace}
```

```
\glsxtrbookindexpresubgroupskip{<default>}{<prev group level>}{<group level>}
```

Before sub-group separator. The first argument is the skip that would normally be used at this point if there wasn't a header.

```

Some supplementary commands that may be useful. These store the entry label for the current page. Since the page number is needed in the control sequence, this uses `\glsxtrbookindexthepage` instead of `\thepage` in case the page numbering has been set to something that contains formatting commands.

`\glsxtrbookindexthepage` The `\@printglossary` sets `\currentglossary` to the current glossary label. This is used as a prefix in case the page number is reset.

```
\newcommand{\glsxtrbookindexthepage}{%
\ifdef{\currentglossary}{\currentglossary.\arabic{page}}{\arabic{page}}%
}
```

`\glsxtrbookindexmarkentry` Writes entry information to the `.aux` file. The argument is the entry label.

```
\newcommand*{\glsxtrbookindexmarkentry}[1]{%
\protected@write\auxout{%

## 6 longextra styles (`glossary-longextra.sty`)

Provides additional long styles.

```
\NeedsTeXFormat{LaTeX2e}
```

Rollback releases:

```
\DeclareRelease{v1.48}{2021-11-22}{glossary-longextra-2021-11-22.sty}
\DeclareCurrentRelease{v1.52}{2023-06-28}
```

Declare package:

```
\ProvidesPackage{glossary-longextra}[2023/06/28 v1.52 (NLCT)]
```

Load required packages.

```
\RequirePackage{glossary-longbooktabs}
```

```
\glslongextraNameFmt{\langle label \rangle}
```

```
\glslongextraNameFmt
```

Governs the way the name is displayed.

```
\newcommand{\glslongextraNameFmt}[1]{%
    \glsentryitem{#1}\glstarget{#1}{\glossentryname{#1}}%
}
```

```
\glslongextraDescFmt{\langle label \rangle}
```

```
\glslongextraDescFmt
```

Governs the way the description is displayed.

```
\newcommand{\glslongextraDescFmt}[1]{%
    \glossentrydesc{#1}\glspostdescription
}
```

```
\glslongextraSymbolFmt{\langle label \rangle}
```

```
\glslongextraSymbolFmt
```

Governs the way the symbol is displayed.

```
\newcommand{\glslongextraSymbolFmt}[1]{\glossentrysymbol{#1}}
```

```
\glslongextraSymbolTargetFmt{\label}
```

Governs the way the symbol is displayed if it needs to include the target.

```
\newcommand{\glslongextraSymbolTargetFmt}[1]{%
  \glsentryitem{#1}\glstarget{#1}{\glslongextraSymbolFmt{#1}}}
```

```
\glslongextraSymbolOrName{\label}
```

Governs the way the symbol is displayed if it needs to include the target.

```
\newcommand{\glslongextraSymbolOrName}[1]{%
  \ifglsassymbol{#1}%
    {\glslongextraSymbolTargetFmt{#1}}%
    {\glslongextraNameFmt{#1}}%
}
```

```
\glslongextraLocationFmt{\label}{\locationList}
```

Governs the way the location is displayed.

```
\newcommand{\glslongextraLocationFmt}[2]{#2}
```

```
\glslongextraShortTargetFmt{\label}
```

Governs the way the short form is displayed if it needs to include the target.

```
\newcommand{\glslongextraShortTargetFmt}[1]{%
  \glsentryitem{#1}\glstarget{#1}{\glsxtrshort[noindex,hyper=false]{#1}}%
  \glsxtrpostnamehook{#1}}%
```

```
\glslongextraLongFmt{\label}
```

Governs the way the long form is displayed.

```
\newcommand{\glslongextraLongFmt}[1]{%
  \glsxtrlong[noindex,hyper=false]{#1}}\glspostdescription
```

```
\glslongextraSubNameFmt{\level}{\label}
```

Governs the way the child name is displayed. Just does the sub-entry counter, if enabled, and the target.

```
\newcommand{\glslongextraSubNameFmt}[2]{%
  \glssubentryitem{#2}\glstarget{#2}{\strut}%
}
```

```
\glslongextraSubDescFmt{\langle level \rangle}{\langle label \rangle}
```

Governs the way the child description is displayed.

```
\newcommand{\glslongextraSubDescFmt}[2]{%
  \glslongextraDescFmt{#2}%
}
```

```
\glslongextraSubSymbolFmt{\langle level \rangle}{\langle label \rangle}
```

Governs the way the child symbol is displayed.

```
\newcommand{\glslongextraSubSymbolFmt}[2]{%
  \glslongextraSymbolFmt{#2}%
}
```

```
\glslongextraSubSymbolTargetFmt{\langle level \rangle}{\langle label \rangle}
```

Governs the way the child symbol is displayed if the target is required.

```
\newcommand{\glslongextraSubSymbolTargetFmt}[2]{%
  \glssubentryitem{#2}\glstarget{#2}{\glslongextraSymbolFmt{#2}}%
}
```

```
\glslongextraSubSymbolOrName{\langle level \rangle}{\langle label \rangle}
```

Shows the symbol or the name (if the symbol isn't set) as the target for sub-entries.

```
\newcommand{\glslongextraSubSymbolOrName}[2]{%
  \ifglshassymbol{#2}%
  {\glslongextraSubSymbolTargetFmt{#1}{#2}}%
  {\glslongextraSubNameFmt{#1}{#2}}%
}
```

```
\glslongextraSubShortTargetFmt{\langle level \rangle}{\langle label \rangle}
```

Governs the way the short form is displayed if it needs to include the target.

```
\newcommand{\glslongextraSubShortTargetFmt}[2]{%
```

```
\glssubentryitem{#2}\glstarget{#2}{{\glsxtrshort [noindex,hyper=false]{#2}}}%  
\glsxtrpostnamehook{#2}%  
}
```

```
\glslongextraSubLongFmt{\label}
```

\glslongextraSubLongFmt

Governs the way the long form is displayed.

```
\newcommand{\glslongextraSubLongFmt}[2]{\glslongextraLongFmt{#2}}
```

```
\glslongextraSubLocationFmt{\level}{\label}{\location  
list}
```

\glslongextraSubLocationFmt

Governs the way the child location list is displayed.

```
\newcommand{\glslongextraSubLocationFmt}[3]{#3}
```

\glslongextraNameAlign Alignment for the name column.

```
\newcommand{\glslongextraNameAlign}{1}
```

\glslongextraDescAlign Alignment for the description column.

```
\newcommand{\glslongextraDescAlign}{>{\raggedright}p{\glsdescwidth}}
```

\glslongextraSymbolAlign Alignment for the symbol column.

```
\newcommand{\glslongextraSymbolAlign}{c}
```

\glslongextraSymbolNameAlign Alignment for the symbol column when it's being used instead of the name.

```
\newcommand{\glslongextraSymbolNameAlign}{l}
```

\glslongextraLocationAlign Alignment for the location column.

```
\newcommand{\glslongextraLocationAlign}{>{\raggedright}p{\glspagelistwidth}}
```

\glslongextraGroupHeading Used to format the letter group headings. The first argument is the number of columns in the table. The second is the group *label* (not the title).

```
\newcommand{\glslongextraGroupHeading}[2]{}
```

```
\glslongextraSubGroupHeading{\number of columns}{\prev  
group level}{\group  
level}{\parent entry}{\group label}
```

\glslongextraSubGroupHeading

```
\newcommand*{\glslongextraSubGroupHeading}[5]{}
```

\glslongextraHeaderFormat Format for the column headers.

```
\newcommand{\glslongextraHeaderFmt}[1]{\textbf{#1}}
```

```

\glslongextraNameDescHeader
  \newcommand{\glslongextraNameDescHeader}{%
    \glslongextraNameDescTabularHeader\endhead
    \glslongextraNameDescTabularFooter\endfoot
  }

\glslongextraNameDescTabularHeader
  \newcommand{\glslongextraNameDescTabularHeader}{%
    \toprule
    \glslongextraHeaderFmt\entryname &
    \glslongextraHeaderFmt\descriptionname\tabularnewline
    \midrule
  }

\glslongextraNameDescTabularFooter
  \newcommand{\glslongextraNameDescTabularFooter}{%
    \bottomrule
  }

```

Unlike the `altree` style, there aren't different widths for the hierarchical levels.

`\glslongextraSetWidest` Provide in case the tree styles haven't been loaded.

```

\newcommand*{\glslongextraSetWidest}[1]{%
  \def\@glslongextrawidestname{#1}%
}

```

`\@glslongextrawidestname` Pick up the widest name from the `altree` style if it has been set. (Will expand to nothing otherwise.)

```
\newcommand*{\@glslongextrawidestname}{\csuse{@glswidestname}}
```

`\glslongextraUpdateWidest`

```

\newcommand*{\glslongextraUpdateWidest}[1]{%
  \ifundef\@glslongextrawidestname
    {\def\@glslongextrawidestname{#1}}%
  {%
    \glsmeasurewidth{\dimen@}{\@glslongextrawidestname}%
    \glsmeasurewidth{\dimen@ii}{\@glslongextrawidestname}%
    \ifdim\dimen@ii>\dimen@
      \def\@glslongextrawidestname{\@glslongextrawidestname}%
    \fi
  }%
}

```

`\glslongextraUpdateWidestChild{\text{level}}{\text{text}}`

`\glslongextraUpdateWidestChild`

Used by `\glsxtrSetWidest` in `glossaries-extra-bib2gls`. Does nothing by default, since the default action in these styles is to omit the child name. If

the child name should be displayed, then this needs to be redefined to use `\glslongextraUpdateWidest`.

```
\newcommand*{\glslongextraUpdateWidestChild}[2]{}
```

`\glslongextraSetDescWidth` Computes the value of `\glsdescwidth` for the styles that only have name and description columns.

```
\newcommand{\glslongextraSetDescWidth}{%
  \glsmeasurewidth{\gls@tmp[1]}{\glslongextraHeaderFmt\entryname}%
}
```

Has the widest name been set.

```
\glsmeasurewidth{\dimen@}{\glsnamefont{\glslongextrawidestname}}%
\ifdim\dimen@>\gls@tmp[1]
  \gls@tmp[1]=\dimen@
\fi
```

Description width is `\linewidth` less `4\tabcolsep` less the width of the name column.

```
\setlength{\glsdescwidth}{\dimexpr\linewidth-4\tabcolsep-\gls@tmp[1]}%
```

`\glslongextraSymSetDescWidth` Computes the value of `\glsdescwidth` for the styles that only have name, symbol and description columns.

```
\newcommand{\glslongextraSymSetDescWidth}{%
```

Work out the size for just the name and description style.

```
\glslongextraSetDescWidth
```

Now work out the symbol column width. This is assuming that the column title will be the widest text in the column.

```
\glsmeasurewidth{\gls@tmp[1]}{\glslongextraHeaderFmt\symbolname}%
```

Subtract `2\tabcolsep` and the symbol header width.

```
\setlength{\glsdescwidth}{\dimexpr\glsdescwidth-2\tabcolsep-\gls@tmp[1]}%
```

`\glslongextraSymNoNameSetDescWidth` Computes the value of `\glsdescwidth` for the styles that only have symbol and description columns.

```
\newcommand{\glslongextraSymNoNameSetDescWidth}{%
```

Now work out the symbol column width. This is assuming that the column title will be the widest text in the column.

```
\glsmeasurewidth{\gls@tmp[1]}{\glslongextraHeaderFmt\symbolname}%
```

Subtract `4\tabcolsep` and the symbol header width.

```
\setlength{\glsdescwidth}{\dimexpr\linewidth-4\tabcolsep-\gls@tmp[1]}%
```

`\glslongextraLocSetDescWidth` Computes the value of `\glsdescwidth` for the styles that only have name, location and description columns.

```
\newcommand{\glslongextraLocSetDescWidth}{%
```

Work out the size for just the name and description style.

```
\glslongextraSetDescWidth
```

Subtract 2\tabcolsep and the location list column width.

```
\setlength{\glsdescwidth}{\dimexpr\glsdescwidth-2\tabcolsep-\glspagelistwidth}%
}
```

`\glslongextraSymLocSetDescWidth` Computes the value of `\glsdescwidth` for the styles that have name, symbol, location and description columns.

```
\newcommand{\glslongextraSymLocSetDescWidth}{%
```

Work out the size for just the name, symbol and description style.

```
\glslongextraSymSetDescWidth
```

Subtract 2\tabcolsep and the location list column width.

```
\setlength{\glsdescwidth}{\dimexpr\glsdescwidth-2\tabcolsep-\glspagelistwidth}%
}
```

`\glslongextraShortNoNameSetDescWidth` Computes the value of `\glsdescwidth` for the styles that only have short and long columns. The long form will essentially be treated like a description column.

```
\newcommand{\glslongextraShortNoNameSetDescWidth}{%
```

Now work out the short column width. This is assuming that the column title will be the widest text in the column.

```
\glsmeasurewidth{\gls@tmpplen}{\glslongextraHeaderFmt\glslongextraShortHeader}%

```

Subtract 4\tabcolsep and the above header width.

```
\setlength{\glsdescwidth}{\dimexpr\linewidth-4\tabcolsep-\gls@tmpplen}%
}
```

`\ifGlsLongExtraUseTabular` If true use `tabular` instead of `longtable`. Obviously only intended for short glossaries that can fit into a single page.

```
\newif\ifGlsLongExtraUseTabular
\GlsLongExtraUseTabularfalse
```

`\glslongextraTabularVAlign` Only used with the `tabular` setting.

```
\newcommand*{\glslongextraTabularVAlign}[1]{#1}
```

`\long-name-desc` Two column style with multi-lined descriptions and header. This is similar to the `longragged-booktabs` style.

```

\DeclareCurrentRelease{v1.52}{2023-06-28}
```

Declare package:

```
\ProvidesPackage{glossary-topic}[2023/06/28 v1.52 (NLCT)]
```

Load required package.

```
\RequirePackage{multicol}
```

The top-level entries act like headers. If the top-level entry has a description it's placed below the name.

```
topic
\newglossarystyle{topic}{%
  \renewenvironment{theglossary}%
  {}%
  \glstopicInit
  \def\glstopic@prechildren{}%
```

```

\def\glstopic@prevlevel{-1}%
}%
{\par}%
\renewcommand*\glossaryheader{}%
\renewcommand*\glsgroupheading}[1]{%
\def\glstopic@prevlevel{-1}%
\glstopicGroupHeading{##1}%
}%

```

Sub-groups are only supported with `\printunsrtglossary`.

```

\renewcommand*\glssubgroupheading}{\glstopicSubGroupHeading}%
\renewcommand*\glossentry}[2]{%
\hangindent0pt\relax
\parindent\glstopicParIndent\relax
\glstopicItem{##1}{##2}%

## 8 table styles (**glossary-table.sty**)

Intended for use with `bib2gls`. This is still experimental.

```
\NeedsTeXFormat{LaTeXe}
```

Declare package:

```
\ProvidesPackage{glossary-table}[2023/06/28 v1.52 (NLCT)]
```

Load required packages.

```
\RequirePackage{longtable}
\RequirePackage{array}
\RequirePackage{booktabs}
```

Check if `\gls@start@measuring` has been defined (introduced to `glossaries` v4.51). This package also requires `\ifglsfieldvoid` which was added to `glossaries` v4.50.

```
\ifdef\gls@start@measuring
{%
{\PackageError{glossary-table}%
{glossaries.sty v4.51+ required. Please update glossaries.sty}%
{Your version of glossaries.sty is too old. Minimum version 4.51 required}}
}
```

`\glstableblockperrowcount` Number of blocks (entries) per row.

```
\newcount\glstableblockperrowcount
\glstableblockperrowcount=2\relax
```

Add a key to allow this value to be changed.

```
\define@key{printglosstable}{blocks}{\glstableblockperrowcount=#1\relax}
```

```

\glstablecurrentblockindex Keep track of current block (entry) index.
    \newcount\glstablecurrentblockindex

\glstabletotalcols Total number of columns. This will be updated at the start of \printunsrtable,
but is a user level command so that it can be used in any hooks.
    \newcount\glstabletotalcols
    \glstabletotalcols=4\relax
